Answers for industry.

Siemens Industry answers the challenges in the manufacturing and the process industry as well as in the building automation business. Our drive and automation solutions based on Totally Integrated Automation (TIA) and Totally Integrated Power (TIP) are employed in all kinds of industry. In the manufacturing and the process industry. In industrial as well as in functional buildings.

Siemens offers automation, drive, and low-voltage switching technology as well as industrial software from standard products up to entire industry solutions. The industry software enables our industry customers to optimize the entire value chain – from product design and development through manufacture and sales up to after-sales service. Our electrical and mechanical components offer integrated technologies for the entire drive train – from couplings to gear units, from motors to control and drive solutions for all engineering industries. Our technology platform TIP offers robust solutions for power distribution.

The high quality of our products sets industry-wide benchmarks. High environmental aims are part of our eco-management, and we implement these aims consistently. Right from product design, possible effects on the environment are examined. Hence many of our products and systems are RoHS compliant (Restriction of Hazardous Substances). As a matter of course, our production sites are certified according to DIN EN ISO 14001, but to us, environmental protection also means most efficient utilization of valuable resources. The best example are our energy-efficient drives with energy savings up to 60 %.

Check out the opportunities our automation and drive solutions provide. And discover how you can sustainably enhance your competitive edge with us.

TIA is characterized by its unique continuity.

It provides maximum transparency at all levels with reduced interfacing requirements – covering the field level, production control level, up to the corporate management level. With TIA you also profit throughout the complete life cycle of your plant – starting with the initial planning steps through operation up to modernization, where we offer a high measure of investment security resulting from continuity in the further development of our products and from reducing the number of interfaces to a minimum.

The unique continuity is already a defined characteristic at the development stage of our products and systems.

The result: maximum interoperability – covering the controller, HMI, drives, up to the process control system. This reduces the complexity of the automation solution in your plant. You will experience this, for example, in the engineering phase of the automation solution in the form of reduced time requirements and cost, or during operation using the continuous diagnostics facilities of Totally Integrated Automation for increasing the availability of your plant.

Thanks to Totally Integrated Automation, Siemens provides an integrated basis for the implementation of customized automation solutions – in all industries from inbound to outbound.

Electrical power distribution requires integrated solutions. Our answer: Totally Integrated Power (TIP). This includes tools and support for planning and configuration and a complete, optimally harmonized product and system portfolio for integrated power distribution from medium-voltage switchgear right to socket outlets.

The power distribution products and systems can be interfaced to building or industrial automation systems (as part of Total Building Solutions or Totally Integrated Automation) via communication capable circuit breakers and modules, allowing the full potential for optimization that an integrated solution offers to be exploited throughout the product cycle – from planning right through to installation and operation.

Thanks to a comprehensive energy management system, power flows can be made transparent and the energy consumption of individual loads can be calculated and allocated. Building operators can thus identify power-intensive loads and implement effective optimization measures. With its products and systems, Totally Integrated Power forms the basis for this functionality and guarantees greater cost-efficiency in industrial applications, infrastructure and buildings.

Much more than a catalog. The Industry Mall.

You have a catalog in your hands that will serve you well for selecting and ordering your products. But have you heard of the electronic online catalog (the Industry Mall) and all its benefits? Take a look around it sometime:

www.siemens.com/industrymall

Selecting

Find your products in the structure tree, in the new "Bread-crumb" navigation or with the integral search machine with expert functions. Electronic configurators are also integrated into the Mall. Enter the various characteristic values and the appropriate product will be displayed with the relevant order numbers. You can save configurations, load them and reset them to their initial status.

Ordering

You can load the products that you have selected in this way into the shopping basket at a click of the mouse. You can create your own templates and you will be informed about the availability of the products in your shopping cart. You can load the completed parts lists directly into Excel or Word.

Delivery status

When you have sent the order, you will receive a short e-mail confirmation which you can print out or save. With a click on "Carrier", you will be directly connected to the website of the carrier where you can easily track the delivery status.

Added value due to additional information

So you have found your product and want more information about it? In just a few clicks of the mouse, you will arrive at the image data base, manuals and operating instructions. Create your own user documentation with My Documentation Manager.
Also available are FAQs, software downloads, certificates and technical data sheets as well as our training programs. In the image database you will find, depending on the product, 2D/3D graphics, dimension drawings and exploded drawings, characteristic curves or circuit diagrams which you can download.

Convinced? We look forward to your visit!

Your requirements

Do you want to bring new products quickly onto the market? And at the same time be flexible and in a position to change your product range at short notice and shorten your time-to market? Do you want to be able to manufacture efficiently at low costs? And at the same time optimize the capacity of your plant/machine and minimize possible downtimes?

Then all the machines in your plant should work together perfectly. Therefore, you rely upon open, integrated automation communication not just within the whole company but also for external communication. Avoid isolated automation and information technology solutions by assuring:

- Continuous flow of information from the actuator/sensor level through to the corporate management level

- Availability of information at any location

- High-speed data exchange between the different plant sections

- Easy, plant-wide configuration and efficient diagnostics

- Integrated security functions that block unauthorized access

- Fail-safe and standard communication via the same connection

Our range

Communication networks are of utmost importance for automation solutions. SIMATIC NET – Networking for Industry – stands for a diverse range of modular blocks – Designed for Industry – which contribute to efficiently solving your communications tasks:

- In the different automation areas

- Across the entire workflow

- For the complete plant life cycle

- For all industries

SIMATIC NET offers solutions which both maximize the benefits of Ethernet and simply integrate fieldbus systems. Noticeable examples are:

- The development of the field level for the use of Industrial Ethernet

- Complete integration from the field level to the corporate management level

- The implementation of new solutions by means of mobile communication

- The integration of IT technologies

Worldwide trends

Decentralization has been gaining worldwide importance for a number of years now. A distributed plant structure can reduce installation, maintenance and diagnostics costs. This involves intelligent devices working locally and being connected together across networks. Openness and flexibility are important in order to expand existing setups and to connect up different systems. For this reason, international committees define and standardize the standards for bus systems.

PROFINET/Industrial Ethernet	
Industrial Ethernet (IEEE 802.3)	- the industrial standard based on the international Ethernet standard
PROFINET (IEC 61158/61784)	- the leading Industrial Ethernet standard for automation
Industrial Wireless LAN (IEEE 802.11)	- the industrial standard for wireless communication based on the international standard
PROFIBUS	
PROFIBUS (IEC 61158/61784)	- the international standard for the field level is the global market leader among fieldbus systems
AS-Interface	
AS-Interface (IEC 62026-2/ EN 50295)	- the international standard, which, as an economical alternative to the cable harness, links sensors and actuators by means of a two-wire line.
IO-Link	
IO-Link	- the standard for intelligently connecting sensors and actuators from the field level to the MES level

Introduction

Industrial communication with Totally Integrated Automation

With Totally Integrated Automation, Siemens is the only manufacturer to offer an integrated range of products and systems for automation in all sectors – from incoming goods and the production process to outgoing goods, from the field level through the production control level to connection with the corporate management level.

The advantages of Totally Integrated Automation already pay off as regards design and engineering, but also assembly and commissioning and operation and maintenance.

Automation solutions can be implemented at little cost. New scope for development allows a quicker and more flexible response to new market requirements. Systems can be easily expanded or converted without having to interrupt ongoing operations.

Due to the increased use of Industrial Ethernet in automation, two topics within Totally Integrated Automation are becoming more and more important – PROFINET and SCALANCE.

PROFINET ...
for increasing the productivity of your plant

You need a seamless information flow for your strategic decisions within your company – from the first manufacturing step through operation up to the corporate management level. In order to achieve this, you rely on efficiency and transparency already during engineering.

PROFINET, the open and innovative Industrial Ethernet standard fulfills all the demands of industrial automation and ensures integrated, company-wide communication.

PROFINET also supports the direct connection of distributed field devices to Industrial Ethernet and the implementation of isochronous motion control applications. PROFINET also allows distributed automation with the support of component technology, as well as vertical integration and the implementation of safety-oriented applications. PROFINET also supports controller-controller communication.

Securely and flexibly networked across all levels with SCALANCE network components

SCALANCE X Industrial Ethernet Switches, SCALANCE S Industrial Security Modules and Industrial Wireless LAN (IWLAN) access points, client modules and SCALANCE M mobile radio routers that ideally meet the demands of industrial applications are available for networking the stations on the PROFINET/Industrial Ethernet.

The use of wireless communication to automation devices and industrial terminal devices helps to achieve greater flexibility. As a result you can simplify maintenance work and reduce service costs and downtimes. With Safety, even fail-safe communication is possible via a wireless network. This increases a company's competitiveness considerably.

Challenging applications with real-time requirements can be implemented in the radio field.
The use of wireless features for moving machines saves cable and servicing costs, driverless transport systems can receive data via the wireless system without requiring cables and remain flexible in the choice of route.

An overall solution comprises:

- Bus system with
  - Passive network components, e.g. cables
  - Active network components, e.g. switches

- Interfaces for connecting automation devices to the bus systems
  - Integrated interfaces
  - Own communications processors

- Gateways, e.g. IE/PB Link PN IO

- Software for configuring the networks

- Tools for maintenance and diagnostics

Industrial Ethernet Switch SCALANCE XR552-12M

SIMATIC NET offers all the components necessary for an integrated overall solution and supports the following communication systems:

Industrial Ethernet (IEEE 802.3) –
the international standard for area networking is the number one network in the LAN environment. Industrial Ethernet enables powerful communication networks to be constructed over wide areas.

PROFINET (IEC 61158/61784) –
the international standard uses Industrial Ethernet and allows real-time communication all the way to the field level, but also integrates the enterprise level. With the full utilization of existing IT standards, PROFINET allows isochronous motion control applications, efficient cross-manufacturer engineering and high availability of machines and systems on the Industrial Ethernet. PROFINET supports distributed automation (and controller-controller communication) and it allows fail-safe applications.

PROFIBUS (IEC 61158/61784) –
the international standard for the field level is the global market leader among fieldbus systems. It is the only fieldbus to allow communication both in manufacturing applications and in process-oriented applications.

AS-Interface (EN 50295/IEC 62026) –
the international standard which, as an alternative to the cable harness, links especially cost-effective sensors and actuators by means of a two-wire line.

IO-Link –
the standard for intelligently connecting sensors and actuators from the field level to the MES level.

Routers are implemented via controllers or links.
Configuration and diagnostics can be performed from any point in the plant.

KNX/EIB (EN 50090, ANSI EIA 776) –
the basis for building automation is the global standard.

PROFINET/Industrial Ethernet

Industrial Ethernet

Industrial Ethernet provides the industrial area with a powerful network that complies with the IEEE 802.3 (Ethernet) and 802.11 a/b/g/h/n (wireless LAN) standards.

The diverse options of Ethernet and the Internet that are already available today in the office sector can also be used in factory and process automation by means of Industrial Ethernet.
Ethernet technology, which has been used successfully for decades, allows users to precisely match network performance to requirements. The user can choose the data throughput rate to suit particular needs, as integrated compatibility makes it possible to introduce this technology in stages.

Ethernet is the world's current Number 1 in the network environment and offers significant benefits:

- Fast commissioning thanks to the simplest connection method

- High availability since existing networks can be extended without any adverse effects

- Virtually unlimited communication capabilities, since scalable performance using switching technology and high data rates are available

- Networking of the most varied application areas such as the office and production areas

- Company-wide communication thanks to the Internet connection option, with security components providing for data integrity

- Investment protection through continuous compatible further development

- Precise time-based assignment of events in the overall plant by means of plant-wide clock control.

SIMATIC NET, the industrial communication system from Siemens, relies on this proven technology. Siemens has already supplied several million connections worldwide in tough industrial environments subject to electromagnetic interference.

SIMATIC NET provides important supplements to Ethernet technology for industrial environments:

- Network components of the SCALANCE product families for the use of wired and wireless communication in harsh industrial environments

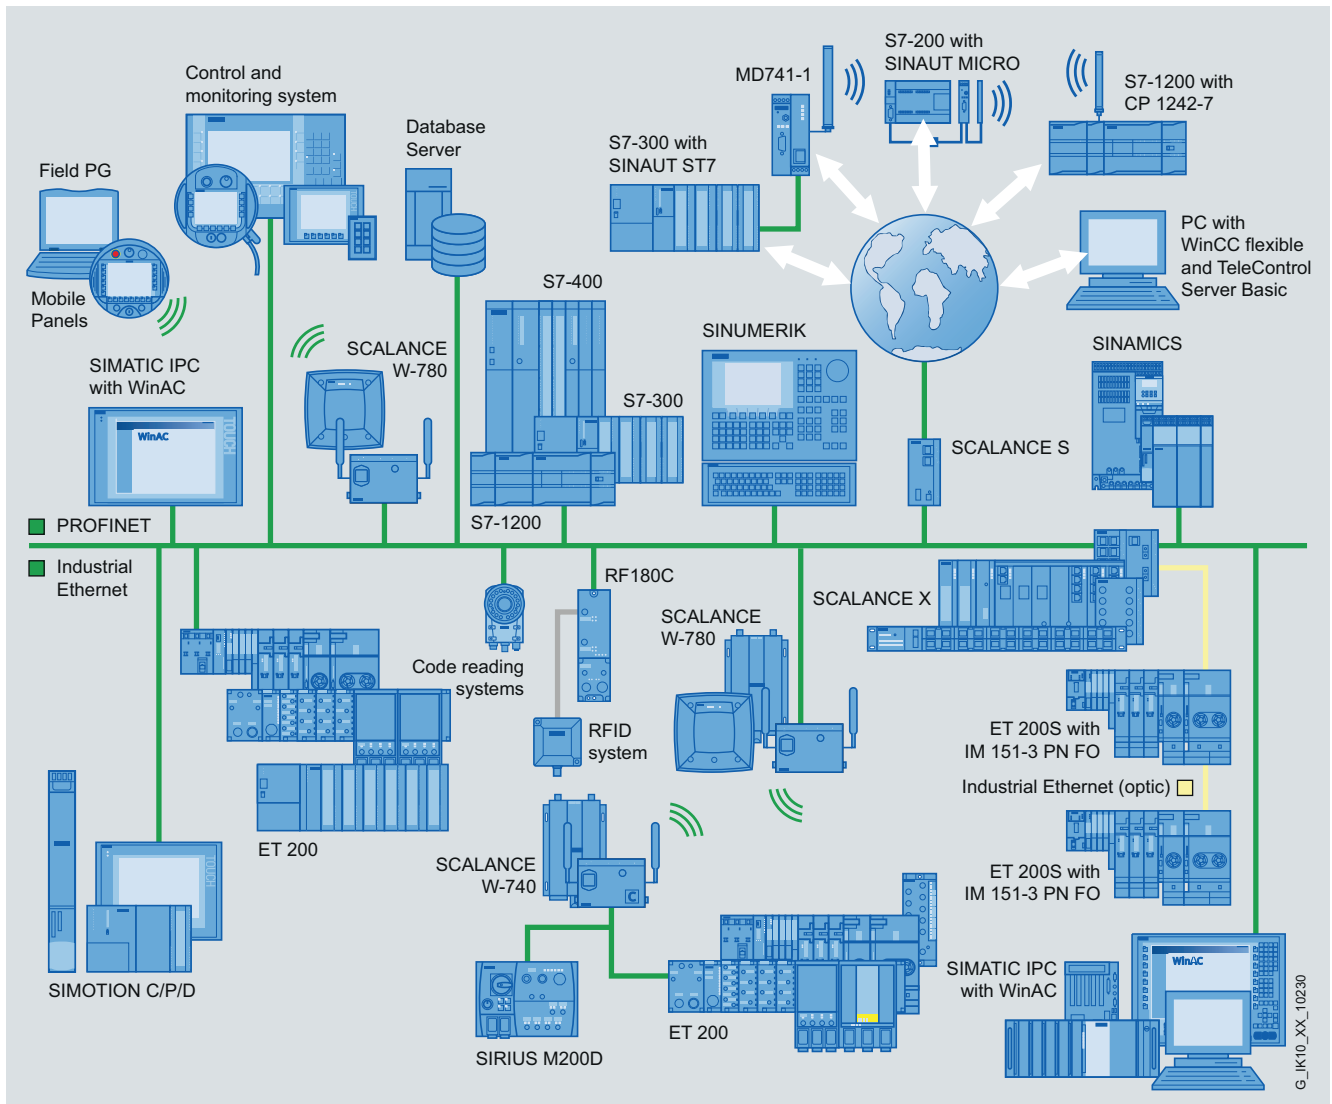
- Fast on-site assembly using the FastConnect cabling system

- Failsafe networks through high-speed redundancy and redundant power supply

- Continuous monitoring of network components through an effective signaling concept, and network monitoring software

The following communication functions/services are offered by Industrial Ethernet:

PG/OP communication

Comprises integrated communication functions which allow data communication via SIMATIC, SIMOTION and SINUMERIK automation systems with every HMI device and SIMATIC PG (STEP 7). PG/OP communication is supported by PROFINET/Industrial Ethernet and PROFIBUS.


S7 communication

S7 communication is the integrated communication function (system function block) for S7-400 or loadable function blocks for S7-300, which have been optimized within SIMOTION, SINUMERIK and SIMATIC S7/WinAC. It also enables PCs/IPCs and workstations to be connected. The maximum volume of user data per task is 64 KB.
S7 communication offers simple, powerful communication services and provides a network-independent software interface.

Open communication

The open communication (SEND/RECEIVE) allows the SIMATIC S7 controllers to communicate with other SIMATIC S7 and SIMATIC S5 controllers, PCs/IPCs and third-party systems.
In addition, for the simple connection of HMI stations, FETCH and WRITE are offered.

Complete overview of Industrial Ethernet

The socket interface for Industrial Ethernet
allows data communication with computers via TCP/IP. On this interface which is widespread in the PC and UNIX world, users can freely program the data exchange. The SEND/RECEIVE blocks (S/R) are used as access to TCP/IP in SIMATIC S7.

OPC (Openness, Productivity & Collaboration)
is a standardized, open and cross-vendor software interface. It permits interfacing of OPC-capable Windows applications to S7-communication, open communication (SEND/RECEIVE) and PROFINET.

IT communication

Information technology (IT) with e-mail, File Transfer (FTP), and web technology
integrates SIMATIC, SIMOTION and SINUMERIK into IT via Industrial Ethernet. In the office environment, e-mail, FTP, and web browsers have prevailed as widespread means of communication.

PROFINET communication

This communication is compliant with the IEC 61158/61784 standard. PROFINET, the international standard, uses Industrial Ethernet and enables real-time communication right down to the field level.

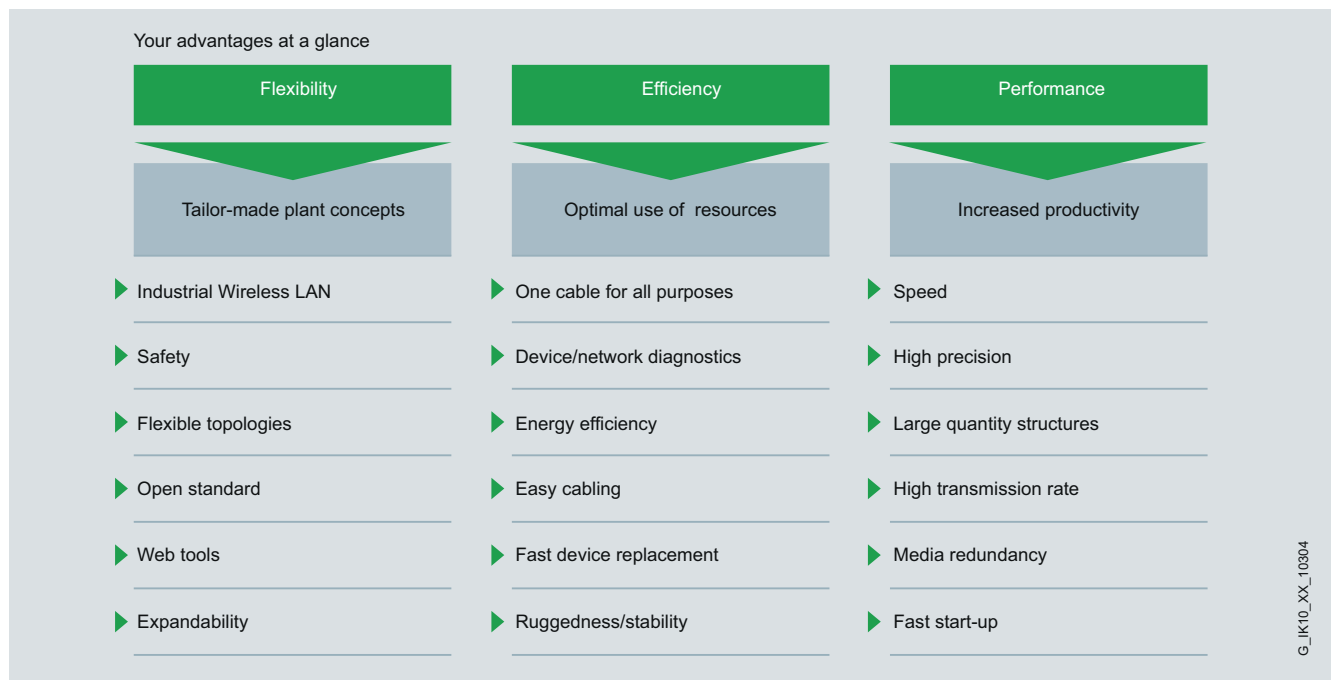
PROFINET/Industrial Ethernet

PROFINET – the Ethernet standard for automation

PROFINET is the leading Industrial Ethernet standard with more than 3 million nodes worldwide.

PROFINET increases the companies' success by accelerating processes, boosting productivity, and increasing plant availability.

With PROFINET, Siemens applies the Ethernet standard to automation. PROFINET enables high-speed and secure data exchange at all levels, thus making it possible to implement innovative machine and plant concepts. Thanks to its flexibility and openness, PROFINET offers users maximum freedom when engineering and structuring their plant architectures.

PROFINET's efficiency means optimal use of available user resources and a significant increase in plant availability. Innovative Siemens products and the performance of PROFINET provide a sustained boost to company productivity.


PROFINET innovations

PROFINET has been expanded with several innovative features. These simplify the system configuration, in safety-critical applications for example, and support a leaner and more flexible topology in many different scenarios.

The **I-Device (intelligent IO Device)** function enables simple and fast controller-controller communication through direct access to the IO address image with PROFINET IO protocol. Local controllers such as the ET 200S CPU can be integrated into modular machines more easily, for example.

The **Shared Device** function allows two controllers to access the same PROFINET IO Device, such as a distributed ET 200 or a drive in a safety application. Because fewer devices need to be installed in the field, the engineering, cabling, energy and installation costs are reduced.

Plant availability can be increased using a ring topology and the **Media Redundancy Protocol (MRP)**. This runs directly via the integrated RJ45 ports on PROFINET devices and can be combined in any way with the relevant Industrial Ethernet switches (e.g. SCALANCE X-200).

Advantages at a glance

Your advantages at a glance

Flexibility	Efficiency	Performance
Tailor-made plant concepts	Optimal use of resources	Increased productivity
Industrial Wireless LAN	One cable for all purposes	Speed
Safety	Device/network diagnostics	High precision
Flexible topologies	Energy efficiency	Large quantity structures
Open standard	Easy cabling	High transmission rate
Web tools	Fast device replacement	Media redundancy
Expandability	Ruggedness/stability	Fast start-up

G_IK10_XX_10304

More flexibility with PROFINET

Industrial Wireless LAN (IWLAN)

IWLAN reduces maintenance costs, increases reliability, and convinces with high communication performance. Only PROFINET allows the use of IWLAN with safety.

Safety

Safety-related communication via PROFIsafe reliably protects personnel, the environment, and plants.

Flexible topologies

PROFINET also enables the use of star, tree and ring topologies in addition to the linear topology.

Open standard

Thanks to its openness, PROFINET creates the basis for a uniform machine/plant automation network to which programmable controllers as well as standard Ethernet devices can be connected.

Web tools

PROFINET is 100 percent Ethernet and supports TCP/IP. Among other things, this enables the use of Web technologies, such as access to the integrated Web server of the field devices.

Expandability

With PROFINET, network infrastructures can be expanded as desired, even during operation.

More efficiency with PROFINET

One cable for all purposes

PROFINET offers a host of functions on one cable: Machine data and standard IT data merge. This creates integration and saves costs by reducing the overhead for cabling and training overhead.

Device and network diagnostics

Extensive diagnostic data can be read out from the devices to locate faults quickly. HTML standard Web sites are used for servicing PROFINET devices – locally and remotely.

Increased energy efficiency

PROFIenergy switches off individual loads or entire production units during breaks – in a coordinated and centrally controlled way.

Easy cabling

Fault-free establishment of industrial networks in a short time and without specialist knowledge: PROFINET makes this possible with the FastConnect system.

Fast device replacement

When replacing a PROFINET device, the IO Controller detects the new device and automatically assigns its name.

High degree of ruggedness

The use of switches even in field devices prevents faults in one section of the network from influencing the entire plant network. PROFINET enables the use of fiber-optic cables especially for areas that are critically sensitive to EMI.

More performance with PROFINET

Speed

Fast motion control applications need high-speed data exchange. PROFINET's short cycle times increase the productivity of machines and plants.

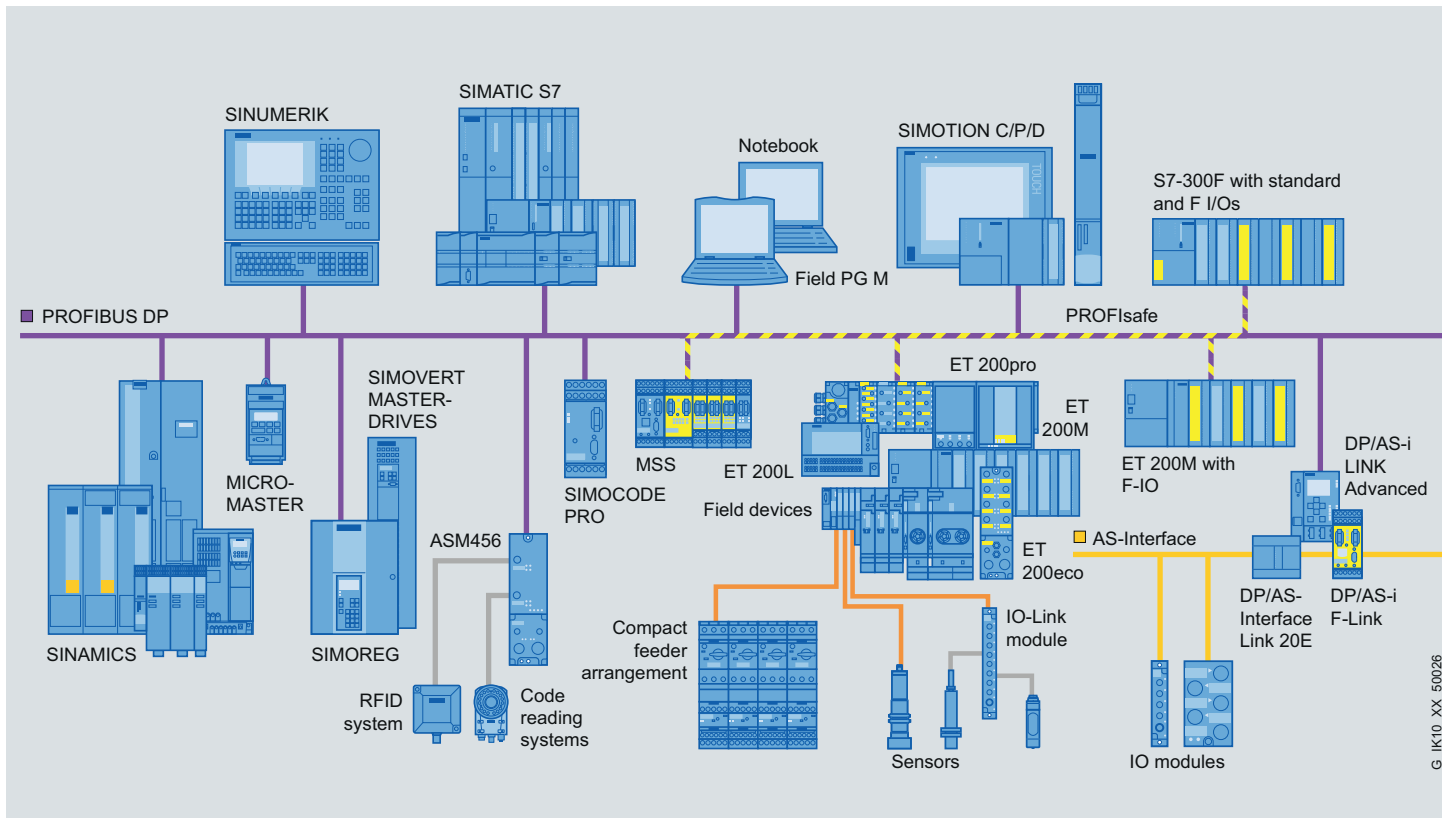
Precision

Communication via PROFINET is deterministic. A jitter of < 1 µs results in maximum precision cycles and thus guarantees high product quality.

Large quantity structures

With PROFINET, up to 256 devices can be managed by one SIMATIC controller. The number of nodes per network is more or less unlimited.

