## Commanding and Signaling Devices

## Introduction

## Overview

Using a special F adapter, EMERGENCY-STOP devices according to ISO 13850 can be directly connected through the standard AS-Interface with safety-oriented communication.

AS-Interface enclosures and front panel modules
For customized enclosures with connection to AS-Interface, see Catalog IK PI.

For front panel modules with one 4I/4O slave for connection of four 3SB3 control devices, see Catalog IK PI.

## Commanding and Signaling Devices

Introduction

## 3SB2 Pushbuttons and Indicator Lights, 16 mm

## General data

## Overview

The 3SB2 pushbuttons and indicator lights are provided for front plate mounting and rear connection with flat connectors. For use on printed circuit boards, contact blocks and lampholders with solder pins are also available.

## Standards

IEC 60947-5-1, EN 60947-5-1 (VDE 0660 Part 200), IEC 60947-5-5, EN 60947-5-5 (VDE 0660 Part 210) for EMERGENCY-STOP mushroom pushbuttons.

Version with flat connector

## For PCB mounting

For use on printed circuit boards, special contact blocks and lampholders for soldering into the printed circuit board are available. For this purpose, the blocks are fitted with $0.8 \mathrm{~mm} \times 0.8 \mathrm{~mm}$ solder pins of length 3.5 mm .

## Design

## Design versions

Two design versions can be mounted:

- Round design: The 3SB2 pushbuttons and indicator lights are assembled with the modules - actuator, holder, contact block and lampholder. Depending on the specific application, various versions can be assembled. Complete units are offered for the most commonly used applications.
- Square design: With square, black frames the round units can be given a square look. The frames are inserted underneath the round actuators. Further mounting is the same as for the round version.

## Mounting and fixing

Mounting dimensions according to EN 50007 (not applicable to EMERGENCY-STOP mushroom pushbuttons):

| Minimum spacing | a | b |
| :--- | :--- | :--- |
| Round version | 19 | 19 |
| Square version <br> without inscription label | 21 | 21 |
| Round and square version <br> with inscription label | 21 | 32 |
| For 2 selector switches with 3 switch positions, <br> latching, side by side | 21 | 21 |

For mounting, the actuator or the lens assembly is inserted from the front into the hole in the front plate. Four small nubs ensure a secure fitting in the hole. The holder is plugged on the actuator or the lens assembly from behind and automatically snaps into place. The module is screwed down tightly with 2 screws on the holder and thus levels panel thickness from 1 to 6 mm .
One or two contact blocks can be mounted on the holder. They are inserted into the holder with slide slots and held down with two snap brackets.
If a command position is fitted with an indicator light or illuminated pushbutton, a lamp socket with lampholder must be used instead of a holder. It is suitable for incandescent lamps or LEDs with bases of type W2 $\times 4.6 \mathrm{~d}$.

## Terminals

The contact blocks and the lampholder are equipped with flat connectors acc. to IEC 60760 which can also be used as solder connections.

To permit through-connection, all terminals are provided with two tabs.

## For PCB mounting

The command position comprises the actuator, e. g. 3SB2 pushbutton, illuminated pushbutton or indicator light, which is mounted in the front plate, and a contact block and a lampholder which are soldered to the PCB. For this purpose, the contact blocks and lampholders are fitted with $0.8 \mathrm{~mm} \times 0.8 \mathrm{~mm}$ solder pins of length 3.5 mm .

## Mounting and fixing

Mounting dimensions according to EN 50007.
The actuators are mounted in the same way as 3SB2 front plate mounting devices.
The contact blocks and lampholders are plugged into the printed circuit board by means of their solder pins and can be flowsoldered. After soldering, the devices must be flush with the board and perpendicular to it. The printed circuit board must be supported on spacing bolts so that it cannot sag or bend more than 0.1 mm .

Illuminated pushbutton with solder pin connection
To avoid bending the PCB when the pushbuttons are operated, sufficient spacing bolts must be provided as shown in the table below:

| PCB thickness | Max. distance between <br> spacing bolts |
| :--- | :--- |
| 1.5 mm | 80 mm |
| 2.5 mm | 150 mm |
| When using EMERGENCY-STOP pushbuttons | always 50 mm |

When using EMERGENCY-STOP pushbuttons always 50 mm
These details are based on epoxy resin glass fiber mat.

Solder pin spacing

## General data

## Overview

Front plate mounting

Use on printed circuit boards

## Design

The 3SB3 series is a modular range of commanding and signaling devices for front panel mounting and rear conductor connection. As an alternative, individual elements can also be supplied for use on printed circuit boards. Complete units are offered for the most commonly used applications.

The 3SB3 series is available:

- Made of molded plastic in flat, round and square design
- Made of metal in round design.

The devices are of modern industrial design and can be mounted rapidly by a single person. The operating surfaces of the pushbuttons and illuminated pushbuttons are concave. The lenses of the indicator lights are convex.
The metal version with a high degree of protection according to IP67 and NEMA 4 is available for the world market.
One command point comprises:

- An actuator or lens assembly in front of the control panel
- A holder for mounting behind the control panel
- Up to 3 contact blocks and/or 1 lampholder behind the control panel
- A comprehensive range of accessories for inscription

Two contact blocks can be snapped onto the actuator in the standard version.
When three contact blocks or illuminated actuators are required, an additional holder must be plugged onto the actuator from the rear.

- 3SB39 01-0AB holder for 3 contact blocks or for 2 contact blocks and 1 lampholder
- 3SB39 01-0AC holder with pressure plates for actuating a central contact block when using a selector switch, key-operated switch and twin pushbutton with 3 contact blocks.
For illuminated pushbuttons, illuminated switches and illuminated selector switches the holder is included in the scope of supply as standard.

## Standards

IEC 60947-1, EN 60947-1.
IEC 60947-5-1, EN 60947-5-1,
IEC 60947-5-5, EN 60947-5-5
for EMERGENCY-STOP mushroom pushbuttons.

## "Intrinsic safety" type of protection EEx i according to ATEX directive 94/9/EC

The pushbuttons and indicator lights in round design can also be used in hazardous areas. The 3SB34 ..-0. contact blocks and the 3SB34 ..-1A lampholders (with 3SB39 01-1.A LED lamp) with screw terminals or spring-type terminals can be used.
See Catalog LV 1, Chapter 20 "Appendix" --> "Standards and approvals" --> "Type overview of approved devices for potentially explosive areas (ATEX explosion protection)".

## Connection methods

The devices are available with screw terminals (box terminals), spring-type terminals or solder pins.
Screw terminals
Spring-type terminals
These connections are indicated in the Technical
specifications by orange backgrounds.

## General data

## Design

## Holder

The holders are used for mounting the actuating or signaling elements and are plugged into the rear of the front plate.
The holder for the round versions is set to a control panel thickness of 1 to 4 mm when delivered and is placed in the direction of the arrow $\uparrow 1-4 \mathrm{~mm} \uparrow$ on the actuator/indicator from the back. The fixing screw is located underneath, on the right.
For a switchboard thickness of 3 to 6 mm , the holder is reversed and mounted in the direction of the arrow at $\uparrow 3-6 \mathrm{~mm} \uparrow$ and the fixing screw is located on the upper right. In this case, the fixing screw must be rotated anticlockwise to its limit before mounting the holder.
The control panel thickness of 1 to 4 mm can be compensated with the holder for the square version.
When label holders, protective caps or similar accessories are used, the greatest permissible control panel thickness must be reduced by the wall thickness of the accessory part.

## Contact blocks and lampholders

The contact blocks are fitted with a slow-action contact (1 NO contact or 1 NC contact) with double operating contacts. These ensure a high switching reliability even with small voltages and currents, such as $5 \mathrm{~V} / 1 \mathrm{~mA}$. They are suitable for use in solidstate systems as well as conventional controls.

The switch contacts of the NC contact are positively driven.
For illuminated elements, lampholders with an integrated LED or with a base for replaceable bulbs can be supplied.
Contact blocks and lampholders feature terminal designations according to EN 50013.

## Mounting

The 3SB3 devices can be easily and quickly mounted:

- Actuators or indicator lights are positioned in the opening of the front panel from the front
- Position the holder from the rear
- Tighten the screw on the holder
- Snap on the contact block or the lampholder directly onto the actuator from the back

## Connection methods

The following devices are available:

- Screw terminal (box terminals)
- Spring-type terminals or
- Solder connections ( $0.8 \mathrm{~mm} \times 0.8 \mathrm{~mm}$ solder pins)

The devices with screw terminals have open terminals, screws that cannot be lost, funnel-shaped cable entries and screwdriver fed openings, all of which saves time when connecting and enables the use of motorized screwdrivers.
The devices with spring-type terminals can be connected quickly and tightly, and when single-pole blocks are used the command point can be butt-mounted.