High transmission rate

By using Ethernet, PROFINET achieves a significantly higher transmission rate than previous fieldbuses. This enables problem-free transmission of even large volumes of data without affecting I/O data transfer.


Media redundancy

Higher plant availability can be achieved by means of a redundant installation. This can be implemented both with the help of external switches and direct via integral PROFINET interfaces.

Fast start-up

In modular plants, IO Controllers must detect new machines or plant sections quickly. With Fast Startup, PROFINET can detect devices in up to < 500 ms and connect them with the IO Controller.

PROFIBUS

Complete overview of PROFIBUS

PROFIBUS is used to connect field devices, e.g. distributed I/O devices or drives, to automation systems such as SIMATIC S7, SIMOTION, SINUMERIK or PCs. PROFIBUS is standardized in accordance with IEC 61158/61784 and is a powerful, open and rugged fieldbus system with short response times. PROFIBUS is available in different forms for various applications.

PROFIBUS DP
(distributed I/O)

is used for connecting distributed field devices, e.g. SIMATIC ET 200, or drives with extremely fast response times. PROFIBUS DP is used when sensors/actuators are distributed at the machine or in the plant (e.g. field level). The actuators and sensors are connected to the field devices.
The field devices are supplied with output data in accordance with the master/slave technique and transfer input data to the controller or PC.

Openness all along the line
Thanks to the openness of PROFIBUS DP, standard-compliant components from different manufacturers can also be connected. The IEC 61158/61784 standards provide future protection for your investment. A simple link to other bus systems, e.g. from the AS-Interface, is implemented by means of links and thus permits an integrated solution in the field of failsafety for the protection of both human and machine.

Siemens has a complete range of products of standard and fail-safe controllers, network components, communication software and field devices. And for field device manufacturers, Siemens offers everything to do with the PROFIBUS DP interface, such as ASICs, training, certification, and much more.

PROFIsafe
permits standard and safety-related communication on one and the same bus cable. It is an open solution for safety-related communication over standard buses and uses the PROFIBUS services.

Isochronous mode

The CPU, I/O and user program are synchronized with the
PROFIBUS cycle. The "Isochronous mode" function is sup-
ported by many CPUs of SIMATIC, SIMOTION, SINUMERIK and
servo drives. The drives are controlled using the PROFIdrive
profile.

PROFIBUS PA
(Process Automation)

expands PROFIBUS DP with intrinsically safe transmission of
data and power (e.g. transducers in the food processing in-
dustry) in accordance with the international standard IEC
61158-2 (same protocol, different physical properties).
PROFIBUS PA is used predominantly in the hazardous areas of
refineries (chemical, oil and gas).

AS-Interface

Example of a system configuration

Sensors, valves, actuators, drives – many different components operate on the field level. All of these actuators/sensors must be connected to an automation system. Distributed I/O devices are used for this; to a certain extent as intelligent outposts directly on-site.

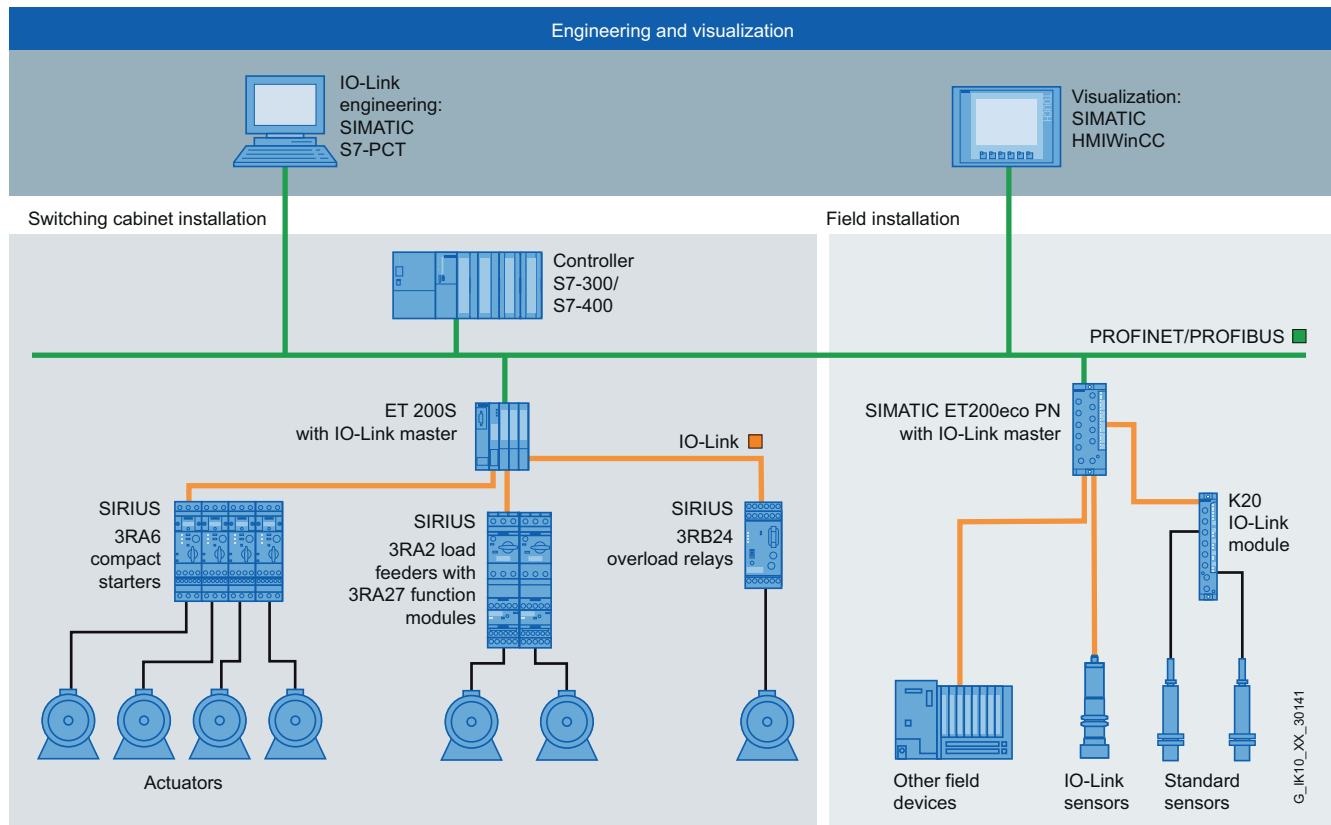
As a cost-effective alternative to the cable harness, AS-Interface links the components of the field level by means of a simple 2-wire cable for data and power. AS-Interface is standardized as an international industrial standard according to EN 50295 and IEC 62026-2 and is supported worldwide by a number of member companies of the AS-International Association, including the leading manufacturers of actuators and sensors. AS-Interface is used where individual actuators/sensors are spatially distributed throughout the machine (e.g. in a bottle filling plant).

AS-Interface is a single master system. There are communications processors (CPs) for SIMATIC and for SIMOTION and links that control field communication as masters. With the AS-Interface specification V2.1 or V3.0, up to 62 slaves can be connected. The AS-Interface specification V3.0 allows a maximum of 1000 digital inputs/outputs to be connected (profile S-7.A.A: 8DI/8DO as A/B slave). New profiles allow extended addressing (A/B) to be used for analog slaves, too. The analog value transmission is accelerated via "fast analog profiles". Thanks to the integrated analog value processing in the masters, the access to analog values is just as easy as the access to digital values.

For connecting the AS-Interface to PROFIBUS DP, the DP/AS-i LINK Advanced, DP/AS-i F-Link or DP/AS-Interface LINK 20E are available with degree of protection IP20. This enables the use of AS-Interface as a subordinate network for PROFIBUS DP. The IE/AS-i LINK PN IO allows AS-Interface to be connected to Industrial Ethernet and thereby a direct embedding in the PROFINET environment.

Cost savings

AS-Interface replaces costly cable harnesses and connects binary actuators and sensors such as proximity switches, valves or indicator lights, as well as analog signals with a controller such as SIMATIC.

In practice this means: Installation runs smoothly because data and power are transported together over **one** single line. Thanks to the specially developed ribbon cable (yellow in color) and insulation displacement technology, the AS-Interface slaves can be connected anywhere.


This concept is extremely flexible and has a great effect on savings. No expert knowledge is required for installation and commissioning. Furthermore, through simple cable laying and the clear cable structure as well as the special design of the cable, you not only significantly reduce the risk of errors, but also service and maintenance costs.

Automation in the beverage industry.

IO-Link

Uninterrupted communication down to the last meter

Networking with IO-Link

IO-Link – more than just another interface

IO-Link is the smart concept for the standardized linking of switching devices and sensors to the control level by means of an economical point-to-point connection.

The new communications standard IO-Link below the fieldbus level allows central fault diagnosis and location as far as the actuator/sensor level and simplifies both commissioning and maintenance by allowing the parameter data to be modified dynamically, direct from the application.

Improvements in the intelligence of field devices and their integration in the overall automation support data access down to the lowest field level. The result: greater plant availability and reduced engineering overhead.

As an open interface, the IO-Link can be integrated into all common fieldbus and automation systems. Consistent interoperability ensures maximum protection of investment. This also applies in the context of existing machine concepts for continued use of sensors without an IO-Link interface.

Together for integrated quality

The requirements for integrated communication are increasing. At the same time, the variety of field devices, actuators, and sensors is increasing immensely – with ever greater intelligence.
IO-Link offers the solution for these requirements and is seen by manufacturers as a valuable addition to the communications landscape (including AS-Interface).

As a committed driver of this issue, Siemens is further developing not only its product and system range accordingly, but by integrating IO-Link in Totally Integrated Automation, it is also providing a unique integrated communication solution.

Engineering

Reduced engineering times

- Standardized, open system for more flexibility (third-party IO-Link devices can be integrated in the engineering)
- Uniform and transparent configuration and programming through integrated engineering (SIMATIC STEP 7)
- Freely available function blocks for SIMATIC for user-friendly parameterization and diagnostics, and read-out of measured values
- Efficient engineering thanks to use of off-the-shelf faceplates in SIMATIC HMI
- Low error rate in CAD circuit design thanks to reduction in control circuit wiring

Commissioning

Reduced commissioning times

- Faster installation and minimized error rate thanks to reduction in control circuit wiring
- Space savings in the control cabinet
- Low-cost wiring technology with several branches thanks to unrestricted use of existing Siemens components

Operation and maintenance

Increased plant availability

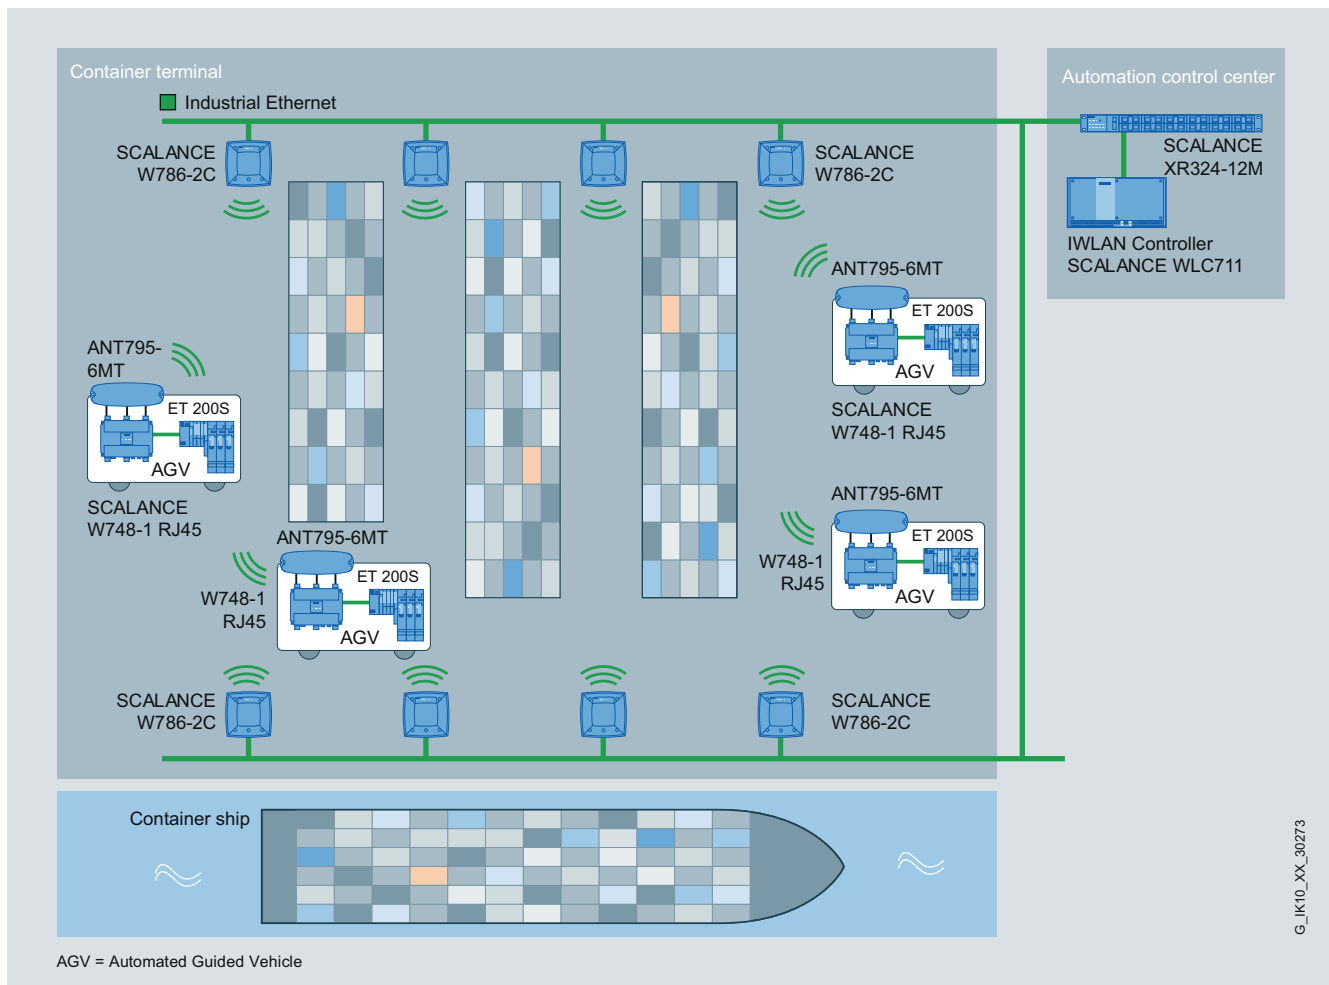
- High level of transparency in the plant down to the field level
- Reduction of downtime and maintenance times through plant-wide diagnostics and faster error correction
- Support for preventive maintenance
- High transparency through incorporation of energy management systems, readout of current values, and diagnostic messages
- Shorter conversion times thanks to central parameter and recipe management for field devices as well
Industrial Wireless Communication

Within the scope of industrial communication, wireless communications opens up new perspectives – from partial modernization of a plant, right up to optimizing complex logistics or production processes.
On the basis of Industrial Wireless Telecontrol, Industrial Wireless LAN and WirelessHART, Siemens offers solutions for reliable automation with Industrial Wireless Communication.

Reliable, wireless communication with IWLAN

Reliable wireless communication with IWLAN

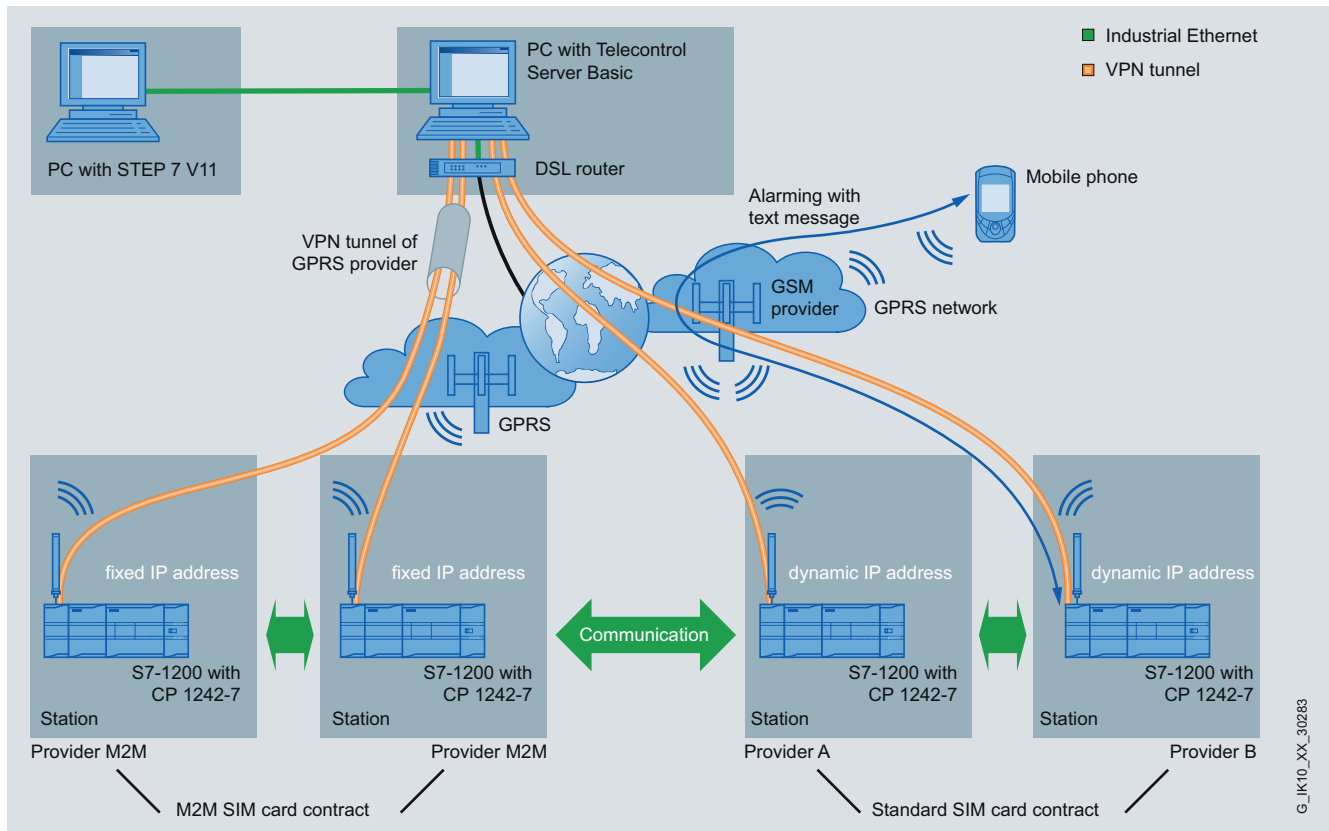
Industrial Wireless Telecontrol – low-cost and versatile wireless technology for longer distances

Continuous communication between widely separated plant sections in the area of water/wastewater, or high-speed remote maintenance access to machines and plants on the other side of the world - these are just two of countless ways of reaping the benefits of Industrial Wireless Telecontrol (IWT). Thanks to integration in a telecontrol system or an HMI/SCADA system, transferred process data is available at any time via mobile radio.


Industrial Wireless LAN – flexible, plant-wide wireless infrastructure

Wireless solutions are increasingly becoming a matter of course in machines and plants. In the case of high data communication requirements, Industrial Wireless LAN (IWLAN) backs innovations like deterministic radio and the Industrial Ethernet standard PROFINET. Thanks to the use of PROFIsafe via IWLAN, PROFINET opens up completely new perspectives – from efficient engineering, through real-time solutions, all the way to safety-related tasks.
Furthermore, an IWLAN infrastructure can also be used for additional applications such as video monitoring.

WirelessHART – wireless connection of the process instrumentation

WirelessHART is an open industry standard, developed for the particular requirements of wireless communication for field devices in the process industry. It meets all specific requirements for reliability, security, economy and user-friendly operation system-wide. With more than 30 million installed devices worldwide, HART technology is the most frequently used communication protocol for intelligent process instrumentation at the field level. WirelessHART is backwards-compatible with the wired HART technology and thus offers maximum investment security for hardware, software and expertise.


Application example for controller-based IWLAN applications with a large number of access points, e.g. in a container terminal

Advantages of a wireless communication network

- Increased competitiveness, since greater flexibility is achieved through mobility

- Maintenance work is simplified, service costs and down-times are reduced, and personnel are used optimally

- No wear and tear of rotating and moving equipment or system components

- Integrated wireless network for voice and data across the divisions of the company

- Remote diagnostics for different production machines from a central service location reduces service costs

- Awkwardly located installations can be accessed easily; there is no need for complex wiring

Industrial Remote Communication

Efficient remote access to plants and machines with SIMATIC via industrial remote access

Efficient industrial remote access

Global remote access to far-flung plants, remote machines and mobile applications is gaining in significance – both in industry and in industry-related areas. With a comprehensive range of solutions for industrial remote access, Siemens offers the ideal basis for efficient and reliable monitoring and control of widely distributed plants of any size.

Secure and flexible access worldwide

Industrial plants are often distributed over large areas – sometimes even across national borders. Siemens offers proven solutions for industrial remote access, such as flexible telecontrol systems and efficient remote maintenance. Whether in public infrastructure, the manufacturing or process industry: With comprehensive solutions for teleservice and telecontrol, Siemens is the right partner every time.

Telecontrol

Telecontrol involves the connection of distant process stations to one or more central control systems. Various different public or private networks can be used for communication for the purposes of monitoring and control. Event-driven or cyclic exchange of process data is performed with special telecontrol protocols and enables the operating personnel to manage the overall process effectively.

The telecontrol systems are based on SIMATIC. They supplement the SIMATIC system with corresponding hardware and software, and thus permit individual process stations to be networked over a WAN (wide area network). The data for this is transmitted via classical WAN, e.g. copper dedicated cable, dial-up networks, wireless, but also via IP-based networks such as mobile wireless networks or the Internet.

Teleservice (remote maintenance/diagnostics)

Teleservice is data exchange with physically remote technical plants (machines, plants, computers, etc.) for the purpose of error detection, diagnostics, maintenance, repair, or optimization.

TeleControl Basic

Telecontrol Basic connects the control center via the Telecontrol Server Basic control center software with the substations, consisting of SIMATIC S7-1200 controllers with CP 1242-7 GPRS module. The server also supports the connection of S7-200 stations with MD720-3 modems. Wireless GPRS technology is available as the transmission medium. An S7-1200 substation permit remote communication with a control center (service center) as well as direct slave-slave communication with other S7-1200 substations. Small-scale applications with few outstations can be implemented, as well as large-scale plants comprising up to 5000 outstations. International approvals permit worldwide use.

Extended Telecontrol Server Basic functionalities allow the use of telecontrol server services. The overall solution also includes the teleservice function and thus provides, for example, worldwide access to the S7-1200 stations for international plant and machine manufacturers.

TeleControl Professional

TeleControl Professional comprises the Siemens telecontrol systems for extensive, expanded applications in the process industry. Control systems such as PCS 7, WinCC and third-party control systems with OPC allow reliable control and monitoring of outstations based on the SIMATIC S7-300 and S7-400 controls.

The outstations and substations can communicate with each other as well as with one or more control centers.

Industrial Remote Communication

Transmission networks

Telecontrol supports a wide variety of communication networks. In the classical WAN sector, these are:

- Dedicated lines (private or leased)
- Private radio networks
  (optionally with time slot procedure)
- Dial-up networks (analog, ISDN, GSM)

SINAUT also offers appropriate modems for conventional WANs. Communication, however, is also possible via Ethernet-based WAN, namely:

- Via Ethernet-based wireless systems, e.g. Industrial Wireless LAN with SCALANCE W
- Via fiber-optic conductors, e.g. through use of SCALANCE X switches with optical ports; distances of up to 120 km can then be covered
- Via public networks and Internet using DSL and/or GPRS and UMTS

All networks can be mixed in any manner in a SINAUT project. Star, line and node topologies can be designed, and also mixed configurations of these. A station can be linked using two transmission paths to permit redundant data transmission. The two paths can be of the same type or also different, e.g. dedicated line combined with telephone network or ISDN with DSL.

Control center systems

A number of different versions can be selected for setting up the control center depending on the process requirements and extent of the information:

- SINAUT ST7cc
  This WinCC-based PC control center is the ideal control center system for both SINAUT ST7 and SINAUT ST1. It has been developed specifically for event-driven and time-stamped data transmission on the SINAUT system and can have a single or redundant design.
- PCS 7 with PCS 7 TeleControl
  This is the ideal control center system for plants in which larger local automation tasks have to be combined with telecontrol connections. In addition to SINAUT ST7, remote stations with other communication protocols can be connected, e.g. over DNP3 or IEC 870-5-101/-104.
- WinCC TeleControl
  This WinCC-based control center system offers the connection of SIMATIC substations to other telecontrol protocols such as DNP3 or IEC 870-5-101/-104.
- SINAUT ST7sc
  This OPC server software is ideal for connecting the SINAUT telecontrol system to control centers from other vendors via OPC client function. ST7sc features extensive buffer mechanisms which prevent data from being lost even if the OPC client fails, and it can have a single or redundant design.
- SIMATIC S7 controller as control center
  Like the substations, this control center comprises a SIMATIC S7-300 or S7-400 controller and is suitable for simpler applications requiring only one current process image of the telecontrol stations. The station process control can be influenced by entering commands, setpoints or parameters. The control center can also be used to extend a PC control center (SINAUT ST7cc or ST7sc), e.g. for data output on a panel, as an emergency operating system, or for implementing cross-station control tasks.

Teleservice (remote diagnostics and remote maintenance)

Remote diagnostics and remote maintenance of production plants are indispensable in modern automation technology. They are more efficient and more cost-effective than an on-site service employee on site. This allows faults to be detected and cleared much faster, downtimes of machines are reduced and their availability is increased.

Machines and plants are increasingly operated in places which are far away from the production site. Plant constructors must nevertheless be able to provide support in the event of a fault. Especially during the warranty period this can result in high costs. TeleService helps to reduce this risk.

The possible applications for TeleService are manifold. Plants can be diagnosed, values set and data transmitted from any place on earth via a telephone cable. TeleService also enables the SIMATIC controllers to send text messages per SMS or e-mail, making a significant contribution to saving travel and personnel costs in service work.

Teleservice via IP-based networks

Optimum remote maintenance is based on reliable, permanently available, secured and economical data connections.

Depending on the application, SIMATIC NET provides the appropriate solution:

- For continuous connections or simultaneous access to several plants, a solution via the Internet using SCALANCE S modules is recommended, both on the service and the plant side.

- For flexible remote maintenance access from any Internet connection – whether in the office, home office or hotel room – SOFTNET Security Client is the right software solution for connecting to the SCALANCE S Security Module installed in the plant.

- For plants without wired network connection, the MD741-1 GPRS router establishes remote maintenance access to the SCALANCE S in the service center.

- The SCALANCE M873 and M875 UMTS routers are available for plants requiring remote maintenance access at an especially high bandwidth.

In all cases, the communication is reliably protected by authentication and encryption via a virtual private network (VPN) tunnel, in order to rule out the possibility of industrial espionage or manipulation.

Siemens Remote Services

The service concept of "Siemens Remote Services" provides a powerful, secure platform for remote access to machines and plants. The inclusion of "Shared Experts" ensures effective support, not only from Siemens but also from the internal company specialists.

Configuration example for teleservice via UMTS mobile telephone network

Industrial communication
Data for practical applications

| Communication Systems Compared in Practice				
	Industrial Ethernet PROFINET	**PROFIBUS DP**	**AS-Interface**	**IO-Link**
Criteria				
Data rate	10/100 Mbit/s 1/10 Gbit/s (only 100 Mbit/s for PROFINET)	9.6 Kbit/s – 12 Mbit/s adjustable 31.25 Kbit/s [1]	Send cycles 5 ms	4.8/38.4 Kbit/s or SIO (switching operation)

PROFINET/
Industrial Ethernet

2

2

PROFINET/Industrial Ethernet
Industrial Ethernet

Introduction

2

Overview

- Area and cell network according to the international standards IEEE 802.3 (Ethernet) and IEEE 802.11 a/b/g/h/n (wireless LAN) designed for the industrial environment right down to the field level
- Connection of automation components (controllers and field devices) to each other and to PCs and workstations as well as components for wireless communication
- PROFINET, the Industrial Ethernet standard for automation, is based on Standard Ethernet (IEEE 802.3) and supports the connection of devices from field level up to management level

- Comprehensive open network solutions can be implemented
- High transmission performance at up to 10 Gigabit/s
- Integration of conventional IT functionalities such as Web server and e-mail in the automation sector
- A security solution especially for industrial automation thanks to the industrial security concept with the security products of SIMATIC NET (SIMATIC NET CPs with Security Integrated, SCALANCE S and SCALANCE M)

Industrial Ethernet in the communications landscape

■ **Overview** (continued)

Ethernet

The LAN standard from the office sector.

Ethernet currently has a market share of over 90% with a rising trend, thus placing it in the pole position in the LAN landscape worldwide. The specification of this baseband LAN was developed in the 1970s and standardized in the international IEEE 802.3 standard. Ethernet has continued to experience rapid development and established itself in all speed ranges and application areas.