## Inscriptions

Direct inscription using a laser or by means of insert labels or name plates.
For applications requiring less robustness there is the Label Designer software and corresponding labels. The user can use these to create his own inscriptions with text or symbols.

## Enclosure

Plastic and metal enclosures with 1, 2, 3, 4 or 6 command points are available for the round design. Enclosures with more than 6 command points can be supplied upon request. They are suitable for the round and square design.

## Overview

Enclosed pushbuttons and indicator lights are used as hand operated control devices for separately allocated control units and cabinets. The devices are suitable for use in any climate.
Enclosures with handle are available for suspension (e. g. for crane control units).
The enclosed pushbuttons and indicator lights are available with conventional controls as well as for connection to the
AS-Interface bus system.
The following versions are available:

- Enclosure with standard fittings with 1 to 3 command points
- Enclosure with customized equipment with 1 to 6 command points
- Empty enclosures (individual parts must be ordered separately).

## Customer-specific enclosures

On request enclosures with more than 6 command points can also be supplied with AS-Interface connection.
For fully equipped AS-Interface enclosures, see Catalog IK PI.

## Enclosures with standard fittings

A Top part of enclosure
B Inscription labels
C1 Pushbutton
C2 Indicator light
D Holder
E Contact designations
F Contact blocks, lampholders for floor mounting
G Bottom part of enclosure
H Identification letters for the command points
I Identification number

## Standards

IEC 60947-5-1 (VDE 0660 Part 200).

## Enclosures

## General data

## Design

Enclosure
Plastic and metal enclosures with 1, 2, 3, 4 or 6 command points are available. The mounting holes are located external to the terminal compartment.
Cable routing: on the top and bottom narrow ends of the enclosure for an M20 or M25 metric cable gland.
Enclosure color:

- Cover: RAL 7035 (light gray),
- For EMERGENCY-STOP: RAL 1004 (yellow),
- Base: RAL 9005 (black).

The plastic enclosures comply with the "total insulation" protective measure.

## Actuators

Round actuators and lens assemblies for a nominal diameter of 22 mm can be used.
The actuators are fitted through the hole in the cover of the enclosure and are connected to the holder supplied with the actuator and secured in position.
Plastic enclosures are equipped as standard with actuators and indicators made of plastic, metal enclosures are equipped with actuators and indicators made of metal.

## Contact blocks and lampholders

Contact blocks and lampholders for floor mounting are snapped into the bottom part of the enclosure. For each command points, the following components can be fitted:

- 3 contact blocks or
- 2 contact blocks + 1 lampholder or lampholder with integrated voltage reducer.

The contact blocks have moving double-break contacts and therefore a high contact stability, i. e. they are also suitable for operation in solid-state controls. Function numbering is shown on the contact block.
Single-pole contact blocks and lampholders for front plate mounting can also be used.

## Overview

Distributed command devices of the 3SB3 series can be quickly connected to the AS-Interface using AS-Interface enclosures. Using suitable components you can make your own enclosures with integrated AS-Interface or flexibly modify existing enclosures.

## EMERGENCY-STOP enclosures

## Equipment

The enclosures with integrated AS-Interface are equipped with contact blocks and LED lampholders with spring-type connections from the 3SB3 series along with the slave(s) required to connect the contact blocks and lampholders to AS-Interface.
AS-Interface modules, cable sets and a connection element are required in addition to connect the contact blocks and LED lampholders.

## Installation of AS-Interface slaves

The following slave types are available for connecting the command points:

- Slave in A/B technology with 4 inputs and 3 outputs
- Slave with 4 inputs and 4 outputs
- F slave with 2 safe inputs for EMERGENCY-STOP

The following table shows the maximum number of equippable slaves:

| Enclosures for | Number of slaves <br> for enclosures <br> without EMERGENCY <br> STOP | Number of slaves <br> for enclosures <br> with EMERGENCY STOP |
| :--- | :--- | :--- |
| 1 command <br> point | Not available | $1 \times$ F slave |
| 2 command <br> points | $1 \times$ slave $4 \mathrm{I} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}$ | Not available |
| 3 command <br> points | $1 \times$ slave $4 \mathrm{I} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}$ | $1 \times$ slave $4 \mathrm{I} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}+$ <br> $1 \times \mathrm{F}$ slave |
| 4 command <br> points | $2 \times$ slave $4 \mathrm{II} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}^{1)}$ | $2 \times$ slave $4 \mathrm{I} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}+$ <br> $1 \times \mathrm{F}$ slave 1$)$ |
| 6 command <br> points | $2 \times$ slave $4 \mathrm{II} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}$ | $2 \times$ slave $4 \mathrm{II} / 4 \mathrm{O}$ or $4 \mathrm{I} / 3 \mathrm{O}+$ <br> $1 \times \mathrm{F}$ slave |

1) For metal enclosures with 4 command points, only $1 \times$ slave $4 \mathrm{I} / 4 \mathrm{O}$ or 4/3O is possible.