Milestones include:

- Virtually unlimited communication capabilities with scalable performance due to
  - switching technology, full duplex, redundancy
  - continuously rising data rates (10/100 Mbit/s, 1/10 Gbit/s)
- High availability of the network, because:
  - existing networks can be expanded without any adverse effects
  - network structures with any form of meshing compensate for the failure of individual network components (e.g. by means of the Rapid Spanning Tree Protocol)
- Compatible protocol expansions, e.g. support of virtual subnetworks and prioritized data traffic through the use of VLANs
- Structured cabling concept
  - Standardized connection technology
  - Simplest connection technology due to use of preassembled twisted pair cables
  - Glass fiber-optic cables for long distances, areas subject to RFI and inter-building cabling

Ethernet forms the basis for overlaid network protocols such as TCP/IP. TCP/IP is responsible for the transport of data between LANs and represents the basis for IT services (e.g. Internet). In addition, this enables different LAN technologies to be easily integrated, e.g. Ethernet with Wireless LAN.

Ethernet components for the office sector are offered by a large number of vendors, but do not always meets the specific requirements of the industrial sector.

For planning, operation and maintenance of Ethernet networks, sufficiently qualified personnel are available worldwide.

Industrial Ethernet

The industry-standard version of Ethernet.

It was not only its performance when exchanging large volumes of data that made Ethernet ideal for use in the industrial environment – high availability, reliability, real-time capability, robust connection technology and ease of operation without special IT knowledge have also made this standard suitable for industrial use.

By means of corresponding additions for tough Industrial use, Siemens has shown that Ethernet can also be used successfully in these applications. This approach has been consistently and successfully applied not only for Industrial Ethernet and PROFINET, but also for Industrial WLAN.

PROFINET/Industrial Ethernet/Ethernet conforming to IEEE 802.3

Industrial Ethernet offers a powerful area and cell network according to IEEE 802.3 (Ethernet) for industrial applications. This ensures that the widest range of application areas, such as office and production, can be networked with one another. The numerous possibilities of the IT standards, familiar from the office world, can thus also be utilized in production and process automation.

Wherever practical, Industrial Ethernet utilizes innovative Ethernet technology and strengthens it for use in the industrial sector.

- Network components for use in tough industrial environments (dust, moisture, extreme temperatures, impact loads, vibrations)
- Rugged and simple connection method on site
  - FastConnect cabling system with RJ45 technology
  - Assembly of POF and PCF fiber-optic cables
- Failsafe networks through high-speed redundancy and redundant power supply
- Connection of automation components (controllers and field devices) to each other and to PCs and workstations
- Optimized communication between automation components and simultaneous, open communication according to TCP/IP standard
- Simple connection to the Wireless LAN and Industrial Wireless LAN (IWLAN) networks in accordance with IEEE 802.11
- A safety solution specially designed for industrial automation with the industrial security concept

Among the Siemens Ethernet components for industrial use, the focus is on compatible successor products and spare parts availability of up to 10 years.

PROFINET/Industrial Ethernet
Industrial Ethernet

Introduction

■ **Overview** (continued)

PROFINET

The open Industrial Ethernet standard for automation

With more than three million nodes worldwide, PROFINET is the leading cross-vendor Industrial Ethernet standard (IEC 61158/61784) for automation.

PROFINET increases the companies' success by accelerating processes, boosting productivity, and increasing plant availability.

Advantages at a glance

Your advantages at a glance

Flexibility	Efficiency	Performance
Tailor-made plant concepts	Optimal use of resources	Increased productivity
▶ Industrial Wireless LAN	▶ One cable for all purposes	▶ Speed
▶ Safety	▶ Device/network diagnostics	▶ High precision
▶ Flexible topologies	▶ Energy efficiency	▶ Large quantity structures
▶ Open standard	▶ Easy cabling	▶ High transmission rate
▶ Web tools	▶ Fast device replacement	▶ Media redundancy
▶ Expandability	▶ Ruggedness/stability	▶ Fast start-up

G_IK10_XX_10304

■ **More information**

Note:

In many SIMATIC NET components with management function, extensive parameterization and diagnostics functions are provided over open protocols and interfaces (e.g. Web server, network management).

These open interfaces provide access to those components, which can also be used for illicit activities.

When the above-mentioned functions and the open interfaces and protocols are used (e.g. SNMP, HTTP and Telnet), appropriate security precautions must be implemented to suppress unauthorized access to the components or network, especially from the WAN/Internet.

For this reason, automation networks can be isolated from the remaining corporate network using security applications (e.g. SCALANCE S).

For further information, see the section "Industrial Security".

It is important to note the boundary conditions for use of the specified SIMATIC Net products (order numbers 6GK..., 6XV1) which you can view on the Internet.

You will find more information on the Internet at:

www.siemens.com/simatic-net/ik-info

2

■ Overview

Standard communication

This comprises standardized protocols for data communication.

ISO, TCP/IP, UDP transport protocols

ISO, TCP/IP and UDP are available as transport protocols.

PROFINET

Based on Industrial Ethernet, PROFINET enables direct communication of field devices (IO Devices) with controllers (IO Controllers) as well the solution of isochronous drive controls for motion control applications.

Media Redundancy Protocol (MRP)

Procedure specified in the IEC 61158 Type 10 standard for increasing the network availability in a ring topology.

Information technology (IT)

IT integrates SIMATIC into the information technology via Industrial Ethernet. These means of communication and communication paths are also available to SIMATIC. Depending on the product and stage of expansion, communications processors support technologies from the IT environment such as:

- *E-mail;*
  Via the integral e-mail client, network components, communications processors and routers can send emails to provide information about plant states, e.g. plant standstill or imminent overload, or to automatically request a service call.

- *Freely definable HTML pages;*
  Communications processors can perform web diagnostics with the aid of static HTML pages and a user-specific display is supported with the aid of freely definable HTML pages.

- *FTP;*
  the File Transfer Protocol (FTP) permits simple, universal coupling, e.g. the PLC can be connected to different computers or embedded systems

IP routing (IP-R)

The system connections for the SIMATIC S7 to Industrial Ethernet, CP 343-1 Advanced, and CP 443-1 Advanced, with two separate interfaces (integrated network separation) and SCALANCE S and SCALANCE X414-3E, support the forwarding of IP messages between Gigabit and PROFINET interfaces. The SCALANCE M mobile wireless routers support routing between the mobile Internet and the connected LAN.

OPC (Openness, Productivity & Collaboration)

OPC is a standardized, open, and vendor-independent interface that is widely used in automation. It permits the connection of OPC-capable Windows applications using many different protocols such as S7-communication, PROFINET, and SNMP.

PG/OP communication

The SIMATIC automation systems can handle data communication with HMI devices (e.g. TP/OP) and programming devices (with STEP 7, STEP 5) via the integral communication functions. PG/OP communication is supported by MPI, PROFIBUS and Industrial Ethernet.

S7 communication

S7 communication is the integral communications function (SFB), which has been optimized within the SIMATIC S7. It enables PCs and workstations to be connected. The maximum volume of user data per task is 64 KB. S7 communication offers simple, powerful communication services and provides a network independent software interface for all networks.

Open communication

The open communication (SEND/RECEIVE) allows the SIMATIC S7 controller to communicate with other SIMATIC S7 and SIMATIC S5 controllers, PCs and third-party systems. In addition, for the simple connection of HMI stations, FETCH and WRITE are offered.

BACnet communication

BACnet (Building Automation and Control Networks) is an ASHRAE (American Society of Heating, Refrigeration and Air Conditioning Engineers Inc.) communication protocol for data networks used for building automation and control. It is equally suitable for the management and automation levels, and is approved as an ANSI, CEN and ISO standard.

MES/ERP communication (ERPConnect)

Communication with ERP or MES systems via database link, e.g. ORACLE, MySQL, MS-SQL, DB2 using a firmware expansion which must be ordered separately

System connections

For many data terminals, communications modules (CPs, CMs, TIMs) are available that already have the communications functions implemented as firmware and which therefore relieve the data terminal of communication tasks (e.g. flow control, blocking, etc.).

Time synchronization

By means of SIMATIC procedures or NTP (Network Time Protocol), plant-wide time synchronization is achieved.

Communications overview for PG/PC

Topologies

■ **Overview**

Network performance and network technologies for Industrial Ethernet

When combined, the current Industrial Ethernet technologies can significantly boost performance on the network in comparison with the original 10 Mbit/s technology. These technologies are:

- *Fast Ethernet* with 100 Mbit/s:
  Messages are transported much faster than Ethernet (10 Mbit/s) and therefore only occupy the bus for an extremely short time. For Fast Ethernet, a 4-wire FastConnect cabling system (Cat5e) is available with cable, plug and outlet.

- *Gigabit Ethernet* with 1 Gbit/s:
  Gigabit Ethernet is faster than Fast Ethernet by a factor of 10, the bus is occupied for only one tenth of the time. For Gigabit Ethernet, an 8-wire FastConnect cabling system (Cat6) is available with cable, plug and outlet.

- *Gigabit Ethernet* at 10 Gbit/s:
  Compared to Ethernet with 1 Gbit/s, Ethernet with 10 Gbit/s is faster again by a factor of 10.

- *Full Duplex* prevents collisions:
  The data throughput increases enormously because the usual message repetitions are avoided.
  Data can be sent and received simultaneously between two stations. The data throughput for a full duplex connection therefore rises to 200 Mbit/s with Fast Ethernet and to 2 Gbit/s with Gigabit Ethernet. With full duplex, a greater length of the network is possible. This means, for example, that when glass fiber-optic cables are used, distances of up to 120 km can be achieved.

- *Switching* supports parallel communication:
  When a network is subdivided into several segments using a switch, or individual stations are connected direct to a switch, this results in load separation. Data communication is possible in each individual segment independently of the other segments. In the overall network, several messages can therefore be en-route simultaneously. The increase in performance is therefore due to the sending of several messages simultaneously.

- *Autocrossover* automatically crosses the send and receive cables on Twisted Pair interfaces.

- *Autosensing* describes the characteristic of network nodes (data terminals and network components) that automatically detect the transmission rate of a signal (10 Mbit/s, 100 Mbit/s or 1 Gbit/s) and support autonegotiation.

- *Autonegotiation* is a configuration protocol on Fast Ethernet. Before initiating the actual data transmission, network devices automatically negotiate a transmission mode which is supported by any device (1000 Mbit/s,100 Mbit/s or 10 Mbit/s, full duplex or half duplex)

Ethernet Switching

The Industrial Ethernet switch has the following functionality:

- Depending on the number of available interfaces, switches are able to simultaneously interconnect several pairs of subnetworks or stations temporarily and dynamically, with each connection possessing the full data throughput.

- By filtering the data traffic on the basis of the Ethernet (MAC) address of the terminals, the data traffic remains local and only data intended for nodes of another subnetwork is forwarded by the switch.

- More data terminals can be connected than in a classic Ethernet network.

- Error propagation is limited to the subnetwork concerned.

The switching technology offers definite advantages:

- Subnetworks and network segments can be created.
- The data throughput is increased and with it the network performance as a result of structuring the data communication.
- Easy rules for network configuration.
- Network topologies with 50 switches and an overall extension of more than 150 km can be implemented without the need to take signal propagation times into account.
- Unlimited extension of the network by connecting individual collision domains/subnetworks.
- Easy, reaction-free extension of existing networks.

2

■ Overview (continued)

Full duplex

Full duplex (FDX) is an operating mode in the network that, in contrast to half duplex, allows stations to send and receive data simultaneously. When FDX is used, collision detection is automatically deactivated in the participating stations.

For FDX, transmission media with separate send and receive channels must be used, e.g. FOC and TP, and the participating components must be able to store data packages. With an FDX connection collisions do not occur, so components that support FDX can send and receive simultaneously at the nominal transmission rate. The data throughput therefore increases to twice the nominal transmission rate of the network, to 20 Mbit/s with the classic Ethernet and 200 Mbit/s with Fast Ethernet. With Gigabit Ethernet, up to 2000 Mbit/s are achieved.

A further advantage of FDX is the increase in the network extension.

By deactivating the collision principle, the distance between two components can be increased by the size of a collision domain or more. With full duplex, the maximum distance can extend as far as the performance limit of the send and receive components. This is especially the case in connection with fiber-optic cables. When glass fiber-optic cables are used, distances of up to 120 km can be achieved.

Autosensing/Autonegotiation

Autosensing describes the characteristic of network nodes (data terminals and network components) that automatically detect the transmission rate of a signal (10 Mbit/s, 100 Mbit/s or 1000 Mbit/s) and support autonegotiation.

Autonegotiation is the configuration protocol for Twisted Pair. It enables the participating nodes to negotiate and agree the transmission rate before the first data packages are transferred:

- 10 Mbit/s,100 Mbit/s, 1 Gbit/s or 10 Gbit/s
- Full duplex or half duplex

Autonegotiation can also be deactivated if a specific transmission rate has to be set.

The advantage with Autosensing lies in the problem-free interoperability of all Ethernet components.
Classical Ethernet components that do not support Autosensing work problem-free with Fast Ethernet and new Gigabit Ethernet components that do support Autosensing.

Autocrossover

The Autocrossover function automatically crosses the send and receive cables on Twisted Pair interfaces. This means that crossed connecting lines (e.g. TP XP Cords) are no longer required.

Increased performance through switching, full duplex

Topologies

Overview (continued)

Fast redundancy

Extremely fast reconfiguration of the network following an error is indispensable for industrial applications, because the connected data terminals will otherwise disconnect logical communication links. This would result in a process running out of control or emergency shutdown of the plant.

In order to achieve the very fast reaction times required, various standardized procedures are used. A network can then be reconfigured to form a functional network infrastructure in a fraction of a second.

In an optical ring comprising 50 switches, the network will be reconfigured after a fault (cable break or switch failure) in less than 0.2 seconds. The connected data terminals remain unaffected by the changes in the network and logical connections are not disconnected. Control over the process or application is assured at all times.

In addition to implementing high-speed media redundancy in the ring, Industrial Ethernet switches also offer the functions required for high-speed redundant coupling of rings or network segments. Network segments in any topology or rings can be coupled via two switches in each case.

Configuration with high-speed redundancy in the optical ring

■ **Overview** (continued)

Configuration with high-speed redundancy in the electrical ring

Media Redundancy Protocol (MRP)

Higher plant availability can be achieved by means of a redundant installation (ring topology). The media redundancy can be created on the one hand by means of switches, and on the other hand direct via the PROFINET interfaces on SIMATIC controllers and distributed inputs/outputs. Thanks to the MRP protocol (IEC 61158 Type 10), reconfiguration times of less than 200 ms can be achieved, depending on the number of stations.

If the ring is interrupted at one point, immediate reconfiguration takes place and all communication nodes continue to be accessible.

Overview (continued)

Redundancy with the Spanning Tree algorithm

The Spanning Tree algorithm is described in the IEEE 802.1d standard; it organizes any number of meshed Ethernet structures comprising bridges and switches.

To prevent data packages circulating in the network, in the case of closed meshes different connections are switched to standby so that an open tree structure results from the meshed structure.

The bridges/switches communicate for this purpose using the Spanning Tree protocol. This protocol is extremely complex because it has to handle any type of network structure.

The organization of network structures with the Spanning Tree protocol can take from 30 to 60 seconds. During this period, productive communication for reliable visualization or process control in the network is not possible.

In the time-optimized version "Rapid Reconfiguration Spanning Tree" according to IEEE 802.1, the time is shortened to between 1 and 3 seconds for up to 10 series-connected switches. For connecting to office networks, some SIMATIC NET switches support the Rapid Spanning Tree Protocol.

Switched network

Switched industrial networks can be configured electrically or optically with a linear, star or ring structure, or a combination.

They are constructed with SCALANCE X switches and with integral switches, e.g. in communications processors. Fiber-optic conductors or Twisted Pair cables are used as the transmission media between the switches.

Data terminals or network segments are connected over twisted-pair cables or polymer optical fiber (POF) . Switched networks can be of any size. The signal propagation times must be taken into account at distances over 150 km.

Optical cabling with POF/PCF or glass fiber optic cable

Fiber-optic cables are always recommended as an alternative to copper cables in environments subject to strong electromagnetic interference (EMI), if reliable equipotential bonding cannot be guaranteed, if the system is in the open air, or if no adverse effects caused by EMI are wanted.

Glass fiber optic cables are used to establish optical network topologies covering long distances, while for shorter distances, plastic fiber optic cable made of light-conducting plastics like polymer optical fiber (POF), or plastic covered glass fibers such as polymer cladded fiber (PCF), are used. Simple fiber-optic cabling for machine-level use is implemented with the SC RJ connection system for polymer optical fiber and PCF. The SC RJ connectors can be assembled especially quickly and simply on-site. The plastic fiber optic cables designed for this purpose can be used universally or specifically in festoon cable systems.

For optical cabling, e.g. for a PROFINET system, products with POF or PCF connection are used, e.g. the Industrial Ethernet Switch SCALANCE X200-4P IRT, ET 200S distributed I/O, or the SCALANCE X101-1POF media converter.

Mixed network with SCALANCE X202-2P IRT and SCALANCE X101-1POF media converter

Topologies

■ **Overview** (continued)

Fault-tolerant communication

The availability of the communication is increased by means of redundant communication connections, to which the data transmission can be switched quickly in the event of a fault.

Fault-tolerant S7-connections can be set up from S7-400H stations to

- other H stations (one- or two-channel)
- PCs (S7-REDCONNECT software required)

Increased availability by means of redundant communication connections

Overview (continued)

Gigabit at the control level

Whereas in the field level, short response times and small data message frames are in the forefront, the need for high data throughput is constantly increasing in the control level. The reason for this is the rapidly growing number of nodes and data-intensive systems such as HMI, SCADA, code reading systems, web applications or multimedia applications.

In addition to the Gigabit-capable network infrastructure, there are also Gigabit-capable system connections for PCs or SIMATIC S7-300/400. The CP 1623 communications processor for PCI Express supports a high-performance connection of the HMI/SCADA systems and simultaneously increases the reliability of the network by means of an optional external power supply.

The CP 343-1 Advanced and CP 443-1 Advanced communications processors for SIMATIC S7-300/400 implement integral network separation between the control level and field level and provide:

- Separate network connections on a module for the connection of two independent IP-subnetworks, e.g. control level is IP subnetwork 1 (Gigabit Ethernet) and the field level is IP subnetwork 2 (Fast Ethernet)
- Cross-network utilization of IT services through IP routing, such as access to Web servers
- Short response times for the lower-level field device connection with PROFINET
- Firewall for protecting the programmable controllers from unauthorized access regardless of the size of the network to be protected
- Supplementary or alternative VPN (**V**irtual **P**rivate **N**etwork) for secure authentication of the communication partners and encryption of the transmitted data

Network separation between field level and control level including Gigabit communication at the control level

2

Overview (continued)

Network separation between field level and control level

Networks often have to be separated physically from one another, but nevertheless have to communicate with one another. Reasons for network separation are deliberate load decoupling or different responsibilities within an enterprise (e.g. office and production network).

When using the CP 343-1 Advanced communications processors and CP 443-1 Advanced for S7 controllers this requirement presents no problem. With the introduction of interfaces for separate IP subnetworks in Gigabit Ethernet and Fast Ethernet on one module, the cross-network use of IT services is possible by means of static IP routing. A firewall protects programmable controllers against unauthorized access regardless of the size of the network to be protected. As an alternative or supplement, secure authentication of the communication partners and encryption of the transmitted data can be handled via a VPN (**V**irtual **P**rivate **N**etwork).

SIMATIC PCS 7 process control system with Gigabit

In the control room, two SCALANCE X-400 switches are used on the terminal bus. If a high number of nodes are connected to the plant bus, SCALANCE X414-3E switches, for example, can be used with extender modules. These are connected together to create an electrical ring with a transfer rate of 1 Gbit/s.

Several operator panels are provided and divided between the two switches so that the system can still be operated in the event of a failure. The terminal and plant buses are connected using redundant servers, e.g. with SCALANCE X408-2 also via high-performance Gigabit lines.

Use of the SCALANCE X switches in a process control system, e.g. PCS 7

Topologies

Overview (continued)

Fail-safe wireless communication with PROFIsafe

For several years, safety engineering has been integrating into standard automation on the basis of SIMATIC S7 controllers, PROFIBUS and PROFIsafe.

This range has been expanded by PROFINET-enabled components, thus providing a complete product range with failsafe controllers, failsafe I/O and a corresponding engineering environment.

PROFIsafe prevents errors such as address corruption, loss, delay, etc., when transmitting messages through continuous numbering of the PROFIsafe data, time monitoring, and authenticity monitoring using passwords and optimized cyclic redundancy check (CRC).

Fail-safe wireless communication with PROFIsafe

Overview (continued)

Secure communication with SCALANCE S and Security Integrated

SCALANCE S security modules and modules with Security Integrated offer scalable security functionality for the protection of automation networks. Security Integrated integrates the firewall and VPN security functionalities familiar from SCALANCE S into communications processors (CP 343-1 Advanced, CP 443-1 Advanced, CP 1628) and the SCALANCE M875 mobile wireless router as additional functions. Apart from IP routing, the following are supported:

- Firewall for protecting the programmable controllers from unauthorized access regardless of the size of the network to be protected.
- Supplementary or alternative VPN (Virtual Private Network) for secure authentication of the communication partners and encryption of the transmitted data
- Address translation
  - NAT (Network Address Translation) permits the use of private IP addresses in the internal network in that public IP addresses are converted to private ones
  - NAPT (Network Address and Port Translation) permits the use of private IP addresses in the internal network in that frames are converted to private IP addresses depending on the communications port used

Secure remote maintenance and protection of network segments thanks to SCALANCE S in a Gigabit network infrastructure

Topologies

■ **Overview** (continued)

For a high-performance coupling of networks, the modular Industrial Ethernet Switch SCALANCE X414-3E is available. In the case of SCALANCE X414-3E, high-speed IP routing permits communication between different IP subnetworks and routers:

- Static routing
- Dynamic routing OSPF (open shortest path first) and
- RIPv1/2 (routing information protocol)
- Redundant routing VRRP (Virtual Router Redundancy Protocol)

High-performance Layer 3 switching paired with redundant routing (VRRP)

Introduction

■ Overview

PROFINET – the Ethernet standard for automation

PROFINET is the leading Industrial Ethernet standard with more than 3 million nodes worldwide.

PROFINET increases the companies' success by accelerating processes, boosting productivity, and increasing plant availability.

Your advantages at a glance

Flexibility	Efficiency	Performance
Tailor-made plant concepts	Optimal use of resources	Increased productivity
▶ Industrial Wireless LAN	▶ One cable for all purposes	▶ Speed
▶ Safety	▶ Device/network diagnostics	▶ High precision
▶ Flexible topologies	▶ Energy efficiency	▶ Large quantity structures
▶ Open standard	▶ Easy cabling	▶ High transmission rate
▶ Web tools	▶ Fast device replacement	▶ Media redundancy
▶ Expandability	▶ Ruggedness/stability	▶ Fast start-up

G_IK10_XX_10304

Flexibility

Short response times and optimized processes are prerequisites for competitiveness in global markets, because product lifecycles are becoming shorter and shorter.

PROFINET ensures maximum flexibility in plant structures and production processes, and it enables you to implement innovative machine and plant concepts. Mobile devices, for example, can be integrated into relatively inaccessible locations.

Flexible topologies

PROFINET also enables the use of star, tree, and ring topologies in addition to the linear topology characterized by the established fieldbuses. This is made possible by means of switching technology via active network components, such as Industrial Ethernet switches and media converters, or by integrating switch functionality into field devices. This results in an increased machine and plant planning flexibility, as well as savings in cabling.

The PROFINET network can be installed without any specialist knowledge and meets all requirements relevant to the industrial environment. The PROFINET Guideline "Cabling and Interconnection Technology" provides network installation support for manufacturers and users. Symmetrical copper cables or RFI-resistant fiber-optic cables are used depending on the application. Devices from different manufacturers are easily connected via standardized and rugged plug-in connectors (up to IP65/IP67).

Thanks to the integration of switch functionality into the devices, linear topologies can be formed that are configured based on an existing machine or plant structure. This results in savings in cabling overhead and cuts down on components such as external switches.

IWLAN

PROFINET also supports wireless communication with Industrial Wireless LAN and thus opens up new application fields. For example, technologies subject to wear such as contact wires can be replaced and automated guided vehicle systems and mobile operator panels can be used.

Safety

The PROFIsafe safety profile, which has been tried and tested with PROFIBUS and which permits the transmission of standard and safety-related data on a single bus cable, can also be used with PROFINET. No special network components are required for fail-safe communication, standard switches and standard routers can be used without restrictions. In addition, fail-safe communication is equally possible via Industrial Wireless LAN (IWLAN).

Open standard

PROFINET, the open vendor-independent standard (IEC 61158/61784), is supported by PROFIBUS and PROFINET International (PI). It stands for maximum transparency, open IT communication, network security and simultaneous real-time communication.

Due to its openness, PROFINET creates the basis for a uniform automation network in the plant to which all of the machines and devices can be connected. The integration of existing parts of the plant, using PROFIBUS for example, can also be achieved without any problems through the use of routers.

Overview (continued)

Fieldbus integration via a proxy

Use of web tools

PROFINET's unrestricted support for TCP/IP permits the use of standard web services such as web servers in the device. Independently of the tool used, information from the automation level can be accessed from almost anywhere at any time using a commercially available Internet browser. This considerably simplifies commissioning and diagnostics.

Each user can decide for himself how much openness to the IT world he will permit for his machine or plant. Thus, PROFINET can be easily operated as an isolated plant network or it can be connected to the office network or the Internet via suitable security modules, such as the SCALANCE S modules. This allows new teleservice concepts or even the fast exchange of production data.

Expandability

On the one hand, PROFINET permits the easy integration of existing systems and networks without great effort. Thus, PROFINET protects the investments in existing plant units which communicate via PROFIBUS and other fieldbuses such as AS-Interface, for example.

On the other hand, additional PROFINET stations can be added at any time. Network infrastructures can be expanded using additional network components, both wired and wireless versions, even during operation.

Efficiency

Global competition means that companies must deploy their resources economically and efficiently. This applies in particular to production. PROFINET ensures more efficiency here.

Simple engineering guarantees fast commissioning, and reliable devices enable high plant availability. Comprehensive diagnostics and maintenance concepts help to reduce plant downtimes and maintenance costs to a minimum.

One cable for all purposes

PROFINET permits simultaneous fieldbus communication in isochronous mode and standard IT communication (TCP/IP) via one cable. This real-time communication for the transmission of user/process data and diagnostic data is performed on a single cable. Specific profile communication (PROFIsafe, PROFIdrive and PROFIenergy) can be integrated without additional cabling overhead. This solution provides a wide range of functions with a low degree of complexity.

Device and network diagnostics

By retaining the field-proven PROFIBUS device model, the same diagnostic information is available with PROFINET. In addition, device diagnostics also includes read-out of module-specific and channel-specific data from the devices. This enables simple and fast location of faults. In addition to the availability of device information, the top priority in network management is reliability of network operation.

The Simple Network Management Protocol (SNMP) has become established in existing networks as the de-facto standard for the maintenance and monitoring of network components and their functions. PROFINET uses this standard and provides users with the option of servicing networks using familiar tools such as the SINEMA Server network management software.

In order to facilitate the maintenance of PROFINET devices, both locally and also remotely via a secure VPN connection, application-specific Web sites in the familiar HTML standard can be created on the integral Web server of the field devices.

PROFINET/Industrial Ethernet
PROFINET

■ **Overview** (continued)

Energy efficiency

Moving toward the green factory: PROFIenergy

PROFIenergy is a profile that provides functions and mechanisms for PROFINET field devices that support energy-efficient production.

The vendor and device-independent profile defined by PNO allows the user to significantly reduce the energy consumption and costs: PROFIenergy enables specific loads that are not required to be switched off. This noticeably reduces energy costs during pauses in production. PROFIenergy facilitates automated activation and deactivation of technologically related plant sections. The coordination is performed centrally by means of a higher-level controller, and the networking via PROFINET. This means that during long pauses, as much energy as possible is saved. Plant sections that are switched off for short periods contribute to the even distribution and most efficient use of energy.

The use of PROFIenergy is made easier for the machine builder by its integration into well-known series of products. In addition, PROFIenergy is defined in such a way that the necessary function blocks can be integrated into existing automation systems at a later date.

Energy consumption without PROFIenergy

Energy consumption with PROFIenergy

Easy cabling

Stringent demands are placed on the installation of cables in the industrial environment. There is also the requirement to set up error-free industry-standard networks in the shortest possible time without specialist knowledge.

Siemens offers FastConnect, a system that meets all these requirements: FastConnect is the standards-compliant, industry-standard cabling system consisting of cables, connectors, and assembly tools for PROFINET networks.

The time spent for connecting the terminal devices is minimized thanks to the easy installation using only a single tool, and installation errors can be avoided thanks to the practical color-coding. Both copper cables and glass fiber-optic cables can be assembled on-site in this way.

Fast device replacement

PROFINET devices are identified via a name that is assigned in the configuration. When replacing a defective device, a new device can be recognized by the IO Controller by means of topology information and have a name automatically assigned to it. An engineering tool is therefore not required when replacing devices.