## Connection

One set of links is required in each case to connect a slave to contact blocks, to lampholders and to the connection element.
The connection elements are mounted in the front-end cable glands and are used for connection of the AS-Interface or for bringing unused inputs or outputs out of the enclosure.
For connection to the AS-Interface bus there is a choice of the following options:

- Terminal for shaped AS-Interface cable. The cable is contacted by the insulation piercing method and routed past the enclosure on the outside (possible only with plastic enclosure).
- Cable gland for the shaped AS-Interface cable or round cable. The cable is routed into the enclosure (preferable for metal enclosure).
- Connection using M12 plug.

If less than all inputs/outputs of the installed slaves in an enclosure are used for connecting the command devices, free inputs and outputs can be routed on request to the outside through an M12 socket on the top or bottom side of the enclosure.

To supply inputs with power, the S+ connection of the must be assigned to the socket, for outputs the OUT- connection must be assigned.
Addressing is performed using the AS-Interface connections or the integrated addressing socket. An external power supply is not required.

Example for lamp test circuit with 3SB34 00-2A element

3SB34 00-1G lampholder
for incandescent lamps, maximum 2.6 W or LED lamps, AC/DC

3SB34 00-1H lampholder
for incandescent lamps, maximum 2.6 W or glow lamps, AC
Application examples for 3SB34 00-2A diode elements

- Lamp test circuit
- Interference suppression
- Limiting voltage peaks
- Limiting DC coils
- Diode gates
- Rectifier circuits

The diode element contains two 1 N 4007 diodes. The element can be snapped onto the holder as required.

Notes on using the lampholders with separate lamp test function

For connecting inductive loads in parallel (e. g. contactors), overvoltage damping is necessary.
The 3SB34 00-1H element is not suitable for operation with a parallel load.

## Overview

Two-hand operation console with metal enclosure
The two-hand operation consoles are required for use with machines and systems that have hazardous areas, in order to direct both hands of the operator to one position.

## Standards

The two-hand operation consoles comply with the requirements of EN 574 .

For technical specifications, see 3SB3 Pushbuttons.

## Design

## Equipment

The two-hand operation consoles are pre-equipped with 3SB3 command devices. In the case of plastic enclosures the command points are equipped as standard with actuators and indicators made of plastic, in the case of metal enclosures they are equipped with actuators and indicators made of metal.
The standard equipment comprises:

- 2 black mushroom pushbuttons, $\varnothing 40 \mathrm{~mm}, 1 \mathrm{NO}+1 \mathrm{NC}$, Order No. 3SB30 00-1GA11 or 3SB35 00-1GA11
- 1 red EMERGENCY-STOP mushroom pushbutton according to EN ISO 13850, $\varnothing 40 \mathrm{~mm}$, with positive latching, 2 NC, Order No. 3SB30 00-1HA2O or 3SB35 00-1HA20

The metal version is also available as an unequipped empty enclosure.
The plastic version can be retrofitted with up to 8 customized command points. The surface of the console has premachined breaking points for this purpose.

## Mounting

The two-hand operation consoles can be mounted either on the stand available or directly on the machine by means of the holes in the rear panel.

## Function

The control command is given by pressing the two mushroom pushbuttons on the sides simultaneously (within 0.5 s of each other) and must be maintained for as long as a hazard exists.
For evaluation of the control commands, the associated 3TK28 34 press control devices are offered as two-hand control devices and the 3TK28 35 is offered as a slowing down test apparatus in relay design (see Safety Relays in Chapter 7).

## Metal enclosures

## Overview

SIRIUS cable-operated switches (trip-wire switches) are used for monitoring or for EMERGENCY-STOP devices on particularly endangered system sections.
As the effective range of a cable-operated switch is only limited by the length of the trip-wire, large systems can also be protected. Cable-operated switches (requiring pulling at both ends) and conveyor belt unbalance trackers are used primarily for monitoring very long belt systems.

## Standards

The switches are equipped with positive latching and positive NC contacts and are thus suitable for operation in EMERGENCYSTOP devices in accordance with EN ISO 13850.

## Design

The switches for wire lengths up to 50 m are available with $1 \mathrm{NO}+1 \mathrm{NC}$ or 2 NC contacts and for up to 75 m with $1 \mathrm{NO}+3 \mathrm{NC}$ contacts. The switches for wire lengths of $2 \times 75 \mathrm{~m}$ and the conveyor belt unbalance trackers are supplied with $2 \mathrm{NO}+2 \mathrm{NC}$ contacts.
The cable-operated switch and the conveyor belt unbalance tracker can also be supplied with a factory-fitted LED (red, $24 \vee D C$ ). This light in innovative on-board chip technology allows the operating state of the switch to be visible at a distance of at least 50 m .

## Function

The NC contacts of the cable-operated switch and the conveyor belt unbalance tracker are positive opening.

Cable-operated switches with one-side operation are held in free position by the pre-tension on the turnbuckle.

In the 3SE7 140 and 3SE7 150 cable-operated switches, both switching contacts are available for wire-break/wire-pull signaling. The NO contact can be used, for example, for signaling purposes.
On switches with interlocking, with a pretensioned wire, the locking must be deactivated beforehand in order to return the ca-ble-operated switch to its original position.

## Technical specifications

## Configuration

Mounting and fixing the wire
Short lengths of the wire up to 25 m

Long lengths of the wire up to 50 m

Pulling from both sides up to $2 \times 75 \mathrm{~m}$

## Preloading and actuating forces

The values quoted apply to switch mounting at an ambient temperature of $20^{\circ} \mathrm{C}$. No allowance is made for lengthening of the wire through stretching and deformation of the wire eye.

| Type | Preloading <br> force | Operating <br> distance <br> cm | Actuating <br> force ${ }^{\text {1 }}$ | Max. wire <br> length |
| :--- | :--- | :--- | :--- | :--- |

## Overview

Foot switches with metal enclosures
The 3SE2 9 and 3SE3 9 foot switch range encompasses versions in a metal enclosure for rugged applications as well as
versions with plastic enclosure. The devices can be supplied with or without a cover and have fixing holes for them to be screwed to the floor.

Depending on the particular application, the switches can be ordered in latching or momentary-contact versions.

## Safety foot switches

The single-pedal safety foot switches according to EN ISO 13850 lock on actuation. After eliminating the hazard, the machine can only be restarted after manually releasing the switch. A pushbutton on the top of the enclosure is used for this purpose. The devices are supplied with a cover.
Version with plastic enclosure
For operation in less harsh environments, momentary-contact pedal switches with plastic enclosures are available. They are supplied in single-pedal and two-pedal versions, the single-pedal version is also available with a cover. The momentary-contact pedal switch has one microswitch (changeover contact) per actuating pedal.

## 8WD4 Signaling Columns

## General data

## Overview

The 8WD4 signaling columns are flexible in design and versatile in use.

8 WD42 signaling columns (width 50 mm ) with up to 4 elements

8WD44 signaling columns (width 70 mm ) with up to 5 elements

## General data

Two product series are available:

- 8WD42
- Thermoplast enclosure, diameter 50 mm
- Degree of protection IP54
- Up to 4 elements can be mounted
- 8WD44
- Thermoplast enclosure, diameter 70 mm
- Advanced design and significantly improved illumination
- Fast and flexible connection using spring-type terminals
- Integrated degree of protection IP65
- Up to 5 elements can be mounted

Signaling columns, mounting examples
The illustrated examples are from the left:

- 8WD42: Cover (no No.), 4 light elements (2), connection element (4), pipe (8), foot (7)
- 8WD44: Cover (no No.), acoustic element (1), 2 light elements (2), connection element (6), foot with pipe (12)
- 8WD44: Cover (no No.), 4 light elements (2), GSM radio element (4), connection element (5), bracket for wall mounting (9)
- 8WD44: Cover (no No.), 3 light elements (2), AS-Interface adapter element (3), connection element (6), foot with pipe (12)
Note: The cover is supplied with the connection element.

## Design

8WD4 signaling columns can be combined as required as modular components and are available in two diameters, 50 mm and 70 mm .