This mechanism can also be used during the initial commissioning of a complete plant. Quick commissioning is thus especially possible for series machines.

Ruggedness

An automation network must be able to withstand most external sources of interference. The use of Switched Ethernet prevents faults in one section of the network from influencing the entire plant network. PROFINET enables the use of fiber-optic cables especially for areas that are critically sensitive to EMI.

■ Overview (continued)

Performance

Productivity and product quality determine market success. Precise motion control, dynamic drives, high-speed controllers, and the deterministic synchronization of devices are therefore key factors in achieving superior production. They allow high production speeds and simultaneously optimized product quality.

Speed and precision

Fast motion control applications need precise and deterministic data exchange. This is implemented thanks to isochronous drive controls using Isochronous Real-Time (IRT).

PROFINET permits high-speed and deterministic communication due to IRT and isochronous mode. The different cycles of a system (input, network, CPU processing and output) are also synchronized in the case of parallel TCP/IP traffic. PROFINET's short cycle times make it possible to increase the productivity of machines and plants, and to ensure product quality through high precision.

The standardized PROFIdrive drive profile enables vendor-independent communication between CPUs and drives.

Large quantity structures

Previous limitations in the scope of the machines and systems to be implemented can be easily overcome through the use of PROFINET. With PROFINET, up to 256 field devices can now be managed by one SIMATIC Controller.

In a network, several controllers can interact with their assigned field devices. The number of field devices per PROFINET network is virtually unlimited – the entire band of IP addresses is available.

High transmission rate

By using 100 Mbit/s in full duplex mode, PROFINET achieves a significantly higher transmission rate than previous fieldbuses. Thanks to this, both the process data and other plant data can be transferred via TCP/IP without any problems. In this way, PROFINET combines the industrial requirements of simultaneously transferring fast IO data and large data quantities for other parts of the application. Even the transfer of large quantities of data such as by cameras does not affect the speed and the precision of the IO data transfer thanks to PROFINET mechanisms.

Media redundancy

Higher plant availability can be achieved by means of a redundant installation (ring topology). The media redundancy can be implemented both with the help of external switches and direct via integral PROFINET interfaces. Reconfiguration times of 200 ms can be achieved. In the case of an interruption to the communication in only one part of the ring installation, this means that a plant standstill is prevented and the necessary servicing and repair work can be carried out without time pressure.

Fast start-up

The Fast Start-Up function allows rapid start-up of PROFINET IO Devices that are connected to SIMATIC Controllers. The communication connection between the controller and the device is established in less than a second. For modular plants, individual plant parts can therefore be connected or disconnected in the shortest time. For example, the tool change can be accelerated significantly in robot applications.

■ Benefits

- PROFINET is the open Industrial Ethernet standard for automation
- PROFINET is based on Industrial Ethernet
- PROFINET uses TCP/IP and IT standards
- PROFINET is Real-Time Ethernet
- PROFINET permits seamless integration of fieldbus systems
- PROFINET supports fail-safe communication via PROFIsafe over IWLAN as well

■ Overview

Structured cabling

- Structured cabling to ISO IEC 118011/EN 50173 describes the non-application-specific, tree-like cabling of building complexes for IT purposes. A site is subdivided into the following areas:
  - Primary area (connecting the buildings of a site)
  - Secondary area (connecting the floors of a building)
  - Tertiary area (IT connection of data terminals on a floor)

The structured cabling that can be achieved with the Industrial Ethernet FastConnect System corresponds to the structure of the tertiary cabling in accordance with EN 50173 for Ethernet.

FastConnect Twisted Pair (FC)

- For structured cabling in the production hall, the FastConnect Twisted Pair cabling system is ideal (RJ45 and M12 connections). With the fast installation system for Industrial Ethernet, structured cabling from the office environment not only becomes industry compatible for installation in the production hall.

- FastConnect cables can also be assembled extremely quickly and easily on site. The RJ45 cabling technique, an existing standard, is also available in an industry-standard version that supports structured cabling (patch cables, patch field, installation cables, connection socket, connecting cable).

- With the FastConnect plugs and FastConnect cables as an alternative to structured cabling, up to 100 m cable length can be achieved for a point-to-point link (requires less patch technology).

ITP (Sub D connection method)

- For direct connection between stations and network components with Sub D connections, the ITP Standard Cable continues to be offered preassembled with Sub D plugs as a rugged connection system. This allows cable lengths of up to 100 m to be achieved without the need for patches.

■ Benefits

- Extensive product range for flexible cabling in industry
- Faster connection of data terminals thanks to safe stripping of the outer sheath and braided shield in one step
- Easy connection method (insulation-piercing contacts) for 4-core (Cat5) and 8-core (Cat6) Industrial Ethernet FC Twisted Pair installation cables
- Easy assembly for all cable types with the preadjusted FC stripping tool
- Reliable shield contacting and strain relief

■ Application

	10/100 Mbit/s	10/100/1000 Mbit/s

[2] IE TP Cord RJ45/RJ45 and IE TP Cord XP

UL approvals

UL listing (safety standard) for network cables is especially necessary for the American and Canadian markets. The requirements for the appropriate approvals depend on where the cable is routed within the building. This applies to all cables which have to be routed from a machine to a remote control cabinet and are positioned on cable racks secured on the building. Cables with UL approval have "GP" (**G**eneral **P**urpose) added to their name.

■ Design

The FastConnect system comprises:

- **Industrial Ethernet FastConnect cables** specially designed for fast connection (UL and CAT5e certified) as FC TP Standard, FC TP Flexible, FC TP Trailing, TP Torsion and FC TP Marine Cable.

- Easy stripping with the **FastConnect Stripping Tool**; the outer sheath and the braided shield are stripped accurately in one step

- The prepared cable is connected in the **FastConnect products** using the insulation displacement method.

■ Integration

A+B ≤ 10 m
A+B+C ≤ 100 m

Structured cabling to EN 50173

PROFINET/Industrial Ethernet
Cabling technology

Industrial Ethernet FastConnect

■ Overview

- With the FastConnect (FC) system for Industrial Ethernet, structured cabling from the office environment becomes industry-compatible for installation in the production hall.
- Time-saving, error-free installation on-site
- RJ45 cabling technology is used as the permanent standard
- The ideal solution for assembly of RJ45 and M12 connectors in the field area with 4-core (2 x 2) Industrial Ethernet FC cables
- The ideal solution for assembly of the IE FC RJ45 Modular Outlet with 8-core (4 x 2) Industrial Ethernet FC cables
- Mistakes are prevented thanks to color coding and the transparent contact cover
- Coordinated system of FC plug-in connectors and an extensive FC cable spectrum with appropriate UL approvals

■ Benefits

g e **t** **get** Designed for Industry

- Compliance with the Industrial Ethernet Standard PROFINET (PROFINET Cabling and Interconnection Technology Guideline[1])
- Faster connection of data terminals thanks to safe stripping of the outer sheath and braided shield in one step
- Reliable shield contact and strain relief thanks to bolt-on cover
- Excellent EMC shielding and deflection (metal housing)
- Mistakes are prevented thanks to color coding and the transparent contact cover

[1] Available as a download at www.profinet.com

2

Application

Industrial Ethernet FastConnect is a quick-assembly system for easy assembly of 4-core and 8-core Industrial Ethernet FC cables.

After stripping, the IE FC cable can be directly mounted in either the IE FC RJ45 Plug (4-core), the IE FC Outlet RJ45 (4-core) or the IE RJ45 Modular Outlet (8-core).

Steps for assembly of Industrial Ethernet copper cables with Industrial Ethernet FastConnect

Design

The complete system:

- Industrial Ethernet FC installation cables designed for fast assembly; 4-core (2x2) Cat5e;
  - IE FC TP Standard Cable GP
  - IE FC TP Flexible Cable GP
  - IE FC TP Trailing Cable GP
  - IE FC TP Trailing Cable
  - IE TP Torsion Cable
  - IE FC TP Marine Cable
  - IE FC TP FRNC Cable GP
  - IE FC TP Food Cable
  - IE FC TP Festoon Cable GP
- 8-core (4 x 2) Cat6 certified, with appropriate UL approval:
  - IE FC TP Standard Cable GP (AWG 22/AWG 24)
  - IE FC TP Flexible Cable (AWG 24)
- User-friendly stripping technique with FC Stripping Tool
- Noise-resistant FC RJ45 and FC M12 Plugs (10/100/1000 Mbit/s), an ideal solution for installation on 4 or 8-core IE FC cables at the field level thanks to the rugged metal enclosure
- The prepared cable is connected in the Industrial Ethernet FC Outlet RJ45 (10/100 Mbits/s; 4-core) or IE FC RJ45 Modular Outlet (10/100/1000 Mbits/s; 8-core) using insulation displacement

Function

The FastConnect stripping technique supports fast and easy connection of the Industrial Ethernet FC cables

- IE FC RJ45 Plug (10/100/1000 Mbit/s)
- IE FC M12 Plug PRO (10/100/1000 Mbit/s)
- IE FC Outlet RJ45 (10/100 Mbit/s)
- IE FC RJ45 Modular Outlet (10/100/1000 Mbit/s)

The data terminals and network components are connected using outlets via TP Cords.

The Industrial Ethernet FastConnect cables are specially designed for use of the Industrial Ethernet FastConnect Stripping Tool, with which the outer insulation and the braided shield can be stripped accurately in one step. The prepared cable is then connected using insulation displacement.

Approvals

UL listing (safety standard) for network cables is especially necessary for the American and Canadian markets. The requirements for the appropriate approvals depend on where the cable is routed within the building. This applies to all cables which have to be routed from a machine to a remote control cabinet and are positioned on cable racks secured on the building. OFN/OFNG cable for routing in bundles (general purpose cable).

The various connectors and cables from the FastConnect cabling system can also be used in hazardous areas (EX-Zone 2). No special approval is necessary.

IE FC RJ45 Plug 2 x 2

Overview

- Implementation of direct device connections over distances of up to 100 m with Industrial Ethernet FC installation cable 2 x 2 without patching
- Easy connection (insulation displacement contacts) for 4-core Twisted Pair installation cables (100 Mbit/s) without the need for special tools
- Error-preventing connection technique thanks to visible connection area as well as colored blade terminals
- Industry-compatible design (rugged metal housing, no easily lost small parts)
- Excellent EMC shielding and deflection (metal housing)
- Integrated strain-relief for installation cables
- Compatible to the EN 50173 (RJ45) / ISO IEC 11801 standard
- Additional strain and bending relief of plug connector possible through latching of plug on device housing, e.g. with SCALANCE X, SCALANCE S, ET 200S.

Benefits

get Designed for Industry

- Ideal solution for installing RJ45 plug-in connectors in the field level
- Time-saving, error-free installation using the FastConnect system
- RJ45 plug-in connector is resistant to interference thanks to the rugged metal housing
- Reliable shield attachment and strain relief are integrated
- Mistakes are prevented thanks to color coding and the transparent contact cover
- A compatible system of Industrial Ethernet FastConnect plug-in connectors and a comprehensive range of FastConnect cables with the appropriate UL approvals and PROFINET compatibility

Application

The compact, rugged design of the connectors makes the FC RJ45 Plug suitable for use in both industrial environments and on office equipment.

The Industrial Ethernet FastConnect RJ45 Plugs 2 x 2 permit quick and easy installation of the Industrial Ethernet FastConnect installation cables 2 x 2 (4-core twisted pair cables) in the field.

The Industrial Ethernet FastConnect Stripping Tool for preparing the end of a cable (stripping the jacket and shield in one step) allows simple handling and fast, reliable fitting of the cable connector to the cable. As all the cable connector parts are captive, it can also be fitted in difficult conditions.

The plug-in connectors enable point-to-point links to be implemented (100 Mbit/s) for Industrial Ethernet between two data terminals/network components up to 100 m without the need for patches.

Use of FastConnect cables 2 x 2 with IE FC RJ45 Plug 2 x 2

2

Design

Industrial Ethernet FC RJ45 Plugs are available in three designs:

- With 180° (straight) cable outlet
- With 145° (angled) cable outlet (SIMOTION and SINAMICS, for example)
- With 90° (angled) cable outlet (for ET 200S, for example)

They are used for optimized connection of Industrial Ethernet FastConnect cables to data terminals and network components. The plugs have a rugged, industry-compatible metal housing that provides optimum protection against faults in data communication.

The 4 integrated insulation displacement contacts make contacting of the FC cable versions easy and error-free. After the stripped cable end has been inserted into the insulation displacement terminations (which have been hinged open), the latter are pressed down for reliable contacting of the conductors.

Thanks to their compactness, the plug-in connectors (IE FC Plug 180°) can be used on devices with individual sockets and on devices with multiple sockets (blocks).

① Strip the IE FC cable 2x2 using stripping tool and fan out the wires according to color coding on the contact cover of the FC RJ45 plug.

② Open casing of the FC RJ45 plug and insert wires according to color coding as far as the end stop.

③ Press down contact cover to make contact with the wires.

④ Casing
Close casing cover and press together with lower connector casing.

⑤ Using a screwdriver, turn locking ring through 90° to ensure that cable is gripped tightly.

G_IK10_XX_30026

Data terminals with a suitable bracket on the housing provide additional tension and bending relief for the plug-in cable.

Function

The IE FC RJ45 Plugs are used to install uncrossed 100 Mbit/s Ethernet connections up to 100 m without the use of patches. Crossed cables can also be installed by swapping the transmit and receive pair in a plug.

When the housing is open, color markings on the contact cover make it easier to connect the cores to the blade terminals. The user can check that contact has been made correctly through the transparent plastic material of the contact cover.

PROFINET/Industrial Ethernet
Cabling technology

IE FC RJ45 Plug 4 x 2

2

■ Overview

- Implementation of direct device connections of up to 90 m with Industrial Ethernet FC installation cable 4 x 2 without using patch technology
- Easy connection (insulation displacement contacts) for 8-core twisted pair installation cables (10/100/1000 Mbit/s) without the need for special tools
- Error-minimizing connection technique thanks to visible connection area as well as colored insulation displacement termination
- Industry-compatible design (rugged metal housing, no easily lost small parts)
- Excellent EMC shielding and deflection (metal housing)
- Integrated strain-relief for installation cables
- Compatible with the EN 50173 (RJ45) / ISO IEC 11801 standard
- Additional strain and bending relief of plug connector possible through latching of plug on device housing, e.g. with SCALANCE X, SCALANCE S.

■ Benefits

g e t — Designed for Industry

- Ideal solution for installation of RJ45 plugs in the field
- Time-saving, error-free installation due to FastConnect system
- Noise-resistant RJ45 plug connector due to rugged metal housing
- Reliable shield attachment and strain relief are integrated
- Mistakes are prevented thanks to color coding and the transparent contact cover
- Coordinated system comprising Industrial Ethernet FastConnect plug-in connectors and an extensive range of FastConnect cables with corresponding UL approvals

■ Application

The compact, rugged design of the connectors makes the FC RJ45 Plug suitable for use in both industrial environments and on office equipment.

The Industrial Ethernet FastConnect RJ45 Plug 4 x 2 permits quick and easy installation of the Industrial Ethernet FastConnect installation cables 2 x 4 (8-core twisted pair cables) in the field.

The Industrial Ethernet FastConnect Stripping Tool for preparing the end of a cable (stripping the jacket and shield in one step) allows simple handling and fast, reliable fitting of the cable connector to the cable. As all the cable connector parts are captive, it can also be fitted in difficult conditions.

The new plug-in connector enables point-to-point links to be implemented (10/100/1000 Mbit/s) for Industrial Ethernet between two data terminals/network components up to 90 m apart without the need for patches.

Use of FastConnect cables 4 x 2 with IE FC RJ45 plug 4 x 2

2

Design

The Industrial Ethernet FC RJ45 Plug 4 x 2 is available with a 180° (straight) cable outlet.

It is the ideal method of connecting an Industrial Ethernet FastConnect cable to data terminals and network components. The plug has a rugged, industry-compatible metal housing that provides optimum protection against faults in data communication.

The eight integrated insulation displacement contacts make contacting of the FC cable versions 4 x 2 and 2 x 2 easy and error-free. After the stripped cable end has been inserted in the insulation displacement terminals, the conductors make contact when the casing is closed.

Owing to their compact size, the plug connectors can be used both on devices with individual jacks and on devices with multiple jacks (blocks).

Data terminals with a suitable bracket on the housing provide additional tension and bending relief for the plug-in cable.

Function

The IE FC RJ45 Plug 4 x 2 is used to install uncrossed 10/100/1000 Mbit/s Ethernet connections up to 90 m without the use of patches. Crossed cables can also be installed by swapping the transmit and receive pair in a plug.

With the casing open, colored markers on the contact element make it simple to connect the cores to the insulation displacement contacts. The transparent synthetic material of the contact element allows users to check the contacts themselves.

2

Ordering data	Order No.		Order No.
IE FC RJ45 Plug 4 x 2		**IE FC TP Standard Cable GP 4 x 2**	
RJ45 plug connector for Industrial Ethernet (10/100/1000 Mbit/s) with a rugged metal housing and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface		8-core, shielded TP installation cable for universal applications; with UL approval; sold by the meter; max. length 1000 m, minimum order 20 m	
		• AWG 22, for connection to IE FC RJ45 Modular Outlet	**6XV1 870-2E**
• 1 pack = 1 item	**6GK1 901-1BB11-2AA0**	• AWG 24, for connection to IE FC RJ45 Plug 4 x 2	**6XV1 878-2A**
• 1 pack = 10 items	**6GK1 901-1BB11-2AB0**		
• 1 pack = 50 items	**6GK1 901-1BB11-2AE0**		
IE FC stripping tool	**6GK1 901-1GA00**	**IE FC TP Flexible Cable GP 4 x 2**	
Pre-adjusted stripping tool for fast stripping of Industrial Ethernet FC cables		8-core, shielded TP installation cable for occasional movement; with UL approval; sold by the meter; max. quantity 1000 m, minimum order 20 m	
		• AWG 24, for connection to IE FC RJ45 Plug 4 x 2	**6XV1 878-2B**
		IE FC blade cassettes (5 mm)	**6GK1 901-1GB01**
		Replacement blade cassette for the Industrial Ethernet stripping tool; for use with IE FC RJ45 Plugs and Modular Outlet, 5 items	

2

■ Overview

- Data plug-in connectors suitable for on-site assembly for IE FC TP and POF/PCF cables for transmitting data up to 100 Mbit/s
- Power plug-in connector suitable for on-site assembly for transmitting 2 x 24 V between Industrial Ethernet stations
- Degree of protection IP65/67
- The plug-in connectors make contact using a push-pull mechanism.

IE FC RJ45 Plug PRO / IE RJ45 Plug PRO

- FastConnect Industrial Ethernet RJ45 plug-in connector suitable for on-site assembly for SCALANCE X-200IRT PRO switches, ET 200pro and SIMATIC RF systems
- Easy connection (insulation displacement contacts) for 4-core twisted pair installation cables (100 Mbit/s) with or without FastConnect quick-assembly system, without the need for special tools
- Industrial design (rugged plastic housing)
- Good EMC shielding and discharge

IE SC RJ Plug PRO

- Industrial Ethernet SC RJ plug-in connector suitable for on-site assembly of:
  - POF cables for SCALANCE X-200IRT PRO and SIMATIC ET 200pro switches
  - PCF cables for SCALANCE X-200IRT PRO switches
- Industrial design (rugged plastic housing)

Power Plug PRO

- 5-pin power plug-in connector suitable for on-site assembly, for 2 x 24 V voltage supply of the SCALANCE X-200IRT PRO switches, SIMATIC ET 200pro and SIMATIC RF systems

■ Benefits

g **e** **t**
get   Designed for Industry

- Simple and flexible assembly on site for application-specific plug-in cables through data and power plug-in connectors suitable for on-site assembly in degree of protection IP65/67

■ Application

IE FC RJ45 Plug PRO and IE SC RJ Plug PRO (POF or PCF) are plug-in connectors with push pull device connection that thanks to their high degree of protection (IP65/67) are used outside cabinets along with suitable end devices and network components with a high degree of protection. Their silicon-free design enables them to also be used in the automobile industry, e.g. in paint shops.

PROFINET/Industrial Ethernet
Cabling technology

IE FC M12 Plug PRO

■ Overview

FastConnect (FC) plug-in connectors that can be assembled in the field for transmission of data (up to 1000 Mbit/s) between Industrial Ethernet nodes with IP65/IP67 degree of protection

Industrial Ethernet FC M12 Plug PRO (D coded)

- Industrial Ethernet M12 plug-in connector with FastConnect connection system for on-site assembly for SCALANCE X208PRO, IM 154-4 PN and SIMATIC RF systems
- Easy connection (insulation displacement contacts) for 4-core twisted pair FC installation cables (10/100 Mbit/s) without the need for special tools
- Fault-preventing connection method thanks to visible contacting area and color-coded insulation piercing connecting devices
- Industry-compatible design (rugged metal housing)
- Excellent EMC shielding and deflection (metal housing)
- Integrated strain-relief for installation cables

Industrial Ethernet FC M12 Plug PRO 4x2 (X-coded)

- Industrial Ethernet M12 plug connectors, which can be assembled in the field, for on-site installation for SCALANCE W
- Easy connection (insulation displacement contacts) for 8-core twisted pair FC installation cables (10/100/1000 Mbit/s) without the need for special tools
- Fault-preventing connection method thanks to visible contacting area and color-coded insulation piercing connecting devices
- Industry-compatible design (rugged metal housing)
- Excellent EMC shielding and deflection (metal housing)
- Integrated strain-relief for installation cables

Industrial Ethernet panel feedthrough

- Control cabinet feedthrough for conversion from M12 connection method (D coded, IP65/IP67) to RJ45 connection method (IP20)

Control cabinet IE Panel feedthrough

■ Benefits

get Designed for Industry

- Easy installation on-site for application-specific M12 plug-in cables by means of FastConnect M12 plug-in connectors (IE FC M12 Plug PRO, D-coded, and IE M12 Plug PRO 4x2, X-coded), which can be assembled in the field
- Simple assembly of adapter cables for the transition from IP65/67 degree of protection into the IP20 area within the same control cabinet by connecting the IE FC M12 Plug PRO and IE FC RJ45 Plug 2x2
- Reliable screen contact and strain relief are integrated
- Harmonized system made up of Industrial Ethernet FastConnect plug-in connectors and an extensive range of FastConnect cables with corresponding UL approvals and PROFINET conformity

PROFINET/Industrial Ethernet
Cabling technology

IE FC TP Cable 2 x 2

Overview

- 4-core FastConnect installation cables for structured Fast Ethernet cabling with special design for fast installation
- Easy stripping with the FastConnect Stripping Tool; the outer sheath and the braided shield are stripped accurately in one step
- Connection to FastConnect products using insulation displacement
- Exceeds Category 5 (Cat5e) of the international cabling standards ISO/IEC 11801 and EN 50173
- PROFINET-compatible
- UL approval
- Different versions for different fields of application (e.g. trailing, food, marine)
- High interference immunity thanks to double shielding
- Easy length measurement thanks to printed meter markings

Benefits

get — Designed for Industry

- Time-saving due to simple and quick assembly with FastConnect cables 2 x 2 to Industrial Ethernet FC Outlet RJ45 (10/100 Mbit/s), Industrial Ethernet FC RJ45 Plug 180/90, or IE FC M12 Plug PRO
- Versatile application due to special bus cables
- Network is immune to interference thanks to double shielded cables and a uniform grounding concept
- Silicone-free, therefore suitable for use in the automotive industry (for example on paint lines)

Application

For the construction of Industrial Ethernet networks (4-core), different cable types are offered to suit the different types of application.

In general, the listed Industrial Ethernet FC cables IE FC Cable 2 x 2 must be used.

Note:
You will find other specifications of the network topology in the manual for TP and fiber optic networks.

UL approvals

Different cable versions are offered with appropriate UL approvals for laying in cable bundles and cable racks according to the specifications of NEC (National Electrical Code) Article 800/725. These are identified as GP (General Purpose).

Design

The FastConnect (FC) Industrial Ethernet cables IE FC Cable 2 x 2 are designed with radial symmetry and therefore allow the use of the FC Stripping Tool The IE FC Outlet RJ45 and the IE FC Plugs can therefore be attached quickly and easily.

- The double shield makes it especially suitable for routing through industrial areas with strong electro-magnetic fields
- Easy connection to the insulation displacement contacts of the IE FC plug without the need for special tools
- System-wide grounding concept can be implemented through the outer shield of the bus cable as well as through the grounding concept of the IE FC Outlet RJ45 and the IE FC Plugs
- Printed meter marks

Design (continued)

Cable types

- *IE FC TP Standard Cable GP 2 x 2:*
  Standard bus cable with rigid cores specially designed for fast installation;
  four rigid cores connected in a four-branch star

- *IE FC TP Flexible Cable GP 2 x 2:*
  Flexible bus cable for the special application of occasional motion control;
  four stranded cores connected in a four branch star

- *IE FC TP FRNC Cable GP 2 x 2:*
  Flexible, halogen-free cable for use in buildings
  (FRNC= Flame Retardant Non Corrosive);
  four conductors (flexible leads) stranded into star-quad for occasional movement

- *IE FC TP Trailing Cable GP / IE FC TP Trailing Cable 2 x 2:*
  Highly flexible bus cable for the special application of constant motion control in a cable carrier, e.g. for continuously moving machine parts;
  four stranded cores connected in a four branch star

- *IE FC Festoon Cable GP 2 x 2:*
  Flexible cable for special use in constant movement in a cable trail/festoon arrangement, e.g. on crane systems;
  four cores (stranded) in twisted quads

- *IE TP Torsion Cable 2 x 2:*
  Highly flexible bus cable for the special application of continuous motion control, e.g. for use with robots;
  stranded cores

- *IE FC TP Food Cable 2 x 2:*
  Flexible cable for special use in the food and beverages industry;
  four cores (stranded) in twisted quads

- *IE FC TP Marine Cable 2 x 2:*
  Bus cable for marine applications;
  four cores (stranded) connected in a four branch star, halogen-free, certified for marine applications

Product overview IE FC TP Cable 2 x 2

More information

Installation instructions

The bus cables are supplied by the meter with meter marks printed on them.

FastConnect

With the help of Industrial Ethernet FastConnect Stripping Tool, it is possible to strip the outer sheath and shield of Industrial Ethernet FastConnect cables 2 x 2 to the right length in one step. The IE Outlet RJ45 and the PROFINET-compatible plug-in connectors IE FC RJ45 and IE FC M12 can be connected quickly and easily to the Industrial Ethernet FC cable 2 x 2.

Cable routing

During storage, transport and cable laying, keep both ends sealed with a shrink-on cap; comply with the permissible bending radii and tensile load.

2

PROFINET/Industrial Ethernet
Cabling technology

IE FC TP Cable 4 x 2

Overview

- 8-core FastConnect installation cables for cabling system with Gigabit capability (AWG22 and AWG24 versions)
- Easy stripping with the FastConnect Stripping Tool; the outer sheath and the braided shield are stripped accurately in one step
- Connection to IE FC RJ45 Modular Outlet (AWG22) or IE FC RJ45 Plug 4 x 2 (AWG24) using insulation displacement
- Satisfies Category 6 (Cat6) of the international cabling standards ISO/IEC 11801 and EN 50173
- UL approval
- Easy length measurement thanks to printed meter markings

Benefits

get — Designed for Industry

- Time-saving due to quick and easy assembly using FastConnect cables 4 x 2 on IE FC RJ 45 Modular Outlet or IE FC RJ45 Plug 4 x 2 or IE FC M12 Plug PRO (X-coded)
- Simple and error-free construction of an 8-core cabling system with Gigabit capability
- Due to the 8-core cabling, you can either implement two Industrial Ethernet connections for Fast Ethernet (with IE FC RJ 45 Modular Outlet) or one Gigabit Ethernet
- Noise-immune network due to a consistent grounding concept.

Application

The 8-core cabling system of SIMATIC NET allows transmission rates of 10/100/1000 Mbit/s for Ethernet as with the service-independent cabling from the office environment. This permits the transition from the 4-core Industrial Ethernet cabling system to the 8-core cabling system with Gigabit capability.

The IE FC TP Standard Cable GP 4x2 (AWG22) must be used in conjunction with the IE FC Modular Outlet and the TP Cords for constructing Industrial Ethernet networks (8-core) up to 100 m.

IE FC TP Standard Cable 4x2 (AWG22)

The IE FC TP Standard Cable GP 4x2 (AWG22) must be used in conjunction with the IE FC Modular Outlet and the TP Cords for constructing Industrial Ethernet networks (8-core) up to 100 m.

IE FC TP Cable 4x2 (AWG24)

For direct connection without using patch technology, the IE FC RJ45 Plug 4 x 2 and the IE FC TP Cable 4 x 2 (AWG24) of up to 90 m can be used.

Note:
You will find other specifications of the network topology in the manual for TP and fiberoptic networks.

UL approvals

The IE FC TP Cable GP 4 x 2 (AWG22 and AWG24) has the relevant UL approvals for laying in cable bundles and cable racks according to the specifications of NEC (National Electrical Code) Article 800/725.

Design

The FastConnect (FC) Industrial Ethernet cables IE FC Cable 4 x 2 (AWG22 and AWG24) are designed with radial symmetry and therefore allow the use of the IE FC Stripping Tool. The IE FC RJ45 Modular Outlet and the IE FC RJ45 Plug 4 x 2 can then be connected quickly and easily by means of insulation displacement contacts without the need for special tools.