## Signaling elements

The separate signaling elements are mechanically joined with a bayonet mechanism for electrical reliability and vibration resistance. Tools are not required. Up to five signaling elements (four in the case of 8WD42) can be connected to one connection element. The bracket for two-sided mounting permits, in the case of the 8WD44 signaling columns, the installation of two connection elements and therefore up to ten signaling elements in a single location.

Signaling elements are available in the following versions:

- Continuous light element (incandescent lamp, LED)
- Blinklight element (incandescent lamp, LED)
- Flashlight element
- Rotating-beacon element (LED)
- Buzzer element
- Siren element

The tone of the buzzer element can be altered as desired between a pulsating and a continuous tone by means of a wire bridge in the buzzer element.

The amplification of the siren element can be selected in the 100 dB version via an integrated potentiometer. It is possible to set 8 sounds using a DIP switch.

## Mounting

## Floor mounting

The 8WD42 signaling columns are mounted on the floor with a 8WD42 08-0DE plastic foot.
The 8WD44 signaling columns can be directly screwed onto the connection element for floor mounting.

## Pipe mounting

Pipes are available in various lengths from 150 mm to 1000 mm . A special molded foot is recommended for pipes of more than 500 mm in length to improve stability.

## Angle mounting

The supplementary component for mounting at a $90^{\circ}$ angle, e. g. to walls, is directly attached to the connection element. A special connection element for angle mounting is required for the 8WD44 signaling columns.

## Single-hole mounting

The 8WD42 signaling columns can be fixed using a drilled hole using the adapter for single-hole mounting. It is screwed in place from below.

## Magnetic fixing

The adapter with the sideways cable outlet can also be ordered with magnetic fixing as a special version. This offers easy, flexible mounting on metal plates or panels which is also extremely resistant to shocks.

## General data

## Connections

The signaling elements are wired up using the screw terminals in the connection element, screw terminals on the 8WD42 and screw or spring-type terminals on the 8WD44.

## Cable outlet

The connecting cables can be guided either downwards or sideways through the cable gland using an adapter that can be screwed under the foot. This makes wiring easier if there is no access from below.
Connection to AS-Interface

## 8WD42:

The two-wire bus cable is fixed to the screw terminals in the connection element. The adapter element must be the first module to be positioned on the connection element. A maximum of 4 signaling elements can then be mounted on it.
The 8WD42 28-0BB adapter element is a standard slave.

## 8WD44:

The two-wire bus cable is fixed to the screw or spring-type terminals in the connection element. The adapter element must be the first module to be positioned on the connection element. The signaling elements can then be mounted on it.
The 8WD44 28-0BE adapter element is a standard slave. A maximum of 4 signaling elements can be mounted on it.

The 8WD44 28-0BD adapter element with A/B technology enables the connection of up to 62 slaves on one AS-Interface system. The addressing socket provides user-friendly parameterization of the AS-Interface elements. A maximum of 3 signaling elements can be mounted on this element.

## Function

## GSM radio elements

Downtimes can be minimized with the 8WD44 GSM radio element. Faults are signaled within seconds over a mobile phone from any place at any time.
The radio element is integrated below the light elements in the signaling column and can be quickly commissioned and easily operated:

- Insert SIM card in the radio element
- Call the radio element with the receiver's mobile phone
- Start the monitoring

Each module can have up to three different call numbers. In addition to using the SMS function the receiver can obtain information about the current state of the machines or plants by call, fax or e-mail service (through the provider) or he can perform remote diagnostics by mobile phone.
The alarm function of the radio element can be switched on or off at any time:

- By calling the radio element
- By sending an SMS with the corresponding commands
- By operating an input in "External Control" mode

The radio elements can also be connected to an AS-Interface module with an external power supply.

Technical specifications

Overview

Features:

- Thermoplast enclosure, diameter 70 mm
- Degree of protection IP65
- Rated voltage $24 \mathrm{~V}, 115 \mathrm{~V}, 230 \mathrm{~V}$ AC/DC

## Design

8WD53 integrated signal lamps can be mounted directly at any point of the machine for the purpose of giving visual signals. They are mounted by means of a Pg 29 screw base with nut.
All integrated signal lamps have a high degree of protection IP65 and are made of a material highly resistant to impact.

The special shape of the integrated signal lamps means that the light is emitted optimally in every direction (to the sides and upwards). Continuous lights (with incandescent lamp or LED) and single-flash lights are available in the following colors: red, green, yellow, clear and blue.

The LED versions of the integrated signal lamps offer a considerably longer endurance than the incandescent lamp versions. LED lights are available as a continuous light, repeated-flash light and rotating light.