■ **Design** (continued)

Cable types

- *IE FC Standard Cable GP 4 x 2 (AWG22):*
  Standard bus cable with rigid cores specially designed for fast mounting on IE FC RJ45 Modular Outlet;
  with appropriate UL approval (General Purpose) for laying in cable bundles and on cable racks according to the specifications of the NEC (National Electrical Code) Article 800/725.

- *IE FC Standard Cable GP 4 x 2 (AWG24):*
  Standard bus cable with rigid cores specially designed for fast mounting on IE FC RJ45 Plug 4 x 2;
  with appropriate UL approval (General Purpose) for laying in cable bundles and on cable racks according to the specifications of the NEC (National Electrical Code) Article 800/725.

- *IE FC Flexible Cable GP 4 x 2 (AWG24):*
  Bus cable with flexible cores for occasional movement and specially designed for fast mounting on IE FC RJ45 Plug 4 x 2;
  with appropriate UL approval (General Purpose) for laying in cable bundles and on cable racks according to the specifications of the NEC (National Electrical Code) Article 800/725.

■ **Integration**

System configuration with IE FC RJ45 Modular Outlet 100 Mbit/s and 1000 Mbit/s

• **With 1GE insert;** replaceable insert for 1 x 1000 Mbit/s interfaces	**6GK1 901-1BE00-0AA2**		
• **With power insert;** replaceable insert for 1 x 24 V DC and 1 x 100 Mbit/s interface	**6GK1 901-1BE00-0AA3**		

More information

Installation instructions

The bus cable is supplied by the meter with meter marks printed on it.

FastConnect

With the help of Industrial Ethernet FastConnect Stripping Tool, it is possible to strip the outer sheath and shield of the Industrial Ethernet FastConnect cable 4 x 2 to the right length in one step. This allows the IE FC RJ45 Modular Outlet to be attached quickly and easily to the Industrial Ethernet FC cable 4 x 2.

Cable routing

During storage, transport and cable laying, keep both ends sealed with a shrink-on cap; comply with the permissible bending radii and tensile load.

Overview

- Industry-standard Industrial Ethernet hybrid cable for transmitting data (10/100 Mbit) and power (24 V/400 mA)
- The IE Hybrid cable 2x2 + 4x0.34 contains:
  - Industrial Ethernet cable 2 x 2 Cat5e, shielded as twisted quad (stranded, 4-core)
  - four power cores 0.34 mm^2 (stranded)

Benefits

get   Designed for Industry

- Simple installation thanks to insulation displacement connection in the IE FC RJ45 Modular Outlet and with hybrid connectors on SCALANCE W788-xPRO/RR and W74x-1PRO/RR
- Reduced installation costs since only one cable has to be installed to supply remote nodes (e.g. SCALANCE W)
- Halogen-free cable design for universal use in the industrial and office areas
- Rugged, UV-resistant industrial cable with UL approval

Application

The IE Hybrid cable 2x2 + 4x0.34 and the IE FC RJ45 Modular Outlet with Power Insert can be used to supply remote nodes (e.g. SCALANCE W) simultaneously with data (10/100 Mbit/s) and power. Having both data and power on one cable leads to a significant reduction of installation costs.

A maximum of 80 m can be covered between the IE FC RJ45 Modular Outlet and SCALANCE W, with an additional 6 m patch cable on the Modular Outlet.

Network structure with IE FC RJ45 Modular Outlet and Power Insert for supplying the SCALANCE W788-xPRO/RR Access Points and the SCALANCE W74x-1PRO/RR client modules

Design

Rugged, halogen-free Ethernet hybrid cable with four shielded, flexible data cores (AWG22, twisted quad) and four power cores (0.34 mm^2) for transmitting data and power.

The IE Hybrid cable 2x2 + 4x0.34 is available in customized lengths.

M12 Power Connecting Cable M12-180/M12-180	
Flexible 4-core power connecting cable, assembled with A-coded 5-pin M12 connector and A-coded, 5-pin M12 socket to supply the ET 200 with 24 V DC; length:	
• 0.3 m	**6XV1 801-5DE30**
• 0.5 m	**6XV1 801-5DE50**
• 1.0 m	**6XV1 801-5DH10**
• 1.5 m	**6XV1 801-5DH15**
• 2.0 m	**6XV1 801-5DH20**
• 3.0 m	**6XV1 801-5DH30**
• 5.0 m	**6XV1 801-5DH50**
• 10 m	**6XV1 801-5DN10**
• 15 m	**6XV1 801-5DN15**

	Order No.
Additional components	
7/8" plug-in connector	
Plug with axial cable outlet for field assembly for ET 200, 5-core, plastic enclosure, 1 pack = 5 items	
• Male pins	**6GK1 905-0FA00**
• Socket insert	**6GK1 905-0FB00**
7/8" Power T-Tap PRO	**6GK1 905-0FC00**
Power T-piece for ET 200 with two 7/8" socket inserts and one 7/8" pin insert 1 pack = 5 items	
Signaling Contact M12 Cable Connector PRO	**6GK1908-0DC10-6AA3**
Socket for connection of SCALANCE X208PRO for signaling contact; 5-pole, B-coded, with assembly instructions; 3 items	
Power M12 Cable Connector PRO	**6GK1 907-0DC10-6AA3**
Socket for connection of SCALANCE W-700 for 24 V DC supply voltage; 4-pole, A-coded, with assembly instructions, 3 items	
Power M12 Plug PRO	**6GK1 907-0DB10-6AA3**
Plug for connection to PS791-1PRO power supply for 24 V DC supply voltage; 4-pole, A-coded, with assembly instructions, 3 items	
SIMATIC NET Manual Collection	**6GK1 975-1AA00-3AA0**
Electronic manuals for communication systems, communication protocols, and communication products; on DVD, German/English	

More information

Cable routing:

During storage, transport and cable laying, keep both ends sealed with a shrink-on cap.

Comply with the permissible bending radii and tensile load!

Note:

You can order components supplementary to the SIMATIC NET cabling range from your local contact.

E-mail: juergen.hertlein@siemens.com

■ Overview

- Patch cable, available as preassembled cables (max. length 10 m)
- With 2 x 2 cores for 10/100 Mbit/s and 4 x 2 cores for 10/100/1000 Mbit/s Ethernet
- Small cable diameter
- Category Cat5e (2 x 2) and Cat6 (4 x 2) of the international cabling standards ISO/IEC 11801 and EN 50173

■ Benefits

g e t   **get**   Designed for Industry

- Simple connection of terminals with an RJ45 interface to the interference-proof Industrial Ethernet FC cabling system (10/100/1000 Mbit/s)
- Quick and error-free commissioning thanks to pre-assembled, factory-tested patch cables
- Simple cable laying due to small cable diameter
- Silicone-free, therefore suitable for use in the automotive industry (for example on paint lines)
- Color-coded RJ45 connectors for differentiation between twisted and non-twisted lines
  - Twisted: RJ45 connector red on both sides
  - Non-twisted: RJ45 connector green on both sides

PROFINET/Industrial Ethernet
Cabling technology

IE TP Cord

2

Application

IE TP Cord can be used to directly connect individual components (10/100 Mbit/s)

If components that do not support autocrossing are used,
an IE TP XP cord must be used between network components or terminals.

IE TP Cord RJ45/RJ45 can be used to directly connect individual components (10/100/1000 Mbit/s)

Design

- 2 x 2 cores for 10/100 Mbit/s transmission rate;
  4 x 2 cores for 10/100/1000 Mbit/s transmission rate
- Two cores with two dummy elements twisted into a pair.
- Each pair is encased in plastic film and shielded with a plastic-clad aluminum foil
- Outer woven shield around all pairs comprising tinned copper wires
- Plastic sheath (PVC)

IE TP Cord is available as TP Cord 4 x 2, pre-assembled cables in the following versions:

- *IE TP Cord RJ45/RJ45*
  with 2 x RJ45 plugs
- *IE TP XP Cord RJ45/RJ45*
  with 2 x RJ45 plugs, send and receive cables are twisted.

IE TP Cord is available as TP Cord 2 x 2, pre-assembled cables in the following versions:

- *IE TP Cord 9/RJ45*
  with one 9-pole Sub-D connector and one RJ45 connector
- *IE TP XP Cord 9/RJ45*
  with one RJ45 connector and one 9-pole Sub-D connector, send and receive cable are twisted
- *IE TP Cord 9-45/RJ45*
  with one RJ45 connector and one 9-pole Sub-D connector, 45° cable outlet
- *IE TP XP Cord 9-45/RJ45*
  with one RJ45 connector and one 9-pole Sub-D connector, 45° cable outlet; send and receive cable are twisted
- *IE TP XP Cord 9/9*
  with two 9-pole Sub-D connectors, send and receive cable are twisted.
- *IE TP Cord RJ45/15*
  with one RJ45 connector and one 15-pole Sub-D connector; this is used to directly connect data terminals with ITP interfaces to network components with an RJ45 interface.
- *IE TP XP Cord RJ45/15*
  with one RJ45 connector and one 15-pole Sub-D connector, twisted send and receive cable; used for direct connection of a data terminal with 15-pole Sub-D connector to a data terminal with RJ45 plug.
- *IE TP Converter Cord 15/RJ45*
  with a 15-pole Sub-D socket with slide locking and an RJ45 plug. A retaining clip clamps it in place. IE TP Converter Cord 15/RJ45 2 x 2 is used to connect data terminals with an RJ45 interface to the ITP cabling system, e.g. over the ITP Standard 9/15 cable.

Function

The flexibility of the cable ensures easy installation, for example in a control cabinet, or to connect equipment in a control room. The maximum length of an IE TP Cord is 10 m.

Adapter cables are used to connect devices with a 9-pin ITP interface to devices with an RJ45 interface.

The IE TP Converter Cord 15/RJ45 is used to connect devices with a 15-pin ITP interface to devices with an RJ45 interface.

Overview

Flexible connecting cables for the transmission of data
(up to 100 Mbit/s) or energy between Industrial Ethernet stations
with IP65/IP67 degree of protection

Industrial Ethernet Connecting Cable M12-180/M12-180 (D-coded)

- Pre-assembled connecting cable
  (IE FC TP Trailing Cable GP) for connecting Industrial
  Ethernet nodes (such as SIMATIC ET 200,
  SCALANCE X208PRO and SIMATIC RF systems) with
  IP65/IP67 degree of protection

- For transmission rates of 10/100 Mbit/s

Industrial Ethernet Connecting Cable M12-180 (D-coded)/IE FC RJ45 Plug-145

- Pre-assembled connecting cable
  (IE FC TP Trailing Cable GP) for connecting Industrial
  Ethernet nodes (such as SIMATIC ET 200,
  SCALANCE X208PRO and SIMOTION) with IP65/IP67 degree
  of protection

- For transmission rates of 10/100 Mbit/s

Power Connecting Cable M12-180/M12-180 (A-coded)

- Pre-assembled connecting cable (4-core power cable,
  4 x 0.75 mm^2) for connecting Industrial Ethernet nodes
  (such as SIMATIC ET 200, SCALANCE X208PRO) with
  IP65/IP67 degree of protection

- For power transfer (24 V DC, 4-pin)

Benefits

g e**get** t   Designed for Industry

- Time-saving and fault-free connection of terminal stations
  by means of pre-fabricated connection cables
- Reliable screen contact and strain relief are integrated
- Comprehensive product range with different lengths and
  corresponding UL approvals and PROFINET conformity

2

Overview

- Simple design of structured twisted-pair cabling
- Extremely short installation times thanks to insulation displacement method
- Rugged full-metal module certified according to Category 5
- Reliable shield contact and strain relief thanks to bolt-on cover
- Color marking prevents errors

Benefits

g e t   Designed for Industry

- Simple connection of network components or terminals to the interference-proof Industrial Ethernet FC cabling system
- Time-saving and error-free installation thanks to FC cables and pre-assembled TP Cords (10/100 Mbit/s)
- Interference-proof thanks to rugged metal enclosure and flexible mounting options (DIN rail, direct mounting)
- Reliable shield contact and strain relief thanks to bolt-on cover
- Color marking prevents errors

Application

The IE FC Outlet RJ45 is used as a transition from the rugged Industrial Ethernet FC cables used in the industrial environment to prefabricated TP Cord cables (10/100 Mbit/s) using an RJ45 socket.

By connecting several IE FC Outlet RJ45 devices in series, a patch field can be constructed with the required connection density (e.g. 16 outlets over 19" width).

If components that do not support autocrossing are used
an IE TP XP cord must be used between two network components or terminals.

G_IK10_XX_10110

IE TP Cord can be used for patch technology with IE FC Outlet RJ45 (10/100 Mbit/s)

2

■ Design

The IE FC Outlet RJ45 has a rugged metal housing and satisfies Category 5 of the international cable standard ISO/IEC 11801 and EN 50173. It is suitable both for mounting on rails and wall mounting by means of four through holes.

The Outlet RJ45 can also be mounted behind a metal plate with a cutout (e.g. in a control cabinet).

The Outlet RJ45 has the following connections

- 4 insulation-piercing contacts for connecting the Industrial Ethernet FC cable 2 x 2 (contacts are color coded)
- RJ45 socket with dust protection cap for connecting different TP Cord cables (10/100 Mbit/s).

■ Function

The Industrial Ethernet FC Outlet RJ45 is attached directly to the Industrial Ethernet FC cable 2 x 2.

For connection between IE Outlet RJ45 and network components or a terminal device, various preassembled RJ45 patch cables (10/100 Mbit/s) are available.

PROFINET/Industrial Ethernet
Cabling technology

IE FC RJ45 Modular Outlet

2

■ Overview

- Simple connection technology (insulation displacement contacts) for 8-core Industrial Ethernet FastConnect twisted pair installation cables (Cat6)
- Safe connection technology thanks to visible connection area
- Industry-standard design
  - Rugged metal housing
  - Dust caps
- Wall and DIN rail mounting inside or outside control cubicles thanks to IP40 protection
- Good electromagnetic shielding and conduction due to metal housing
- Integral strain relief for 8-core installation cables
- Replaceable inserts for
  - 2 x Fast Ethernet connection
    IE FC RJ45 Modular Outlet insert 2FE
  - 1 x Gigabit Ethernet connection
    IE FC RJ45 Modular Outlet insert 1GE
  - 1 x Fast Ethernet connection, 1 x 24 V DC connection
    IE FC RJ45 Modular Outlet Power Insert

■ Benefits

get   Designed for Industry

- Easy and problem-free assembly due to integrated color-coded insulation displacement contacts
- Time-saving and trouble-free installation with 8-core Industrial Ethernet FC TP installation cables
- Universal use due to replaceable inserts (insert for two 10/100 Mbit/s ports, one 1000 Mbit/s port or one 24 V DC power supply and 100 Mbit/s port)
- Wide operating temperature range (-20 °C to +70 °C)
- Reliable shield contact and strain relief thanks to bolt-on cover
- Protection of investment, as a 100 Mbit/s network can be upgraded without difficulty to a 1000 Mbit/s network by replacing the insert without having to release the cable contacts

■ Application

The 8-core cabling system of SIMATIC NET allows transfer rates of 10/100/1000 Mbit/s for Ethernet and for the service-independent cabling from this office environment. Thanks to the 8-core cabling it is now possible to implement two Industrial Ethernet connections for Fast Ethernet, but in future it will also be possible to upgrade to a Gigabit Ethernet connection. This implements the transition from 4-core Industrial Ethernet FastConnect TP cabling system to the 8-core Gigabit cabling system.

The FC RJ45 Modular Outlet base module can optionally be equipped with three different replaceable inserts, as follows:
- IE FC RJ45 Modular Outlet Insert 2FE with
  2 x RJ45 sockets for 100 Mbit/s systems
- IE FC RJ45 Modular Outlet Insert 1GE with
  1 x RJ45 socket for 1000 Mbit/s systems
- IE FC RJ45 Modular Outlet Power Insert for SCALANCE W IWLAN system with
  1 x 24 V, 1 x RJ45 socket

Thus it is possible not only to implement individual device connections, but also 100 Mbit/s dual connections.

By replacing the insert, it is possible to switch from network structures that are operated at transfrer rates of 100 Mbit/s to structures with rates of 1000 Mbit/s. Replacement of the cabling is not necessary (permanent cabling).

Like the 4-wire cabling system, the Gigabit cabling system with the IE FC RJ45 Modular Outlet also takes the conditions in the field of industrial automation into account. No special tools are required for the assembly; the same FC stripping tool is used as for the 4-wire system.

8-wire FC installations cables are used for the cabling (AWG 22):
- IE FC Standard Cable 4 x 2;
  for fixed routing as standard type for the IE FC RJ45 Modular Outlet Inserts 2FE and 1GE
- IE Hybrid Cable 2x2 + 4x0.34 for the IE FC RJ45 Modular Outlet with Power Insert

Max. distance which can be covered between two IE FC Modular Outlets using IE FC Standard Cable is 90 m; the total length of the patch cords to the terminal units at each end must not exceed 10 m.

Application (continued)
Application examples

If components that do not support autocrossing are used,
an IE TP XP cord must be used between two network components or terminals.

IE TP Cord can be used with IE FC RJ45 Modular Outlet with Insert 2FE (10/100 Mbit/s)

If components that do not support autocrossing are used,
an IE TP XP cord must be used between two network components or terminals.

IE TP Cord RJ45/RJ45 can be used for patch technology with IE FC RJ45 Modular Outlet with Insert 1GE (10/100/1000 Mbit/s)

PROFINET/Industrial Ethernet
Cabling technology

IE FC RJ45 Modular Outlet

2

Application (continued)

IE TP Cord can be used with IE FC RJ45 Modular Outlet with Power Insert (10/100 Mbit/s)

Design

IE FC RJ45 Modular Outlet (base modules)

- Robust metal housing, complies with Category 6 of the international cabling standards ISO/IEC 11801 and EN 50173
- Suitable both for DIN rail and wall mounting
- Thanks to its high degree of protection IP40, it can be mounted directly on site

Ports:

- 8 insulation displacement contacts for connection of the 8-core Industrial Ethernet FC installation cables
- Interface for insertion of a replaceable insert with one or two RJ45 sockets or one RJ45 socket and one terminal for 24 V DC voltage supply (outlet insert, outlet power insert).

① As delivered

② Release insert with jack screw and pull into pre-engaged position

③ Connect cable

④ Connect cable: Press down insulation displacement contacts

⑤ Close cover

⑥ Push insert into end position. Tighten the interlocking screws of the strain-relief, push insert in, tighten jack screw

⑦ Outlet assembly complete

⑧ Outlet ready for use

⑨ Exchanging the insert: Insert can be replaced while basic housing is closed by pulling it past the pre-engaged position.

Mounting instructions

■ Function

The IE FC RJ45 Modular Outlet is connected direct to the 8-core Industrial Ethernet FC cables 4 x 2. Pre-assembled RJ45 patch cables (TP cord) are available for the connection between outlet and network component or data terminal. These conform with Cat6 of the international cabling standards.

When housing is opened, colored markings on the contact element simplify connection of the individual wires to the insulation displacement contacts.

In order to supply remote stations with power and data, the IE FC RJ45 Modular Outlet with Power Insert is connected to the IE Hybrid Cable 2x2 + 4x0.34. A maximum of 80 m can be covered between the Outlet and the IP67 hybrid connector. The connection between Outlet and data terminal can be established using a patch cable with a maximum length of 6 m.

PROFINET/Industrial Ethernet
Cabling technology

Industrial Twisted Pair – cables/connectors

Overview

Industrial Twisted Pair cable

- For constructing Industrial Twisted Pair (ITP) networks
- Double cable shield for industrial use
- Easy to lay
- Low-cost connection of data terminals
- Exceeds Category 5 of the international cabling standards ISO/IEC 11801 and EN 50173
- Available as standard type and as halogen-free version (FRNC)

Industrial Twisted Pair connector

- Connector is assembled on site with screw terminals without the need for special tools
- Data transfer is noise resistant thanks to
  - Rugged metal connector
  - System-wide grounding concept
- Fast, error-free installation using factory-tested preassembled cables

Benefits

get **Designed for Industry**

Noise-resistant data transmission through

- Double shielding with foil and braided shield
- Consistent grounding concept
- Silicone-free and therefore suitable for use in the automotive industry (for example in paint shops)
- Available as standard and as halogen-free version

Function

- With their double, particularly dense shield, the industrial twisted pair cables are especially suitable for installation in industrial environments subject to electromagnetic interference, e.g. for linking control cabinets.
- An integrated grounding concept can be implemented through the outer shield.
- The ITP cable is flame retardant and has a copolymer outer casing FRNC (Flame Retardant Non Corrosive)
- The cables considerably exceed Category 5 of the international cabling standard. They can be implemented for up to 300 MHz and are suitable for Fast Ethernet with 100 Mbit/s.

Design

Industrial twisted pair cable

Industrial Twisted Pair cable

- 2 x 2 cores
- Two cores with two dummy elements twisted into a pair.
- Each pair is enclosed by a plastic film and shielded with two aluminum-clad plastic films
- Outer woven shield around all pairs comprising tinned copper wires
- Plastic sheath (PVC)

The ITP Cable is available as a pre-assembled cable in the following versions:

- *ITP cable 9/15*
  with one 9-pin and one 15-pin connector;
  for direct connection of data terminals with an ITP interface to Industrial Ethernet network components with ITP interface

- *ITP XP Standard Cable 9/9*
  with two 9-pin connectors;
  crossed, for direct connection of two Industrial Ethernet network components with ITP interface

- *ITP XP Standard Cable 15/15*
  with two 15-pin connectors;
  crossed, for direct connection of two terminal devices with ITP interface

	Network component	Terminal device
Network component	ITP XP 9/9	ITP 9/15
Terminal device	ITP 9/15	ITP XP 15/15

Possible applications of the preassembled ITP cables

Industrial Twisted Pair connector (9-pin)

- Sub-D connectors made of metal
- Straight cable outlet
- For connection of the 2 x 2-core installation cable to the OSM or ESM
- Easy mounting with screwdriver

Industrial Twisted Pair connector (15-pin)

- Sub-D connectors made of metal
- Variable cable outlet
- For connection of the 2 x 2-core installation cable connected to a terminal device
- Internal jumper for automatic switchover from AUI to twisted pair operation in SIMATIC NET CPs with integrated twisted pair transceiver
- Easy mounting with screwdriver

■ More information

Installation instructions

The installation cable is either supplied by the meter or with preassembled connectors. It can be used to connect a single data terminal or two active network components (OSM/ESM).

On the network component side, 9-pole metal Sub-D connectors are used, and on the device side, 15-pole connectors are used. The 15-pole connectors contain a special plug-in jumper which can be used by modules with integrated twisted pair transceiver to switch from AUI to twisted pair operation.

Preassembled cables are used to connect data terminals directly to an active network component or for cascading active network components.

The ITP cables can also be ordered by the meter for on site assembly. 9-pole and 15-pole ITP connectors for assembly without special tools are available for this purpose.

The maximum cable length of a laid ITP Standard Cable is 100 m if connected directly.

ITP cables are intended only for use inside buildings.

Notes:

You can order components supplementary to the SIMATIC NET cabling range from your local contact.

Additional installation instructions can be found in the manual for TP and fiber-optic networks.

Overview of FC-FOCs

Overview

- Simple on-site assembly of glass FOC in the field
- Optical signal transmission
- No radiation emission from the cable
- Unaffected by external noise fields
- No grounding problems
- Electrical isolation
- Low weight
- Simple laying of cables

Design

Fiber-optic cables with glass core (62.5/200/230) are offered for the FastConnect fiber-optic cable system:

- FC glass fiber-optic cable;
  duplex cable for indoor and outdoor fiber-optic networks

The fiber structure corresponds to that of the PCF. This allows simple assembly on site.

Sheath material	Application
PVC	Standard use in indoor and outdoor areas of industrial applications
PUR	Highly mobile applications (tow chains) for high mechanical or chemical stress in harsh industrial environments
PE	Routing of cables in moist areas indoors and outdoors, and for direct burying in earth
FRNC	Standard applications with high fire protection requirements

Approvals

UL listing (safety standard) for network lines is especially necessary for the American and Canadian markets. The requirements for the appropriate approvals depend on where the cable is routed within the building. This applies to all cables which have to be routed from a machine to a remote control cabinet and are positioned on cable racks secured in the building. These cables are identified by the suffix "GP" (general purpose) in the product name and have the corresponding UL approvals.

2

Application

The fiber-optic cable (FOC) is used for the transmission of signals in very extensive plants and where there are significant potential differences within a plant. The light beam is guided by total reflection at the transition from core to cladding which has a lower refractive index than the core.

The FastConnect fiber-optic (FC FO) system enables fast on-site assembly of glass fiber-optic cables with the right lengths to suit the respective application.

Assembly with FastConnect for glass fiber-optic cables

Steps for assembly of Industrial Ethernet fiber-optic cables with Industrial Ethernet FastConnect

PROFINET/Industrial Ethernet
Cabling technology

FC glass fiber-optic cables

Overview

- FastConnect standard fiber-optic cable for use in optical Industrial Ethernet and PROFIBUS networks
- For all users who want to install and assemble the glass fiber-optic cables themselves over longer distances on site for office or industrial applications.
- Simple FastConnect SC/BFOC connector assembly on site
- Rugged construction for industrial applications both indoors and outdoors
- High interference immunity, as they are not sensitive to electromagnetic interference
- Extensive range of approvals (UL approvals)

Benefits

get — Designed for Industry

- Avoidance of excessive cable lengths in the control cabinet, as the fiber-optic cables can be assembled to the right length on site
- Easy installation of cables in buildings, as cables can be pulled in without connectors attached
- Simple extension of installed glass fiber-optic cables via SC and BFOC couplers
- Devices with different connection method (SC or BFOC) can easily be connected to one another using self-assembled adapter cables
- Electrical isolation of Industrial Ethernet/PROFINET/ PROFIBUS devices
- Unaffected by electromagnetic interference
- Tap-proof: no radiation from cable

Application

SIMATIC NET FastConnect glass fiber-optic cables are used to construct optical indoor and outdoor Industrial Ethernet/ PROFINET and PROFIBUS networks. Devices with integral optical interface (SC or BFOC connection technology) are, for example, optical link modules (OLM) and SCALANCE X Industrial Ethernet switches.

FastConnect glass fiber-optic cables are to be assembled on site using FastConnect SC or FastConnect BFOC connectors. A corresponding assembly kit (FC FO Termination Kit) is available for this purpose. The Termination Kit permits the stripping and the "cleaving" of the fiber in the assembled connector, as is familiar from PCF fiber-optic cables. To extend existing lines, a BFOC or SC coupler may be used depending on the connection technology.

Design

FC FO Standard Cable GP (General Purpose);
rugged round cable with green outer sheath, Kevlar strain relief elements, and 62.5/200/230 FC FO fibers for indoor/outdoor applications

FC FO Trailing Cable;
rugged round cable with green outer sheath, Kevlar strain relief elements and 62.5/200/230 FC FO fibers for use in tow chains and moving applications

Maximum cable length between two devices:

- 3000 m for 100 Mbit/s Ethernet or for PROFIBUS
- 350 m for 1000 Mbit/s Ethernet (1000Base-SX)
- 550 m for 1000 Mbit/s Ethernet (1000Base-LX)

The maximum cable lengths can be assembled from partial lengths using FastConnect couplings (SC or BFOC; maximum two couplings, approx. 2.5 dB attenuation per coupling). It is also possible to combine existing installed, conventional 62.5/125 µm multimode glass fiber-optic cable sections with the FastConnect fiber-optic cables.

E-mail: juergen.hertlein@siemens.com

Overview

- Compact, rugged assembly case for FastConnect glass fiber-optic cables
- Simple fitting of SC and BFOC connectors to FastConnect glass fiber-optic cables
- The quality of the assembly can be checked using the enclosed microscope

Benefits

get — **Designed for Industry**

- Simple installation of the unassembled cable
- Flexible connector assembly possible on site (SC/BFOC connectors)
- Prevention of faults by simply checking the assembled connectors using a microscope
- Simple repair of FC glass fiber-optic cables in the field

Application

SIMATIC NET FC glass fiber-optic cables are used to construct optical indoor and outdoor Industrial Ethernet/PROFINET and PROFIBUS networks. They are easy to assemble on-site using the termination kit with SC or BFOC connectors. The maximum cable length between two Industrial Ethernet/PROFINET or PROFIBUS devices is 3000 m in the case of 100 Mbit/s Ethernet or PROFIBUS.

Design

Cable construction FC glass optical fiber

The kit is available in an assembly case for on-site installation of FC SC and FC BFOC connectors on FC glass fiber-optic cables.

It consists of a stripping tool, buffer stripping tool, Kevlar scissors, fiber breaking tool and microscope.

FC FO Termination Kit	**6GK1 900-1GL00-0AA0**
Assembly case for on-site installation of FC SC and FC BFOC connectors on FC glass fiber-optic standard cables; consists of stripping tool, Kevlar scissors, fiber breaking tool and microscope	

More information

You can order components supplementary to the SIMATIC NET cabling range from your local contact.

Technical advice on this subject is available from:

J. Hertlein
I IA SC IC PRM 4
Phone: +49 (0)911/750 44 65
E-mail: juergen.hertlein@siemens.com

Overview

- Optical signal transmission
- No radiation along the cable
- Unaffected by external noise fields
- No grounding problems
- Electrical isolation
- Low weight
- Easy routing

Application

The fiber optic (FO) cable is used for transmitting signals with the help of waves in the optical frequency range. The light beam is guided by total reflection at the transition from core to cladding which has a lower refractive index than the core.

The fiber optic cable is provided with a protective coating. The term "fiber" is often also used for fiber-optic cables (FOC).

Design

Fiber-optic cables with glass fibers , PCF fibers(**P**olymer **C**ladded **F**iber) and POF fibers(**P**olymer **O**ptical **F**iber) are offered for Industrial Ethernet:

- Glass fiber-optic cable;
  duplex cable for fiber-optic networks indoors and outdoors
- POF fiber-optic cable;
  Duplex cable for POF networks in the indoor area
- PCF fiber-optic cable;
  duplex cable for PCF networks indoors and outdoors

Sheath material	Application
PVC	Standard use in indoor and outdoor areas of industrial applications
PUR	Highly mobile applications (tow chains) for high mechanical or chemical stress in harsh industrial environments
PE	Routing of cables in moist areas indoors and outdoors, and for direct burying in earth
FRNC	Standard applications with high fire protection requirements

Approvals

UL listing (safety standard) for network lines is especially necessary for the American and Canadian markets. The requirements for the appropriate approvals depend on where the cable is routed within the building. This applies to all cables which have to be routed from a machine to a remote control cabinet and are positioned on cable racks secured in the building. These cables are identified by the suffix "GP" (general purpose) in the product name and have the corresponding UL approvals.

■ Overview

- Used for the optical Industrial Ethernet and PROFIBUS networks
- Rugged design for industrial applications indoors and outdoors
- Halogen-free design for installation inside buildings
- Trailing cable for the special application of forced motion control
- High immunity to noise thanks to insensitivity to electro-magnetic fields
- Available preassembled
- Extensive approvals (UL)

■ Benefits

get Designed for Industry

- Easy routing with
  - Pre-assembled cables
  - No grounding problems
  - Very light fiber-optic cable
- Tap-proof
  due to lack of radiation from the cable
- Silicon-free;
  therefore suitable for use in the automotive industry
  (e.g. on paint shop conveyors)

■ Application

Marine duplex FOC SIENOPYR

Halogen-free, non-crush, flame-retardant, marine-approved fiber-optic cable for permanent installation on ships and offshore platforms indoors and on open deck. Sold by the meter

Fiber-optic indoor cable

Halogen-free fiber-optic cable, non-crush, flame-retardant, for installation inside buildings (e.g. in production halls and in building automation). Supplied in fixed lengths, pre-assembled with four BFOC connectors.

Standard FOC/FRNC cable

Fiber-optic cables for the following application areas indoors and outdoors

- For routing above ground
- For installation inside buildings.

Sold by the meter and in fixed lengths, pre-assembled with four BFOC connectors or four SC connectors.

Fiber-optic trailing cable

Fiber-optic cables for the special application of forced motion control, such as in continuously moving machine parts (in trailing cables) indoors and outdoors. Two cable versions are available for this application:

- FO Trailing Cable;
  Cable for high mechanical stress, PUR outer sheath, no UL approval
- FO Trailing Cable GP (general purpose);
  Cable for low mechanical stress, PVC outer sheath, with UL approval

Sold by the meter and in fixed lengths, pre-assembled with four BFOC connectors or four SC connectors.

Fiber-optic outdoor cable

Waterproof cable (lengthwise and sideways) for use outdoors with non-metallic protection against rodents for laying into the ground.

Sold by the meter and in fixed lengths, pre-assembled with four BFOC connectors or four SC connectors.

Note:

Special tools and specially trained personnel are required for pre-assembling glass fiber-optic cables

PROFINET/Industrial Ethernet
Cabling technology

Glass fiber-optic cables

■ Application (continued)

Application examples

Use of pre-assembled fiber-optic cables with SC connectors (1000 Mbit/s)

Use of pre-assembled fiber-optic cables with BFOC connectors (100 Mbit/s)

■ Design

The following types of cable are available:

- 100Base FX;
  62.5/125 µm fiber, 4000 m
- 100Base FX;
  50/125 µm fiber, 5000 m
- 100Base FX;
  9/125 µm fiber, 26000 m
- 1000Base SX;
  50/125 µm fiber, 750 m
- 1000Base LX;
  50/125 µm fiber, 2000 m
- 1000Base LX;
  9/125 µm fiber, 10000 m;
  the distances that can be spanned by cables depend on the device-specific wavelength.

In the respective applications, the maximum cable lengths must be taken into account. Passive connection of different fiber types is not permissible. The use of 50 µm fiber is recommended for future installations due to the greater range of gigabit Ethernet. Use of the 62.5 µm fiber is only recommended for existing network installations. In order to span very long distances, the use of singlemode cables with a 9 µm fiber is recommended.

Order No.	6XV1 873-2A	6XV1 873-2B	6XV1 873-2G
Product type designation	**FO Standard Cable GP**	**FO FRNC Cable GP**	**FO Ground Cable**
Product description	Glass fiber-optic cable, sold by the meter, in bulk	Glass fiber-optic cable, sold by the meter, in bulk	Glass fiber-optic cable, sold by the meter, in bulk
Suitability for application	Cable for indoor and outdoor use, UL approval	Halogen-free cable for indoor and outdoor use, for fixed installation, UL approval	Cable with longitudinal and lateral water tightness with non-metallic protection against rodents for outdoor use and for direct laying in soil
Design of preassembled FO cable	Can be fitted with four BFOC or SC connectors	Can be fitted with four BFOC or SC connectors	Can be fitted with four BFOC or SC connectors
Cable designation	AT-W(ZN)YY 2x1 G 50/125	AT-W(ZN)HH 2G 50/125 UV	AT-WQ(ZN)Y(ZN)B2Y 2G 50/125
Cable length	-	-	-
Optical data			
Attenuation factor per length			
• Max. at 850 nm	2.7 dB/km	2.7 dB/km	2.7 dB/km
• Max. at 1300 nm	0.7 dB/km	0.7 dB/km	0.7 dB/km
Bandwidth length product			
• At 850 nm	600 GHz·m	600 GHz·m	600 GHz·m
• At 1300 nm	1 200 GHz·m	1 200 GHz·m	1 200 GHz·m
Mechanical data			
Number of fibers per FO core	1	1	1
Number of FO cores per FO cable	2	2	2
Design of FO fiber	Multimode graded-index fiber 50/125 µm, OM 2	Multimode graded-index fiber 50/125 µm, OM 2	Multimode graded-index fiber 50/125 µm, OM 2
Design of FO core	Hollow core, filled, diameter 1400 µm	Hollow core, filled, diameter 1400 µm	Hollow core, filled, diameter 1400 µm
Design of FO cable	Splittable	Splittable	Splittable
Outer diameter			
• of optical fiber	50 µm	50 µm	50 µm
• of optical fiber sheath	125 µm	125 µm	125 µm
• of FO core sheath	2.9 mm	2.9 mm	2.9 mm
• of cable	-	9.2 mm	10.5 mm
Symmetrical deviation			
• of outer diameter of FO core sheath	0.1 mm	0.1 mm	0.1 mm
• of outer diameter of cable	-	0.3 mm	0.5 mm
Material			
• of optical fiber core	Quartz glass	Quartz glass	Quartz glass
• of optical fiber sheath	Quartz glass	Quartz glass	Quartz glass
• of FO core sheath	PVC	FRNC	PVC
• of FO cable sheath	PVC	FRNC	PE
• of the strain relief	Aramide fibers	Aramide fibers	Aramide fibers
Color			
• of FO core sheath	Orange/black	Orange/black	Orange/black
• of the cable sheath	Green	Green	Black
Bending radius			
• Minimum permitted single bending radius	45 mm	90 mm	105 mm
• Minimum permitted repeated bending radius	65 mm	135 mm	155 mm
Number of bending cycles			
Maximum tensile load	500 N	500 N	800 N
Short-term lateral force per length	600 N/cm	500 N/cm	500 N/cm
Continuous lateral force per length	400 N/cm	-	300 N/cm
Weight per length	40 kg/km	85 kg/km	90 kg/km

Glass fiber-optic cables

■ **Technical specifications** (continued)

Order No.	6XV1 873-2A	6XV1 873-2B	6XV1 873-2G
Product type designation	**FO Standard Cable GP**	**FO FRNC Cable GP**	**FO Ground Cable**
Permitted ambient conditions			
Ambient temperature			
• During operation	-25 … +80 °C	-40 … +70 °C	-40 … +75 °C
• During storage	-25 … +80 °C	-40 … +70 °C	-40 … +75 °C
• During transport	-25 … +80 °C	-40 … +70 °C	-40 … +75 °C
• During mounting	-5 … +50 °C	-5 … +50 °C	-5 … +50 °C
Behavior in fire	Flame-retardant in accordance with IEC 60332-1-2 and IEC 60332-3-22 (Cat. A)	Flame-retardant in accordance with IEC 60332-1-2 and IEC 60332-3-22 (Cat. A)	Flammable
Chemical resistance			
• against mineral oil	Limited resistance	Limited resistance	Resistant
• against grease	Limited resistance	Limited resistance	Resistant
• against water	Limited resistance	Limited resistance	Resistant
Radiological resistance to UV radiation	Resistant	Resistant	Resistant
Product properties, functions, components General			
Product property			
• Halogen-free	No	Yes	No
• Silicon-free	Yes	Yes	Yes
Product component: protection against rodents	No	No	Yes
Cable length with glass FOC			
• Maximum with 100BaseFX and Industrial Ethernet	5 000 m	5 000 m	5 000 m
• Maximum with 1000BaseSX and Industrial Ethernet	750 m	750 m	750 m
• Maximum with 1000BaseLX and Industrial Ethernet	2 000 m	2 000 m	2 000 m
• Maximum with PROFIBUS	3 000 m	3 000 m	3 000 m
Standards, specifications, approvals			
Certificate of suitability	UL approval: OFN (NEC Article 770, UL 1651) / CSA approval: OFN 90 Cel, FT1, FT4 (CSA Standard C22.2 No232-M1988)	UL approval: OFN (NEC Article 770, UL 1651) / CSA approval: OFN (CSA standard C22.2 No232-M1988)	-

■ Technical specifications (continued)

Order No.	6GK1 901-0DA20-0AA0
Product type designation	**BFOC connector set**
Product description	BFOC connector set
Suitability for application	for the connection of glass fiber-optic cables
Transmission rate	
Transmission rate	
• 1 with Industrial Ethernet	10 Mbit/s
• 2 with Industrial Ethernet	100 Mbit/s
• 3 with Industrial Ethernet	1 000 Mbit/s
• with PROFIBUS	9.6 kbit/s … 12 Mbit/s
Interfaces	
Number of optical connections for fiber-optic cables	1
Number of optical connections for network components or terminals	BFOC connector
Design of electrical connection FastConnect	No
Mechanical data	
Enclosure material	Metal and plastic
Design, dimensions and weights	
Type of cable outlet	180 degree cable outlet
Width	10 mm
Height	10 mm
Depth	10 mm
Net weight	8 g
Permitted ambient conditions	
IP degree of protection	IP20
Product properties, functions, components General	
Product property silicon-free	Yes
Product component strain relief	Yes
Standards, specifications, approvals	
Certificate of suitability: RoHS conformity	Yes

■ Ordering data

	Order No.
FO standard cable GP 50/125/1400 [2]	
Multimode cable, <u>sold by the meter;</u> max. length 1000 m; minimum order 20 m;	**6XV1 873-2A**
<u>Preferred lengths</u> [1] pre-assembled with 4 BFOC connectors	
• 0.5 m	**6XV1 873-3AH05**
• 1 m	**6XV1 873-3AH10**
• 2 m	**6XV1 873-3AH20**

PROFINET/Industrial Ethernet
Cabling technology

POF and PCF fiber-optic cables

2

Overview

- Electrical isolation of PROFINET/Ethernet devices
- Protection of the transmission path against electromagnetic interference
- Up to 50 m cable length with plastic fiber optic cables and up to 100 m with PCF fiber optic cables
- Rugged fiber-optic standard cables, designed for industrial applications
- Extensive approvals (UL)

Benefits

get **Designed for Industry**

- Plastic and PCF fiber optic cables can be pre-assembled on site
- Easy connector assembly on site
- Time savings on start-up thanks to pre-assembled cables
- Protection of the transmission path against electromagnetic interference
- Tap-proof, because the cable does not radiate

Application

SIMATIC NET POF and PCF fiber optic conductors are used to construct optical indoor PROFINET and Industrial Ethernet networks. Devices with integral optical interface (SC RJ connection system) are, for example, SCALANCE X200-4P IRT, SCALANCE X201-3P IRT, SCALANCE X202-2P IRT, SCALANCE X101-1POF and ET 200S.

POF and PCF fiber optic cables can be assembled easily on site with SC RJ plugs. The maximum cable length between two devices is 50 m for POF and 100 m for PCF fiber-optic cables. PCF cables are also available preassembled with 2 SC RJ plugs.
Design

Different types of POF and PCF fiber optic cables are offered:

POF fiber optic cables

Rugged round cables with green outer sheath and Kevlar strain relief elements as well as two plastic fibers with rugged Polyamid inner sheath for applications indoors/outdoors with cable lengths **up to 50 m**. The cables are suitable for assembly in the field.

- POF Standard Cable GP (General Purpose); for applications indoor/outdoors
- POF Trailing Cable; for trailing cable applications

PCF fiber optic cables

Rugged round cables with green outer sheath and Kevlar strain relief elements for applications indoor/outdoors with cable lengths **up to 100 m**. The cables are suitable for assembly in the field.

- PCF Standard Cable GP (General Purpose); for applications indoor/outdoors with cable lengths up to 100 m.
- PCF fiber-optic trailing cable; for trailing cable applications with cable lengths of up to 100 m. The cable is suitable for assembly in the field. The following cable versions are available:
  - PCF Trailing Cable; cable for high mechanical stress, PUR outer sheath, no UL approval
  - PCF Trailing Cable GP (general purpose); cable for low mechanical stress, PVC outer sheath, with UL approval

PROFINET/Industrial Ethernet
Cabling technology

POF/PCF FOC Termination Kit

■ Overview

- Compact, rugged assembly case for POF and PCF fiber-optic cables
- Special versions for easy assembly of SC RJ plugs on POF and PCF fiber-optic cables
- The quality of the assembly can be checked using the enclosed microscope
■ Benefits

get — Designed for Industry

- Easy installation of the unassembled cables in industrial plants
- Flexible assembly of connectors on POF and PCF fiber optic cables on site (SC RJ connectors)
- Mistakes are prevented with easy visual inspection of the assembled connector on site using a microscope
- Simple repair of POF and PCF fiber optic cables in the field

■ Application

SIMATIC NET POF and PCF fiber-optic cables are used to construct optical indoor and outdoor Industrial Ethernet/PROFINET networks. They are easy to assemble on-site with the Termination Kits and 2 x 2 RJ connectors. The maximum cable length between two Industrial Ethernet/PROFINET devices is 100 m for PCF and 50 m for POF fiber-optic cables.

Industrial Ethernet/PROFINET devices with integral optical interface (SC RJ connection system) are, for example, SCALANCE X-200P IRT and ET 200S.

■ Design

Cable construction POF plastic optical fiber

Cable construction PCF plastic optical fiber

The kit is available in assembly cases for on-site installation of SC RJ connectors on PCF fiber-optic cables.

It consists of a stripping tool, buffer stripping tool, Kevlar scissors, fiber breaking tool and microscope.

Overview

2

■ Overview

Industrial Ethernet switching components comprise
- Compact switch modules (CSM)
- SCALANCE X Industrial Ethernet switches
- Communications processors (CP) with integral switch

Compact switch modules (CSM)

Unmanaged switches for use directly on the SIMATIC for interface expansion and integration of machines into existing plant networks

SCALANCE X-000/XB-000 unmanaged

Unmanaged switches with electrical and/or optical ports for designing small networks for machine or plant islands with 10/100/1000 Mbit/s

SCALANCE X-100 unmanaged

Switches with electrical and/or optical ports, redundant power supply, and signaling contact for use in machine-level applications (also available as media converter with two ports for conversion between two different media).

SCALANCE X-200 managed

For universal use, from machine-level applications to networked subsystems. Configuration and remote diagnosis are integrated into the STEP 7 engineering tool. This increases the plant availability. Devices with a high degree of protection permit cabinetless installation.

Corresponding switches (SCALANCE X-200IRT) are also available for use in subsystem networks with hard real-time requirements and maximum availability.

SCALANCE XF-200 managed

The functions of the SCALANCE XF-200 Industrial Ethernet switches correspond to those of the SCALANCE X-200 switches. The flat design in ET 200S format (IP20 protection) mean they are optimally suitable for space-saving use in small control boxes.

SCALANCE X-300 managed

Networking of subsystem/plant areas, as well as linking to the enterprise network. The SCALANCE X-300 managed product line combines the firmware functionality of the SCALANCE X-400 line with the compact design of the SCALANCE X-200 line. This means the SCALANCE X-300 switches have extended management functions and an extended firmware functionality compared to the SCALANCE X-200 switches.

Electrical and optical Gigabit Ethernet ports are available in addition.

SCALANCE XR-300 managed

The functions of the SCALANCE XR-300 Industrial Ethernet switches correspond to those of the SCALANCE X-300 switches. Designed as rack switches, they are particularly suitable for use in 19" control cabinets. They are also fully modular, and can be adapted to the respective task using 2-port media modules (electrical and optical).

EEC versions (Enhanced Environmental Conditions) in compact and rack design can be used in power engineering systems and under difficult environmental conditions.

SCALANCE X-400 managed (layer 3)

For use in high-performance plant networks (e.g. with high-speed redundancy). Thanks to the modular design, the switches can be adapted to the respective task . Due to the support of IT standards (e.g. VLAN, IGMP, RSTP), the seamless integration of automation networks into existing office networks is possible.

Routing functions on layer 3 permit communication between different IP subnetworks.

SCALANCE X-500 managed (layer 3)

For networking and structuring high-performance industrial networks and for connecting office networks to automation networks. As a Layer 3 switch, SCALANCE X-500 is extremely well suited to use as a central component in backbone networks, e.g. when a high number of ports is required, at extremely high transmission rates (10 Gigabit Ethernet), or for redundant connection to an office infrastructure. The rack switch (19" design) can be used flexibly to suit requirements thanks to its modular design and the plug-in 4-port media modules (electrical and optical).

Routing functions on layer 3 permit communication between different IP subnetworks.

Communications processors for SIMATIC with integral switch

Managed switches for expanding SIMATIC by Industrial Ethernet/PROFINET interfaces, and for integrating the PLCs into existing line or ring topologies.

Use as a router between IP subnets is also possible with the advanced CPs as a result of the integral layer 3 functionality.

### *Communications processors for PC with integral switch*

Managed switches for expanding industrial PCs by Industrial Ethernet/PROFINET interfaces, and for integrating the PCs into existing line topologies.

Compact switch modules
CSM 1277 unmanaged

2

Overview

- Unmanaged switch for connecting a SIMATIC S7-1200 to an Industrial Ethernet network with a line, tree or star topology
- Multiplication of Ethernet interfaces on a SIMATIC S7-1200 for additional connection of up to three programming devices, operator controls, and further Ethernet nodes
- Simple, space-saving mounting on the SIMATIC S7-1200 mounting rail
- Low-cost solution for implementing small, local Ethernet networks
- Connection without any problems using RJ45 standard connectors
- Simple and fast status display via LEDs on the device
- Integral autocrossover function permits use of uncrossed connecting cables

Benefits

g e t **get** Designed for Industry

- Reduction in assembly costs and mounting space compared to use of external network components
- Fast commissioning, as no configuration is necessary
- Flexible expansion of the network by simply inserting the CSM

Application

The CSM 1277 is an Industrial Ethernet switch of compact design for use in the SIMATIC S7-1200. The CSM 1277 can be used to multiply the Ethernet interface of the SIMATIC S7-1200 for simultaneous communication with operator panels, programming devices, other controllers, or the office world.

The CSM 1277 and the SIMATIC S7-1200 controller can be used to implement simple automation networks at low cost.

Design

The CSM 1277 compact switch module offers all advantages of the SIMATIC S7-1200 design:

- Compact design;
  the rugged plastic enclosure contains:
  - 4 x RJ45 ports for connecting to Industrial Ethernet
  - 3-pole plug-in terminal strip for connection of the external 24 V DC supply on the top
  - LEDs for diagnostics and for status display of the Industrial Ethernet ports
- Simple mounting on the mounting rail of the S7-1200
- Fanless and consequently low-maintenance design
- The module can be replaced without using a programming device

Function

- Multiplication of Ethernet interfaces of the SIMATIC S7-1200
- Design of a small, local Industrial Ethernet network with three further nodes
- Automatic detection of data transfer rate by means of autosensing and autocrossover functions
- LEDs for diagnostics and for status display

Network topology and network configuration

Various network topologies can be implemented using the CSM 1277 compact switch module:

- Connection of SIMATIC S7-1200 in linear topology:
  at least one RJ45 connection of the SIMATIC S7-1200 remains vacant, e.g. for connecting a programming device (PG)
- Connection of SIMATIC S7-1200 to a higher-level network in a tree/star topology:
  at least two RJ45 connections of the SIMATIC S7-1200 remain vacant, e.g. for connecting a programming device/operator panel (PG/OP)
- Design of a small, local network with a SIMATIC S7-1200 and three further Ethernet nodes

Configuration

The CSM 1277 compact switch module is an unmanaged switch and need not be configured.

Diagnostics

The following information is displayed on LEDs on the device:
- Power
- Port status
- Data traffic

Compact switch modules
CSM 377 unmanaged

2

Overview

- Unmanaged switch for the connection of a SIMATIC S7-300 with integral PROFINET interface or with an Industrial Ethernet CP or ET 200M to an Industrial Ethernet in an electrical linear, tree or star structure
- As many as three additional nodes can be connected
- As an unmanaged switch, the CSM 377 is used for integrating small machines into existing automation networks or for the standalone operation of the machines
- Simple, space-saving attachment to S7-300 mounting rail due to design as single-width module in S7-300 format
- Low-cost solution for implementing small, local Ethernet networks
- Rugged, industry-standard node connections with PROFINET-compliant RJ45 connectors that latch onto the enclosure to offer additional strain and bending relief

Benefits

get Designed for Industry

- Quick and easy connection of a SIMATIC S7-300 or ET 200M to electrical Industrial Ethernets in linear, tree or star structures by means of three additional RJ45 ports
- Ideal solution for the implementation of small local Ethernets with a SIMATIC S7-300 station
- Secure data communication by means of industry standard device connection with PROFINET-compliant connector IE FC RJ45 Plug 180 and latching of the connector to the enclosure to provide additional strain relief
- Low-maintenance operation thanks to fanless construction
- Quick and easy diagnosis by means of LEDs on the device
- Use of uncrossed connection cables possible by means of integrated autocrossover function

Application

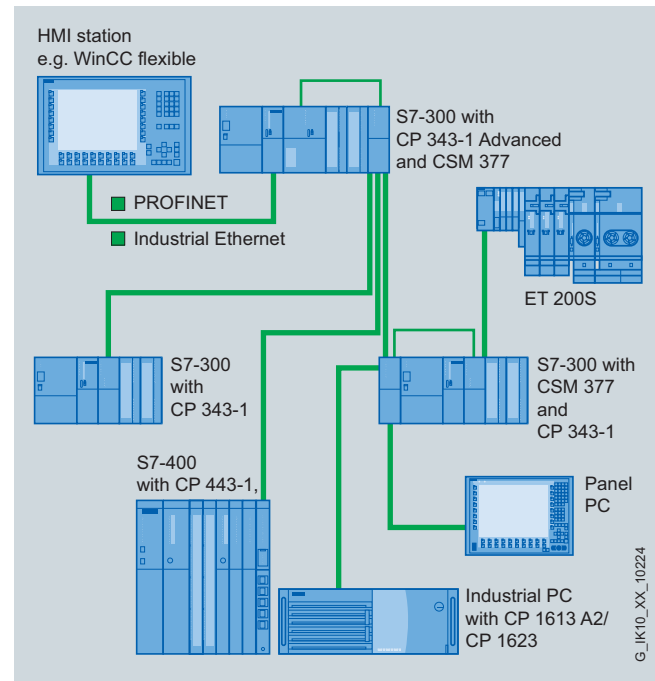
- For the economical construction of small, electrical Industrial Ethernets with star, tree and linear structures using a SIMATIC S7-300 or ET 200M

Design

The compact switch module CSM 377 features all the advantages of the SIMATIC S7-300 design:

- Compact construction;
  the rugged plastic enclosure features the following on the front panel:
  - 4 x RJ45 ports for the connection to Industrial Ethernet (retaining collar)
  - 1 x 2-pin pluggable terminal strip for the connection of the external 24 VDC power supply
  - LEDs for diagnostics and for status display of the Industrial Ethernet ports
- 10/100BaseTX;
  automatic detection of the data rate with autosensing and autocrossover function for the connection of IE FC cables by means of IE FC RJ45 Plug 180 up to 100 m
- Simple mounting;
  the CSM 377 switch module is mounted on the mounting rail of the S7-300. As it has no connection to the backplane bus of the S7-300 or ET 200M, it must either be inserted at the beginning (first module to the left of the CPU) or at the end (last module on far right) of the S7-300 station. The connection to the CPU of the S7-300 is either by means of an Industrial Ethernet cable or an Industrial Ethernet twisted pair cord.
- Three further Industrial Ethernet interfaces (TP ports) are available for the connection of additional Ethernet nodes such as HMI panels or ET 200
- The CSM 377 can be operated without a fan and no backup battery is necessary
- The module can be replaced without a programming device
■ Function

- Connection of a SIMATIC S7-300 to a higher-level electrical network in a linear, tree or point-to-point structure
- Construction of a small local network with one SIMATIC S7-300 and three other Ethernet nodes

Thanks to the switching technology used, the CSM 377 is suitable for use in PROFINET networks, but offers no additional PROFINET functions, i.e. no integration into the PROFINET diagnostics.


Network topology and network configuration

When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two nodes:
  - max. 100 m with Industrial Ethernet FastConnect cable and IE FC RJ45 Plug 180;
    of which no more than 10 m by means of patching with TP cord

Connection of SIMATIC S7-300 with CSM 377 to Industrial Ethernet with linear structure

Construction of a local Industrial Ethernet with SIMATIC S7-300 and CSM 377 in a point-to-point structure

Configuration

The Compact Switch Module CSM 377 is an unmanaged switch and requires no configuration.

Diagnostics

The following information is indicated on the device by means of LEDs:

- Power
- Port status
- Data traffic

PROFINET/Industrial Ethernet

Function overview SCALANCE X-000 unmanaged

Overview

The unmanaged Industrial Ethernet Switch SCALANCE X005 is optimized for low-cost installation of small Industrial Ethernet networks with data transfer rates of 10/100 Mbit/s in a line and star topology.

- Five electrical nodes or network connections
- Rugged metal enclosure for space-saving cubicle mounting on standard rails, S7-300 DIN rail or for wall mounting
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Diagnostics on the device by means of LEDs (power, link status, data communication)

Benefits

get   Designed for Industry

- Ideal solution for configuring small Industrial Ethernet line and star topologies
- Space-saving installation in the cabinet thanks to the compact design in S7-300 format
- Reliable plug-in connection thanks to rugged, industry-standard device connection in conjunction with PROFINET-compliant FastConnect connectors
- Installation is possible without a patch field by means of IE FC RJ45 Plug 180 and IE FC Standard Cable
- Use of uncrossed connection cables possible by means of integrated autocrossover function

Application

- For low-cost configuration of small, electrical Industrial Ethernet star and line topologies with switching functionality, e.g. machine or plant islands
- For use in the control cabinet
- The SCALANCE X005TS (**T**ransportation **S**ystems) is suitable for use in rail and road transport due to its specification according to EN 50155 and e1/E1

Product versions

- *SCALANCE X005*
  for setting up electrical star and linear topologies with five electrical ports
- *SCALANCE X005TS*
  for setting up electrical star and linear topologies with five electrical ports for use in rail and road transport with extended temperature range

Design

The SCALANCE Industrial Ethernet switches with a rugged metal housing (IP30) are optimized for mounting on a standard rail and an S7-300 DIN rail. Direct wall mounting in different positions is also possible. Due to the housing dimensions that correspond to those of the SIMATIC S7-300, the devices are very well suited for integration into an automation solution using S7-300 components.

The SCALANCE X005 switch is equipped with:

- Supply voltage 1 x 24 V DC
- A row of LEDs for displaying status information (power, link status, data communication)
- 5 x 10/100BaseTX, RJ45 ports:
  automatic detection of the data rate (10 or 100 Mbit/s), with autosensing and autocrossover function for connecting IE FC cables via IE FC RJ45 Plug 180 over distances up to 100 m

SCALANCE X005 unmanaged

Function

- Uncrossed connecting cables can be used due to Autocrossover function integrated in the ports
- Network load disconnection through integral switch functionality

Network topology and network configuration

The SCALANCE X005 is typically accommodated in one control cubicle together with the nodes to be connected. It can be operated in small electrical star and line topologies. Network configuration and expansion are easy to implement; there are no limitations with the cascading of SCALANCE X005.
When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE X switches:
 - Max. 100 m with Industrial Ethernet FastConnect products

Diagnostics

The following information is displayed on site by LEDs:

- Port status
- Data traffic

Star-shaped network topology with SCALANCE X005

Electrical line topology with SCALANCE X005

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SCALANCE XB-000 unmanaged

2

Overview

The unmanaged Industrial Ethernet switches of the SCALANCE XB-000 line are optimized for installing Industrial Ethernet networks in a line and star topology.

- Electrical or optical station or network connection
- *SCALANCE XB-000*;
  for Fast Ethernet (10/100 Mbit/s)
- *SCALANCE XB-000G*;
  for Gigabit Ethernet (10/100/1000 Mbit/s
- *SCALANCE XB-000LD* (**L**ong **D**istance);
  for connecting especially remote nodes
- Enclosure for space-saving installation in control cabinets or boxes on a standard mounting rail

Benefits

g e t **get** **Designed for Industry**

- Implementation of simple and very economical machine networking
- Space-saving installation thanks to small, compact design
- Can be used in industrial environments
- Quick commissioning without configuration
- Easy on-site diagnostics via LEDs
- Uncomplicated use of uncrossed connecting cables possible thanks to the integrated Autocrossover function
- Low-cost connection of especially remote nodes possible

Application

The unmanaged Industrial Ethernet switches of the SCALANCE XB-000 line allow cost-effective solutions for setting up small, electrical/optical star or line topologies with switching functionality in machines or plant units.

The enclosure is designed for space-saving installation in a control cabinet on a standard rail.

Product versions

SCALANCE XB005 and SCALANCE XB008

- 5 or 8 x 10/100 Mbit/s electrical RJ45 ports

SCALANCE XB005G and SCALANCE XB008G

- 5 or 8 x 10/100/1000 Mbit/s electrical RJ45 ports

SCALANCE XB004-1

- 4 x 10/100 Mbit/s electrical RJ45 ports
- 1 x 100 Mbit/s optical SC port (multimode, glass), up to 5 km

SCALANCE XB004-1LD

- 4 x 10/100 Mbit/s electrical RJ45 ports
- 1 x 100 Mbit/s optical SC port (singlemode, glass), up to 26 km

SCALANCE XB004-1G

- 4 x 10/100/1000 Mbit/s electrical RJ45 ports
- 1 x 1000 Mbit/s optical SC port (multimode, glass), up to 750 m

SCALANCE XB004-1LDG

- 4 x 10/100/1000 Mbit/s electrical RJ45 ports
- 1 x 1000 Mbit/s optical SC port (singlemode, glass), up to 10 km

Design

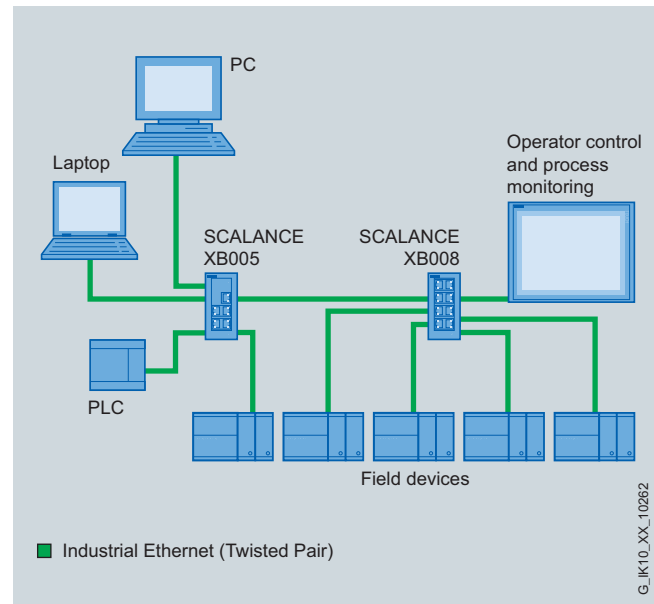
The SCALANCE XB-000 Industrial Ethernet switches are optimized for installation on a standard rail. Wall mounting is possible.

The SCALANCE XB-000 switches have:

- A 3-pole terminal block for connecting the power supply (1 x 24 V DC) and functional ground
- An LED for indicating the status information (power)
- LEDs for indicating the status information (link status and data exchange) per port

The following port types are available:

- 10/100 BaseTX electrical RJ45 ports or 10/100/1000 BaseTX electrical RJ45 ports:
  automatic data transmission rate detection (10 or 100 Mbit/s), with Autosensing and Autocrossing function for connecting IE TP cables up to 100 m.
- 100 BaseFX, optical SC port
  for direct connection to Industrial Ethernet FO cables.
  Multimode fiber-optic cable up to 5 km
- 100 BaseFX, optical SC port
  for direct connection to Industrial Ethernet FO cables.
  Single mode fiber-optic cable up to 26 km
- 1000 BaseSX, optical SC port
  for direct connection to Industrial Ethernet FO cables.
  Multimode fiber-optic cable up to 750 m
- 1000 BaseLX, optical SC port
  for direct connection to Industrial Ethernet FO cables.
  Single mode fiber-optic cable up to 10 km

All connections for data cables are located at the front, and the connection for the power supply is at the bottom.


SCALANCE XB-000 unmanaged

■ Function

- Construction of electrical Industrial Ethernet line or star topologies
- Automatic data transmission rate detection (10/100/1000 Mbit/s), with autosensing and autocrossover function
- Easy network configuration and network expansion; no limitation on network expansion with cascading of the switches

### *Network topology and network configuration*

The SCALANCE XB-000 switches are typically installed with the stations to be connected in a control cabinet or control box.

When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE XB-000 switches:
  - max. 100 m
  - max. 10 m via patch cables with TP Cord
  - max. 100 m via Industrial Ethernet FC Outlet RJ45, IE FC Standard Cable and TP Cord
- Length of the fiber-optic cables:
  - max. 5 km with Industrial Ethernet FO cables Multimode
  - max. 26 km with Industrial Ethernet FO cables Single mode

Electrical line topology with SCALANCE XB005 and XB008, or SCALANCE XB005G and XB008G

Electrical star topology with SCALANCE XB005 or SCALANCE XB005G

Mixed star topology with SCALANCE XB004-1 or SCALANCE XB004-1G

SCALANCE XB-000 unmanaged

■ **Function** (continued)

G_IK10_XX_10316

2

Overview

The unmanaged Industrial Ethernet switches of the SCALANCE X-100 product line are optimized for installing Industrial Ethernet networks at transmission rates of 10/100 Mbit/s in a line and star topology.

- Depending on the port type of the devices, the connection to a station or network is electrical or optical with Power-over-Ethernet (PoE) functionality according to IEEE 802.3at Type 1 (corresponds to IEEE 802.3af)
- Rugged metal enclosure for space-saving cubicle mounting on standard rails, S7-300 DIN rail or for wall mounting
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Redundant power supply
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button

Benefits

g **e** **t** **Designed for Industry**
get

- Ideal solution for configuring Industrial Ethernet line and star topologies
- Reduction of network installation costs by transmitting data and energy (Power-over-Ethernet) via the conventional 4-core Industrial Ethernet cable (only SCALANCE X108PoE)
- Additional power supply units can be omitted thanks to generating the Power-over-Ethernet voltage (48 V DC) direct at the switch (SCALANCE X108PoE only)
- Space-saving installation in the cabinet thanks to the compact design in S7-300 format
- Reliable plug-in connection thanks to industry-standard device connection in conjunction with PROFINET-compliant FastConnect connectors
- Installation is possible without a patch field by means of IE FC RJ45 Plug 180 and IE FC Standard Cable
- Use of uncrossed connection cables possible by means of integrated autocrossover function

Application

The switches of the SCALANCE X-100 product line support the inexpensive construction of Industrial Ethernet line or star topologies with switching functions. They are designed for installation in the control cabinet.

Product versions

SCALANCE X104-2 / SCALANCE X106-1 / SCALANCE X112-2

- Construction of optical Industrial Ethernet line or star topologies:
  - SCALANCE X104-2;
    with 4 electrical ports and 2 optical ports
  - SCALANCE X106-1;
    with 6 electrical ports and 1 optical port
  - SCALANCE X112-2;
    with 12 electrical ports and 2 optical ports
- Diagnostics on the device using LEDs (power, link status, data traffic) and signaling contact (alarm screen form can be set using a button on the device)
- The RJ45 ports are suitable for industrial use and have additional retaining collars:
  optimal for connecting the IE FC RJ45 Plug 180

SCALANCE X108 / SCALANCE X108PoE / SCALANCE X116 / SCALANCE X124

- Construction of electrical Industrial Ethernet star and line topologies
  - SCALANCE X108
    with eight electrical ports
  - SCALANCE X108PoE
    with eight electrical ports, two of which have Power-over-Ethernet functionality
  - SCALANCE X116
    with 16 electrical ports
  - SCALANCE X124
    with 24 electrical ports
- Diagnostics on the device using LEDs (power, link status, data traffic) and signaling contact (alarm screen form can be set using a button on the device)
- The RJ45 ports are suitable for industrial use and have additional retaining collars:
  optimal for connecting the IE FC RJ45 Plug 180

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SCALANCE X-100 unmanaged

Design

The SCALANCE Industrial Ethernet switches with a rugged metal housing are optimized for mounting on a standard rail and an S7-300 rail. Direct wall mounting in various positions is also possible. Due to the dimensions of the housing that conform to those of SIMATIC S7-300, the devices are optimized for integration in an automation solution with S7-300 components.

The SCALANCE X-100 switches have:

- A 4-pole terminal block for connecting the redundant supply voltage (2 x 24 V DC)
- A row of LEDs for displaying status information (power, link status, data communication, signaling contact)
- A 2-pole terminal block for connecting the floating signaling contact
- A SET button for on-site configuration of the signaling contact

The following port types are available:

- *10/100BaseTX, RJ45 port;*
  automatic detection of the transmission rate (10 or 100 Mbit/s), with autosensing and autocrossover functions for connecting IE FC cables using IE FC RJ45 Plug 180 up to 100 m
- *10/100BaseTX, RJ45 ports and Power-over-Ethernet functionality;*
  automatic detection of the transmission rate (10 or 100 Mbit/s), with autosensing and autocrossover functions for connecting IE FC cables using IE FC RJ45 Plug 180 up to 100 m and integrated Power-over-Ethernet functionality according to IEEE 802.3at Type 1
- *100BaseFX, BFOC port;*
  for direct connection to the Industrial Ethernet glass FOC up to 5 km

Function

- Construction of electrical and optical Industrial Ethernet line or star topologies
- Use of uncrossed connecting leads is possible due to integrated auto-crossover function of the ports
- Power supply of Power-over-Ethernet-capable terminal equipment via the data line for SCALANCE X108PoE
- Isolation of the load due to integrated switch functions
- Easy network configuration and network expansion; no limitation of the expansion of the network when switches of the SCALANCE X-100 product line are cascaded

Network topology and network configuration

The SCALANCE X-100 switches are typically installed with the stations to be connected in a control cabinet. They can be mixed electrically and optically in star and line topologies.

When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between SCALANCE X switches:
  - Max. 100 m with Industrial Ethernet FastConnect products
- Length of the TP cable between SCALANCE X switch and Power-over-Ethernet terminal equipment:
  - Max. 100 m with Industrial Ethernet FastConnect products
- Length of the fiber-optic cables:
  - Max. 5 km with Industrial Ethernet glass fiber-optic cables

Function (continued)

Star-shaped network topology with SCALANCE X124

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SCALANCE X-100 unmanaged

■ **Function** (continued)

Electrical and optical line topology with SCALANCE X112-2, X104-2 and X106-1 as well as connection and supply of data terminals with Power-over-Ethernet (PoE) by SCALANCE X108PoE

2

Function (continued)

Optical star topology with SCALANCE X106-1

Diagnostics

The following information is displayed by LEDs on site:

• Power

• Port status

• Data traffic

The Industrial Ethernet switches of the SCALANCE X-100 line can also be monitored over the floating signaling contact.

SIPLUS SCALANCE X-100 unmanaged

2

■ **Overview**

- The unmanaged Industrial Ethernet switches of the SCALANCE X-100 product line are optimized for installing Industrial Ethernet networks with 10/100 Mbit/s in a line and star topology
- Nodes or networks connected electrically, optically or electrically with Power-over-Ethernet functionality (PoE) in accordance with IEEE 802.3af
- Rugged metal housing for space-saving cubicle mounting on standard rails, S7-300 DIN rail or for wall mounting
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Redundant power supply
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

	SIPLUS SCALANCE X-100 unmanaged
Order number	**6AG1 104-2BB00-2AA3**
Order No. based on	**6GK5 104-2BB00-2AA3**
Ambient temperature range	-25 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions.
Ambient conditions	
Relative humidity	5 ... 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K
	658 ... 540 hPa (+3500 ... +5000 m) derating 20 K

[1] ISA-S71.04 severity level GX: Long-term load: SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d): SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

SCALANCE X-100 unmanaged media converters

2

Overview

The unmanaged Industrial Ethernet media converters of the SCALANCE X-100 product line are ideally suited to the conversion of different transmission media in Industrial Ethernet networks at data transfer rates of 10/100 Mbit/s in line, star and ring topologies.

- Electrical or optical connection to stations or network in accordance with the port type of the devices
- Rugged metal enclosure for space-saving cubicle mounting on standard rails, S7-300 DIN rail or for wall mounting
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Redundant power supply
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button
- Connection of existing 10 Mbit/s fiber-optic networks
- Connection of existing 10Base5 networks (e.g. SINEC H1)

Benefits

g e get · Designed for Industry

- Ideal solution for converting various transmission media in Industrial Ethernet line, star and ring topologies
- Space-saving installation in the cabinet thanks to the compact design in S7-300 format
- Reliable plug-in connection thanks to industry-standard device connection with PROFINET-compliant FastConnect connectors
- Integration of existing 10Base FL and/or 10Base5 networks
- Cost savings, since installation is possible without a patch field by means of IE FC RJ45 Plug and IE FC Standard Cable
- Uncrossed connecting cables can be used due to the integrated Autocrossover function

Application

The unmanaged media converters of the SCALANCE X-100 product line permit low-cost conversion of various transmission media within Industrial Ethernet line, star and ring topologies. They are designed for installation in the control cabinet.

Single, remote terminal units on network segments can be linked via the optical path of the SCALANCE X-100 media converters. Integration of an optical path into a redundant ring is also possible, as well as installation of the SCALANCE X-100 media converters into a standby link.

Product versions

SCALANCE X101-1, SCALANCE X101-1LD, SCALANCE X101-1POF, SCALANCE X101-1FL and SCALANCE X101-1AUI

- For converting electrical signals into optical signals in Industrial Ethernet line, star and ring topologies
- The Industrial Ethernet media converters have an electrical 10/100 Mbit/s RJ45 port and:
  - SCALANCE X101-1
    1x 100 Mbit/s BFOC port, optical (multimode, glass)
  - SCALANCE X101-1LD
    1x 100 Mbit/s BFOC port, optical (singlemode, glass)
  - SCALANCE X101-1POF
    1x 100 Mbit/s SC-RJ port, optical (plastic optical fiber, POF)
  - SCALANCE X101-1AUI
    1x 10 Mbit/s AUI interface with Sub-D connections
  - SCALANCE X101-1FL
    1x 10 Mbit/s BFOC port, optical (multimode, glass)
- Redundant power supply with 2 x 24 V DC
- Diagnostics on the device using LEDs (power, link status, data traffic) and signaling contact (alarm screen form can be set using a button on the device)
- The electric RJ45 port is industry-standard and features an additional retaining collar for connection of the IE FC RJ45 Plugs

SCALANCE X-100 unmanaged media converters

2

Design

The SCALANCE Industrial Ethernet media converters with a rugged metal enclosure are optimized for mounting on a standard rail and an S7-300 DIN rail. Direct wall mounting in various positions is also possible. Due to the housing dimensions that correspond to those of the S7-300, the devices are ideally suited for integration into an automation solution using S7-300 components.

The SCALANCE X-100 media converters feature:

- A 4-pole terminal block for connecting the redundant supply voltage (2 x 24 V DC)
- A row of LEDs for displaying status information (power, link status, data communication, signaling contact)
- A 2-pole terminal block for connecting the floating signaling contact
- A SET button for local configuration of the signaling contact and of cascading mode

The following port types are available:

- *10/100BaseTX, RJ45 port:*
  automatic detection of the data rate (10 or 100 Mbit/s), with autosensing and autocrossover function for connecting IE FC cables via IE FC RJ45 connectors over distances up to 100 m
- *100BaseFX, BFOC port* with glass fiber-optic cable:
  for direct connection to Industrial Ethernet glass fiber-optic cables up to 3000 m or 26000 m for configuring line, star or ring topologies
- *100BaseFX,SC RJ port* with POF fiber-optic cable:
  for direct connection to Industrial Ethernet POF fiber-optic cables up to 50 m or to Industrial Ethernet PCF fiber-optic cables up to 100 m for configuring line, star or ring topologies
- *10BaseFL, BFOC port* with glass fiber-optic cable:
  for direct connection to Industrial Ethernet glass fiber-optic cables up to 3000 m for configuring line, star or ring topologies
- *AUI, 15-pin Sub-D port*:
  for connecting an Industrial Ethernet AUI cable (connecting cable 727-1/drop cable) of up to 50 m to AUI transceiver (no terminal equipment)

Function

- Configuring electrical and optical Industrial Ethernet line, star or ring topologies
- Uncrossed connecting cables can be used due to Autocrossover function integrated in the TP ports
- Easy configuration and extension of the network; no limits to network extension when switches or media converters of the SCALANCE X-100 family are cascaded.
- Integration of existing 10Base FL and/or 10Base5 networks

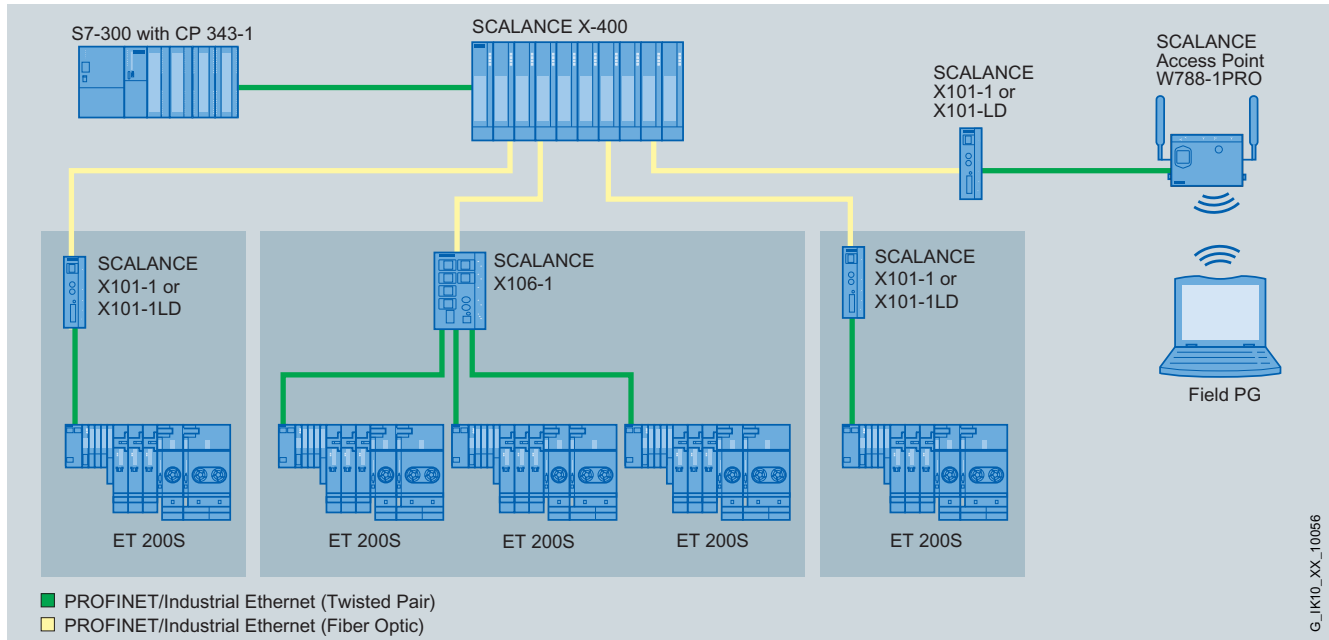
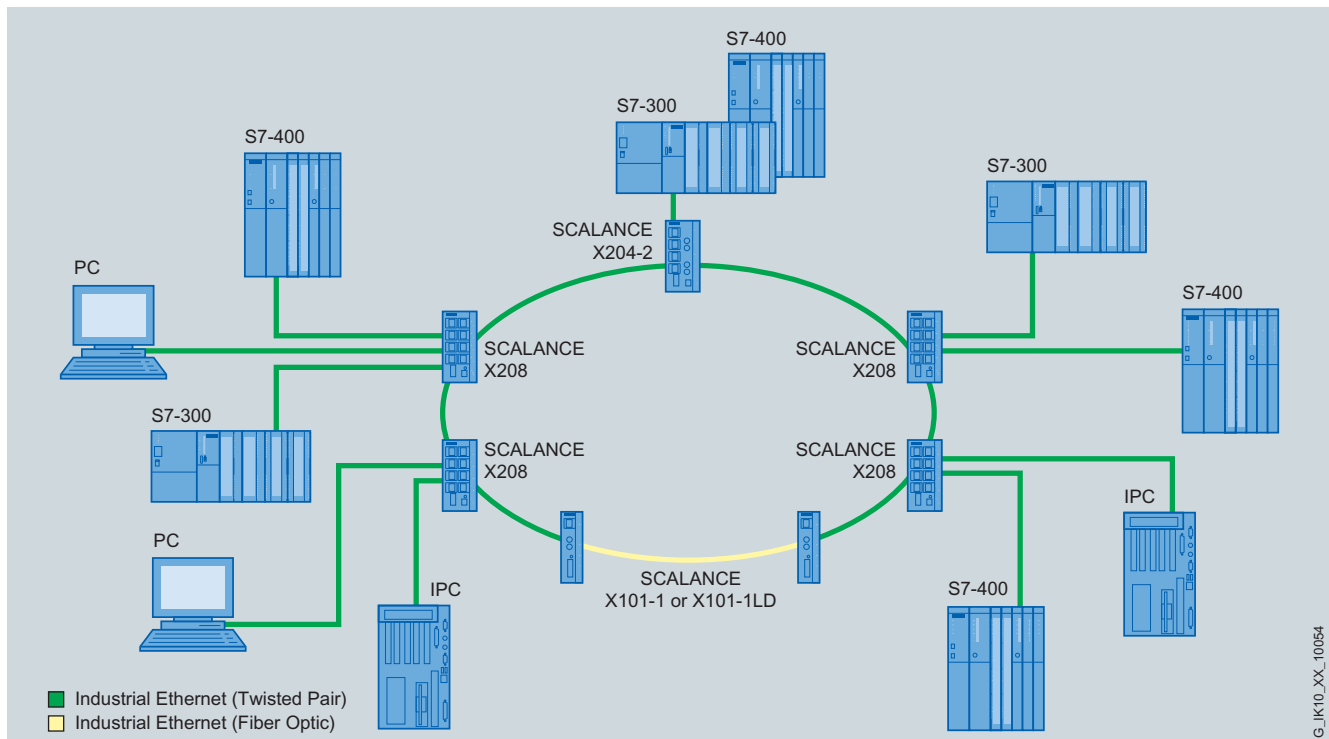
Function overview of Industrial Ethernet media converters

SCALANCE X-100 unmanaged media converters


■ **Function** (continued)

Network topology and network configuration

The SCALANCE X-100 media converters are typically accommodated in one control cabinet together with the nodes to be connected. They can be installed in line, star and ring topologies.


When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE X media converters:
  - Max. 100 m with Industrial Ethernet FastConnect products

- Length of the optical cables:
  - Max. 5 km with Industrial Ethernet multimode fiber-optic cables
  - Max. 26 km with Industrial Ethernet singlemode fiber-optic cables
  - Max. 100 m with Industrial Ethernet PCF fiber-optic cables
  - Max. 50 m with Industrial Ethernet POF fiber-optic cables
- Length of the AUI cable:
  - max. 50 m with Industrial Ethernet connecting cable 727-1 (AUI drop cable)

■ PROFINET/Industrial Ethernet (Twisted Pair)
■ PROFINET/Industrial Ethernet (Fiber Optic)

Optical star topology with SCALANCE X101-1/X101-1LD and remote SCALANCE W Access Point

■ Industrial Ethernet (Twisted Pair)
■ Industrial Ethernet (Fiber Optic)

Mixed ring topology with twisted-pair and fiber optic cables

■ Function (continued)

Industrial Ethernet

2

■ **Function** (continued)

Connection of a 10BaseFL segment to Industrial Ethernet (10/100 Mbit/s) with SCALANCE X101-1FL

Connection of a 10Base5 segment (e.g. SINEC H1) to Industrial Ethernet (10/100 Mbit/s) with SCALANCE X101-1AUI

Diagnostics

The following information is displayed on site by LEDs:
- Power
- Port status
- Data traffic

The Industrial Ethernet media converters of the SCALANCE X-100 product line can also be monitored using the floating signaling contact. Two media converters of the same type can be connected in cascading mode.

SIPLUS SCALANCE X-100 unmanaged / media converter

2

Overview

- The unmanaged Industrial Ethernet media converters of the SCALANCE X-100 product line are ideally suited for implementing various transmission media in Industrial Ethernet networks operating at 10/100 Mbit/s in a line, star and ring topology
- Electrical or optical connection to stations or network according to the device port type
- Rugged metal housing for space-saving cubicle mounting on standard rails, S7-300 DIN rail or for wall mounting
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Redundant power supply
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button
- Connection of existing 10 Mbit/s fiber-optic networks
- Connection of existing 10Base5 networks (e.g. SINEC H1)

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

Function overview SCALANCE X-200 managed: Software

2

■ Overview

The managed Industrial Ethernet switches of the SCALANCE X-200 line are optimized for setting up Industrial Ethernet networks at data transfer rates of 10/100 Mbit/s in a line, star or ring topology.

- Integrated redundancy manager for constructing Fast Ethernet ring topologies with high-speed media redundancy (excluding SCALANCE X208PRO)
- Electrical or optical connection to stations or network in accordance with the port type of the devices
- Rugged metal enclosure in S7-300 format for mounting on standard rail, S7-300 standard mounting rail or for direct wall mounting in various positions
- Rugged, industry-standard node connections with PROFINET-compliant RJ45 connectors that are latched onto the housing to provide additional strain and bending relief
- Redundant power supply
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network

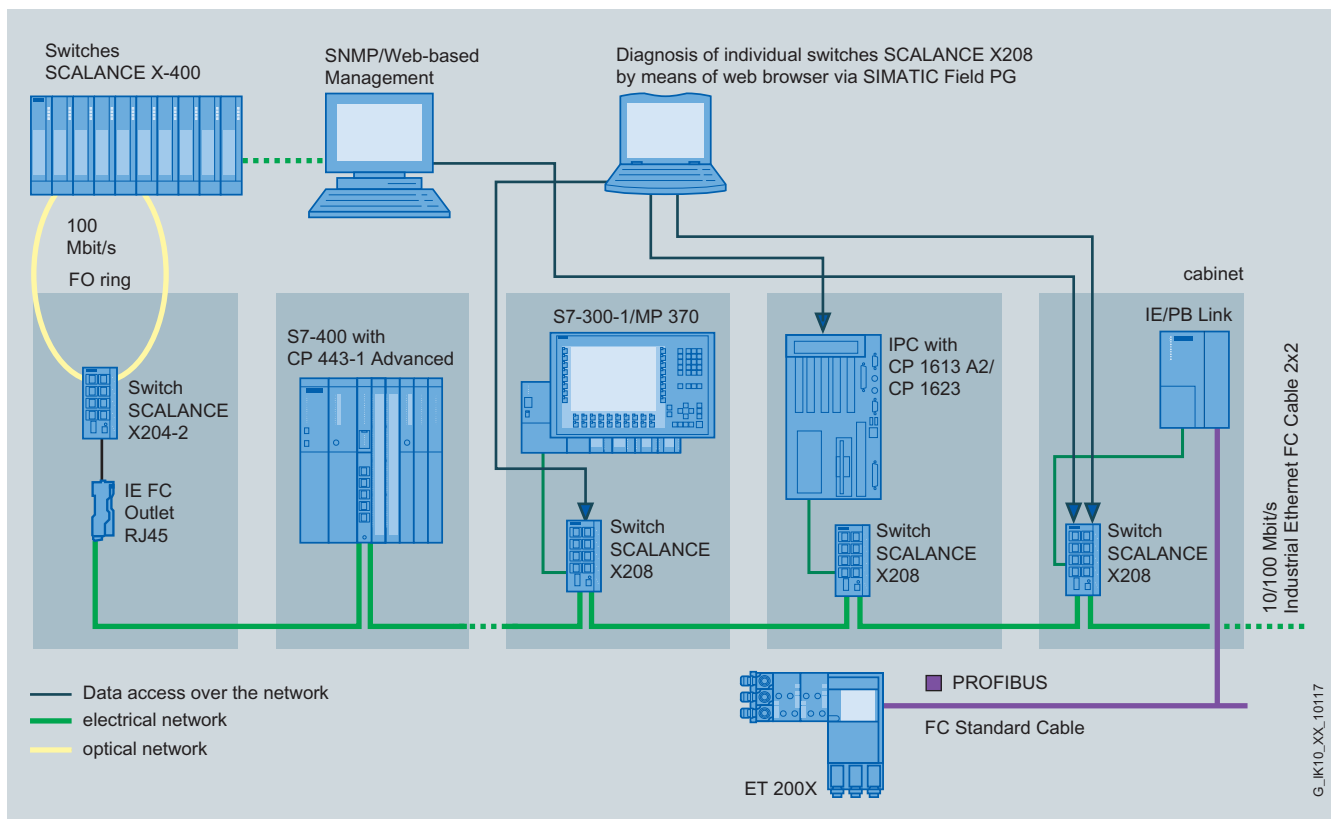
■ Benefits

get   Designed for Industry

- Ideal solution for configuring Industrial Ethernet line, star and ring topologies
- Reliable plug-in connection thanks to rugged, industry-standard device connection in conjunction with PROFINET-compliant FastConnect connectors
- High network availability through design of redundant ring structures (Redundancy Manager integrated, except for SCALANCE X208PRO)
- Integration of the SCALANCE X-200 switches in the existing network management infrastructure through SNMP access point
- Easy integration in the process diagnosis and system diagnosis with PROFINET
- Configuration and diagnostics integrated into STEP 7 provide significant benefits during engineering, commissioning, and the operating phase of a plant
- Module replacement without the need for a programming device, using the C-PLUG swap media for backing up the configuration data

■ Application

The SCALANCE X-200 Industrial Ethernet switches permit cost-effective configuration of Industrial Ethernet line, star or ring topologies with switching functionality for networks in which high availability or remote diagnostics options are required. The devices with IP30 degree of protection have been designed for use in the control cabinet. The SCALANCE X208PRO, is designed to the IP65 degree of protection for installation outside the control cabinet. The SCALANCE X204-2TS (TS = Transportation Systems) is suitable for use in railway applications due to its specification according to EN 50155.

SCALANCE X-200 managed


2

Application (continued)

Product versions

- Switches with electrical and optical ports <u>for glass multimode FOC</u> up to 5 km:
  - *SCALANCE X204-2;*
    for constructing optical line or ring topologies with four electrical ports and two optical ports
  - *SCALANCE X204-2TS (degree of protection IP20);*
    for setting up optical line or ring topologies with four electrical ports and two optical ports especially for railway applications (EN 50155) with extended temperature range
  - *SCALANCE X206-1;*
    for setting up star topologies with 6 electrical ports and 1 optical port,
    line or ring topologies with electrical and optical transmission paths
  - *SCALANCE X212-2;*
    for constructing optical line or ring topologies with 12 electrical ports and two optical ports

- Switches with electrical and optical ports <u>for glass single mode FOC</u> up to 26 km:
  - *SCALANCE X204-2LD;*
    for constructing optical line or ring topologies with 4 electrical ports and 2 optical ports
  - *SCALANCE X206-1LD;*
    for constructing star topologies with 6 electrical ports and 1 optical port,
    line or ring topologies with electrical and optical transmission paths
  - *SCALANCE X212-2LD;*
    for constructing optical line or ring topologies with 12 electrical ports and 2 optical ports

- Switches with electrical ports for configuring electrical Industrial Ethernet line, star or ring topologies:
  - *SCALANCE X208;*
    with 8 electrical ports for mounting in the control cabinet
  - *SCALANCE X208PRO (IP65 degree of protection);*
    with 8 electrical ports especially for use outside the control cabinet (M12 connection system)
  - *SCALANCE X216;*
    with 16 electrical ports for mounting in the control cabinet
  - *SCALANCE X224;*
    with 24 electrical ports for mounting in the control cabinet

Features:

- The RJ45 ports are industry-standard and feature additional retaining collars (except for SCALANCE X208PRO), for connection to the IE FC RJ45 Plug 180

- The eight PROFINET-compliant M12 ports of the SCALANCE X208PRO are designed with IP65 degree of protection for connection to the IE M12 Plug PRO or the pre-assembled IE M12 connecting cable

- The SCALANCE X208PRO can be mounted on a DIN rail or S7-300 rail or direct on the equipment or machine;
  the status information can be read off regardless of the mounting position thanks to the angled LED strip.

- Power can also be supplied to the SCALANCE X208PRO from outside the control cabinet from the PS791-1PRO power supply module at 230 V AC.

Diagnostics access over SNMP and Web browser with SCALANCE X208

2

Design

The SCALANCE X-200 Industrial Ethernet switches with a rugged metal housing are optimized for mounting on a standard rail and an S7-300 rail. Direct wall mounting in various positions is also possible. Thanks to the S7-300 housing dimensions, the devices are suitable for integration into an automation solution with S7-300 components.

The switches with IP20/IP30 degree of protection feature:

- A 4-pole terminal block for connecting the redundant supply voltage (2 x 24 V DC)
- A row of LEDs to indicate the status information (power, link status, data exchange, power supply, signaling contact)
- A 2-pole terminal block for connecting the floating signaling contact
- A SET button for on-site configuration of the signaling contact

The SCALANCE X208PRO with IP65 degree of protection features:

- 2 x M12 interfaces for connecting the redundant supply voltage (2 x 24 V DC)
- A row of LEDs to indicate the status information (power, link status, data exchange, power supply, signaling contact)
- An M12 interface for connecting the isolated signaling contact

The SCALANCE X-200 switches are available with the following port types:

- *10/100BaseTX, RJ45 or M12 connection;*
  RJ45 or M12 port, automatic detection of the data rate (10 or 100 Mbit/s), with Autosensing and Autocrossover functions for connecting IE FC cables using IE FC RJ45 Plug 180 or IE M12 Plug PRO up to 100 m.
- *100BaseFX, BFOC connection technique;*
  BFOC ports for direct connection to Industrial Ethernet glass fiber-optic cables up to 5 km (multimode FOC) or up to 26 km (singlemode FOC) for configuring line, ring and star topologies.

Function

- Configuring electrical and optical Industrial Ethernet line, star and ring topologies
- Fast redundancy in the ring with High Speed Redundancy (HSR); up to 0.3 seconds for reconfiguration of the ring with 50 switches in the ring
- The functioning of the ring is continuously monitored by the integrated redundancy manager (with the exception of SCALANCE X208 PRO). It recognizes failure of a transmission path in the ring or failure of a SCALANCE X-200 and activates the substitute path within 0.3 seconds
- Use in ring topologies (100 Mbit/s) together with SCALANCE X-300, SCALANCE X-400 and SCALANCE X-500
- Uncrossed connecting cables can be used due to Autocrossover function integrated in the ports
- Easy diagnostics using signaling contact, SNMP and Web browser
- Easy copper cable diagnostics with Web browser for localizing cable breaks
- Integration into the diagnostics of a PROFINET I/O controller with expanded diagnostics functions for a consistent diagnostics concept, including network infrastructure
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Optimized support of PROFINET real-time communication (RT) through prioritizing
- Fast device replacement in the event of a fault by using the optional C-PLUG swap medium (not included in scope of supply)

Network topology and network configuration

The Industrial Ethernet SCALANCE X-200 switches with IP30 degree of protection are usually installed in a control cabinet together with the stations to be connected. Electrical and optical versions can be installed together in star, line and ring topologies. The SCALANCE X208PRO is designed for installation outside the control cabinet.

When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE X switches:
  - Max. 100 m with IE FC cable and IE FC RJ45 Plug 180 or IE FC M12 Plug PRO
  - Max. 10 m using patches with TP cord
- Length of the optical cables
  - Max. 5000 m with Industrial Ethernet glass fiber optic cables (multimode)
  - Max. 26000 m with Industrial Ethernet glass fiber optic cables (singlemode)
- IP Address:
  The IP address is assigned by means of the DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using the supplied software tool PST (Primary Setup Tool) or STEP 7.

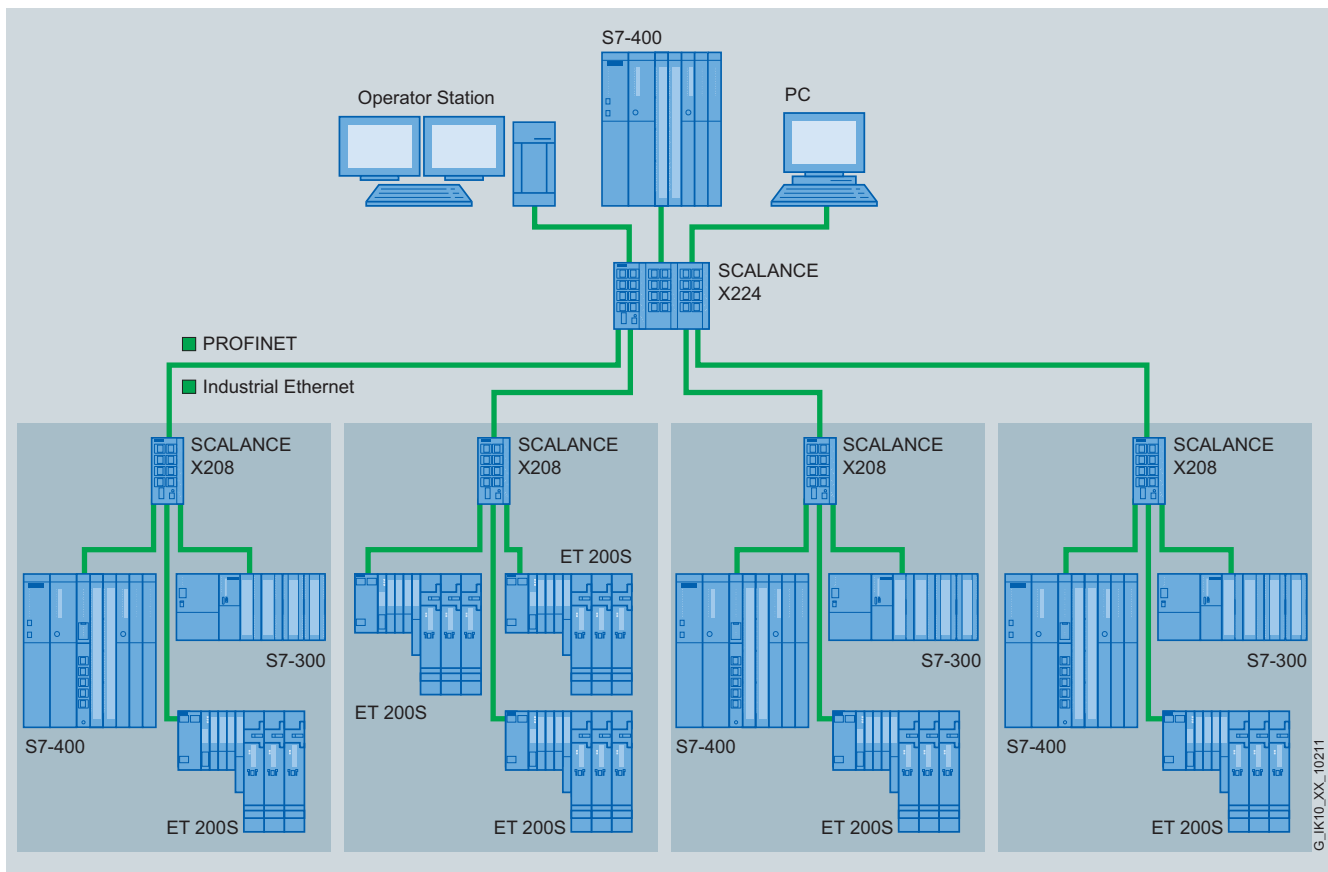
PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

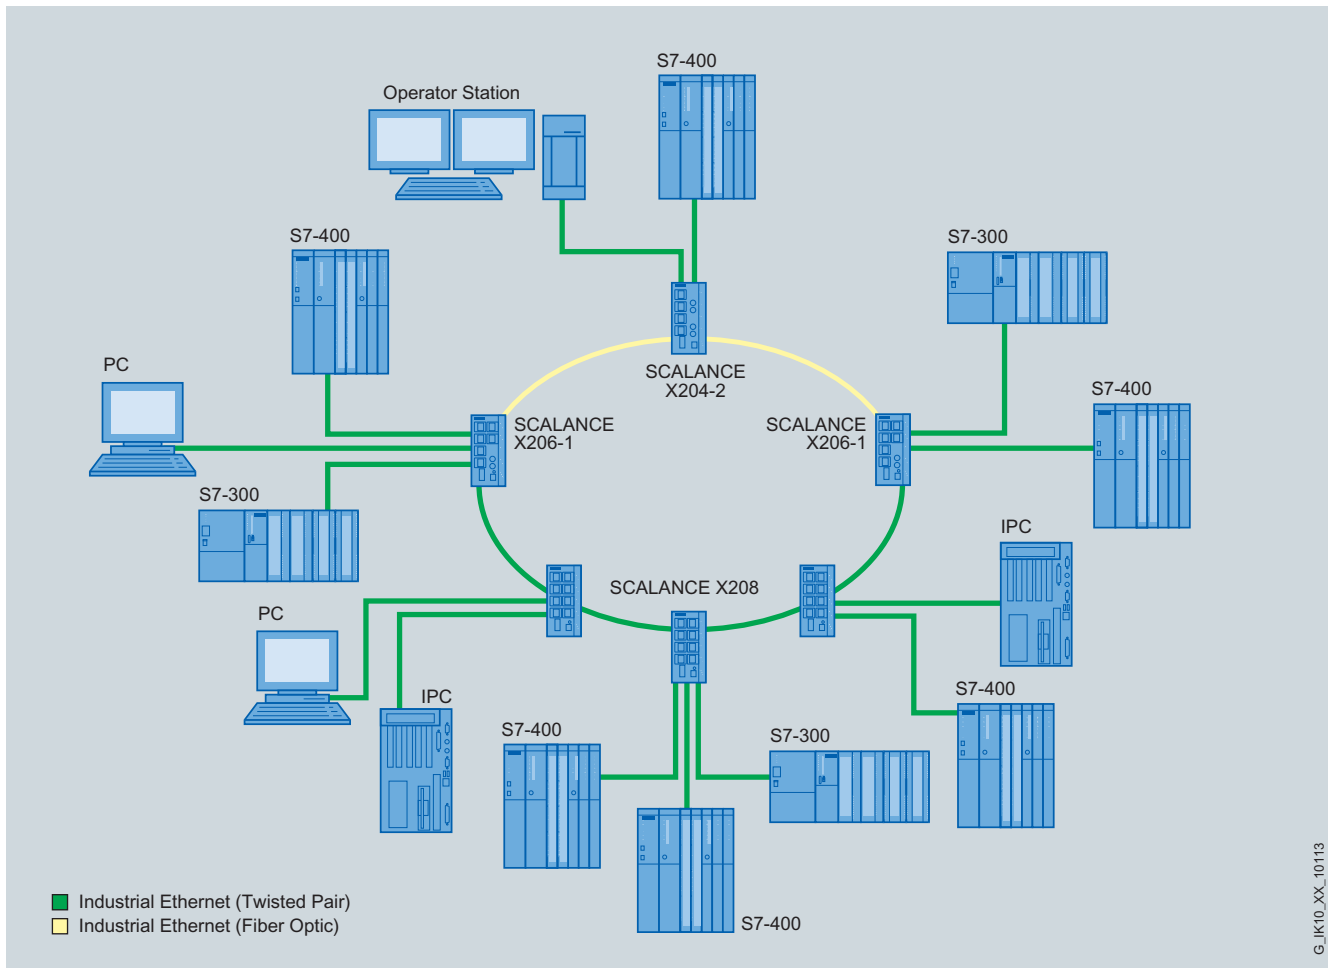
SCALANCE X-200 managed

2

■ **Function** (continued)

Star network topology with SCALANCE X208PRO outside the control cabinet and 230 V AC power supply





Star topology with SCALANCE X224

■ **Function** (continued)

High-speed redundancy in mixed ring with fiber-optic and twisted-pair cables

Commissioning and diagnosis

PROFINET diagnostic interrupts from SCALANCE X 200 Switches can be displayed with the appropriate SIMATIC Engineering Tools and processed in the controller with expanded diagnostics function. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

The SCALANCE X-200 Industrial Ethernet switches can also be integrated into a network management system such as SINEMA Server through the standardized Simple Network Management Protocol (SNMP). If faults occur on the device, error messages (SNMP traps) can be sent to a network management system or as e-mail to a specified network administrator.

The integral Web server enables configuration and diagnostics settings to be made using a standard browser (e.g. port configuration). Statistical information can also be read out over the Web server (e.g. port capacity utilization).

The following information is displayed on site by LEDs:

● Power
● Port status
● Data traffic
● Signaling contact
● Redundancy manager function
  (excluding SCALANCE X208 PRO)

The Industrial Ethernet switches of the SCALANCE X-200 line can also be monitored using the floating signaling contact.

Order No.	6GK5 206-1BB10-2AA3	6GK5 206-1BC10-2AA6	6GK5 208-0BA10-2AA3	6GK5 208-0HA00-2AA6
Product type designation	**SCALANCE X206-1**	**SCALANCE X206-1LD**	**SCALANCE X208**	**SCALANCE X208PRO**
Design of electrical/optical connections for network components or terminal equipment				
Design of electrical connection				
• for network components or terminal equipment	RJ45 port	RJ45 port	RJ45 port	M12 port, 4-pin, d-coded
• for signaling contact	2-pin terminal block	2-pin terminal block	2-pin terminal block	5-pin M12 socket (b-coded)
• for power supply	4-pin terminal block	4-pin terminal block	4-pin terminal block	4-pin M12 interface (a-coded)
Number of optical connections for fiber-optic cables at 100 Mbit/s	1	1	-	-
Design of optical connection for fiber-optic cables at 100 Mbit/s	BFOC port (multimode up to 5 km)	BFOC port (singlemode up to 26 km)	-	-
Coupled-in optical power referred to 1 mW				
• of transmitter output	-19 … -14 dB	-15 … -7 dB	-	-
• of the receiver input, maximum	-	-	-	-
Minimum optical sensitivity relative to 1 mW of the receiver input	-	-34 dB	-	-
Minimum required damping factor of FO transmission link	0 dB	0 dB	-	-
The range at the optical interface depends on the type of optical fiber used	0 … 5 km	0 … 26 km	-	-
Design of swap medium C-Plug	Yes	Yes	Yes	Yes
Inputs/outputs				
Operating voltage of signaling contacts with DC rated value	24 V	24 V	24 V	24 V
Maximum operating current of signal contacts with DC	0.1 A	0.1 A	0.1 A	0.1 A
Supply voltage, current consumption, power loss				
Type of supply voltage	DC	DC	DC	DC
External supply voltage	24 V	24 V	24 V	24 V
• Minimum	18 V	18 V	18 V	18 V
• Maximum	32 V	32 V	32 V	32 V
Product component: fusing at power supply input	Yes	Yes	Yes	Yes
Design of fusing at input for supply voltage	0.6 A / 60 V	0.6 A / 60 V	0.6 A / 60 V	0.6 A / 60 V
Current consumption, maximum	0.22 A	0.2 A	0.185 A	0.185 A
Effective power loss at 24 V with DC	5.28 W	5.28 W	3.84 W	4.4 W
Permissible ambient conditions				
Ambient temperature				
• During operation	-40 °C … +60 °C	-40 °C … +60 °C	-40 °C … +60 °C	-20 … +70 °C
• During storage	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C
• During transport	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C
• Note	-	-	-	-
Relative humidity at 25 °C without condensation during operation, maximum	95 %	95 %	95 %	95 %
IP degree of protection	IP30	IP30	IP30	IP 65/67

Industrial Ethernet Switches SCALANCE X-200

Industrial Ethernet switches with integral SNMP access, online diagnostics, copper cable diagnostics and PROFINET diagnostics for configuring line, star and ring topologies; with integrated redundancy manager (exception: SCALANCE X208PRO); incl. operating instructions, Industrial Ethernet network manual and configuration software on CD-ROM

- With electrical and optical ports for glass multimode FOC up to max. 5 km
  - **SCALANCE X204-2**
    with four 10/100 Mbit/s RJ45 ports and two fiber-optic ports | 6GK5 204-2BB10-2AA3
  - **SCALANCE X204-2TS**
    with four 10/100 Mbit/s RJ45 ports and two fiber-optic ports with extended temperature range and EN 50155 approval for railway applications | 6GK5 204-2BB10-2CA2
  - **SCALANCE X206-1**;
    with six 10/100 Mbit/s RJ45 ports and one fiber-optic port | 6GK5 206-1BB10-2AA3
  - **SCALANCE X212-2**
    with 12 10/100 Mbit/s RJ45 ports and two fiber-optic ports | 6GK5 212-2BB00-2AA3

- With electrical and optical ports for glass single mode FOC up to max. 26 km
  - **SCALANCE X204-2LD**
    with four 10/100 Mbit/s RJ45 ports and two long-distance fiber-optic ports | 6GK5 204-2BC10-2AA3
  - **SCALANCE X206-1LD**;
    with six 10/100 Mbit/s RJ45 ports and one long-distance fiber-optic port | 6GK5 206-1BC10-2AA3
  - **SCALANCE X212-2LD**
    with twelve 10/100 Mbit/s RJ45 ports and two long-distance fiber-optic ports | 6GK5 212-2BC00-2AA3

- With electrical ports
  - **SCALANCE X208**;
    with eight 10/100 Mbit/s RJ45 ports | 6GK5 208-0BA10-2AA3
  - **SCALANCE X208PRO**
    with eight 10/100 Mbit/s M12 ports, incl. eleven M12 dust protection caps, IP65 degree of protection | 6GK5 208-0HA00-2AA6
  - **SCALANCE X216**
    with sixteen 10/100 Mbit/s RJ45 ports | 6GK5 216-0BA00-2AA3
  - **SCALANCE X224**
    with twenty-four 10/100 Mbit/s RJ45 ports | 6GK5 224-0BA00-2AA3

Accessories

IE FC TP Standard Cable GP 2 x 2 (Type A) — 6XV1 840-2AH10

4-core, shielded TP installation cable for connection to IE FC Outlet RJ45 / IE FC RJ45 Plug; PROFINET-compliant; with UL approval; sold by the meter; max. length 1000 m, minimum order 20 m

FO Standard Cable GP 50/125/1400 [1] [2] — 6XV1 873-2A

Multimode cable, sold by the meter; max. length 1000 m; minimum order 20 m;

FO Robust Cable GP 4E9/125/90 — 6XV1 843-2R

Singlemode cable, sold by the meter; max. length 1000 m; minimum order 20 m

FC FO Standard Cable GP 62.5/200/230 — 6XV1 847-2A

FC FO standard cable for fixed routing indoors with PVC sheath; sold by the meter max. length 1000 m; minimum order 20 m

IE FC RJ45 Plug 180 2 x 2

RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; with 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface
- 1 pack = 1 unit — 6GK1 901-1BB10-2AA0
- 1 pack = 10 units — 6GK1 901-1BB10-2AB0
- 1 pack = 50 units — 6GK1 901-1BB10-2AE0

FC BFOC Plug — 6GK1 900-1GB00-0AC0

Screw connector for on-site assembly on FC fiber-optic cable; (1 pack = 20 units + cleaning cloths)

IE FC M12 Plug PRO

M12 plug connector for connection of Industrial Ethernet FC installation cables; 4-pole, D-coded, metal enclosure, IP65 degree of protection, pin insert; 180° cable outlet; for network components and Industrial Ethernet stations with IP65/IP67 degree of protection
- 1 pack = 1 unit — 6GK1 901-0DB20-6AA0
- 1 pack = 8 units — 6GK1 901-0DB20-6AA8

[1] Special fiber-optic cables, lengths and accessories available on request
[2] Special tools and trained personnel are required for pre-assembling glass fiber-optic cables

SIPLUS SCALANCE X-200 managed

2

■ **Overview**

- The managed Industrial Ethernet switches of the SCALANCE X-200 product line are optimized for installing Industrial Ethernet networks with 10/100 Mbit/s in a line, star and ring topology
- Integrated redundancy manager for constructing Fast Ethernet ring topologies with high-speed media redundancy (excluding SCALANCE X208 PRO)
- Electrical or optical connection to stations or network according to the device port type
- Fast media redundancy due to the integrated redundancy manager for Fast Ethernet
- Rugged metal housing in S7-300 format for mounting on standard rail, S7-300 standard mounting rail or for direct wall mounting in various positions
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Redundant power supply
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button
- The devices feature PROFINET diagnostics, SNMP access, integral web server and automatic e-mail sending function for remote diagnosis and signaling over the network.

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

Overview

The managed Industrial Ethernet switches of the SCALANCE XF-200 line are optimized for setting up Industrial Ethernet networks at data transfer rates of 10/100 Mbit/s in a line, star or ring topology.

- Integrated redundancy manager for constructing Fast Ethernet ring topologies with fast media redundancy
- Electrical or optical connection to stations or network in accordance with the port type of the devices
- Enclosure in ET 200S format (slim design) for use in small control boxes
- Rugged, industry-standard node connections with PROFINET-compliant RJ45 connectors that latch onto the enclosure to offer additional strain and bending relief
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network

Benefits

g e**get** Designed for Industry

- Saves space in the control cabinet and uses smaller control boxes due to slim design in the format of the ET 200S distributed I/O
- Simple connection and disconnection of the RJ45 plug by means of easily accessible RJ45 sockets angled downward on the device
- High availability of the network thanks to:
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager integrated)
  - Easy device replacement by means of plug-in C-PLUG swap medium
- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 ports
- Protection of investment due to integration into existing network management systems by means of standardized SNMP access
- Time savings during engineering, commissioning and in the operating phase of a plant by using the configuration and diagnostics integrated in STEP 7

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

**SCALANCE XF-200 managed**

Application

The SCALANCE XF-200 Industrial Ethernet switches permit cost-effective configuration of Industrial Ethernet line, star or ring topologies with switching functionality for networks in which high availability or remote diagnostics options are required. The devices with degree of protection IP20 are designed for operation in the control cabinet.

Product versions

- Switches with electrical and optical ports for glass multimode FOC up to 5 km:
  - *SCALANCE XF204-2;*
    4 x 10/100 Mbit/s RJ45 port, electrical
    2 x 100 Mbit/s BFOC port, optical
  - *SCALANCE XF206-1;*
    6 x 10/100 Mbit/s RJ45 port, electrical
    1 x 100 Mbit/s BFOC port, optical
- Switches with electrical ports:
  - *SCALANCE XF204;*
    4 x 10/100 Mbit/s RJ45 port, electrical
  - *SCALANCE XF208;*
    8 x 10/100 Mbit/s RJ45 port, electrical

Characteristics:

- Diagnostics on the device by means of LEDs (power, link status, data traffic)
- Remote diagnostics by means of signaling contact, PROFINET, SNMP, and Web browser
- The RJ45 sockets are designed to be industry-compatible with additional sleeves, for connection of the IE FC RJ45 Plug 180

Ring topology with SCALANCE X-200 and XF-200

Legend:
- ■ Industrial Ethernet (Twisted Pair)
- □ Industrial Ethernet (Fiber Optic)

SCALANCE XF-200 managed

2

■ **Design**

The SCALANCE XF-200 managed Industrial Ethernet switches are designed for installation on a standard DIN rail. With their enclosure in ET 200S format (slim design), the devices are optimally suited for integration in automation solutions in small control boxes together with the ET 200S.

The switches with IP20 degree of protection feature:

- A 4-pole terminal block for connecting the redundant supply voltage (2 x 24 V DC)
- A row of LEDs to indicate the status information (power, link status, data traffic, power supply, signaling contact)
- A 2-pole terminal block for connecting the isolated signaling contact
- A SET button for on-site configuration of the signaling contact

The SCALANCE XF-200 switches are available with the following port types:

- *10/100BaseTX, RJ45 connection;*
  RJ45 socket, automatic detection of the data rate (10 or 100 Mbit/s), with Autosensing and Autocrossover functions for connecting IE FC cables using the IE FC RJ45 Plug 180.
- *100BaseFX, BFOC connection technique;*
  BFOC sockets for direct connection to Industrial Ethernet glass fiber-optic cables up to 5 km (multimode fiber-optic cable) for configuring line, ring, and star topologies.

■ **Function**

- Setup of electrical and optical Industrial Ethernet line, star and ring topologies
- Fast redundancy in the ring with High Speed Redundancy (HSR); up to 0.3 seconds for reconfiguration of the ring with 50 switches in the ring
- Fast redundancy in the ring with PROFINET-compliant Media Redundancy Protocol (MRP); max. 0.2 seconds required for reconfiguration of the ring with 50 switches in the ring
- The functioning of the ring is continuously monitored by the integrated redundancy manager. It recognizes failure of a transmission path in the ring or failure of a SCALANCE XF-200 and activates the substitute path within 0.3 or 0.2 seconds
- Use in ring topologies (100 Mbit/s) together with SCALANCE X-400, SCALANCE X-300, SCALANCE X-200, SCALANCE X-200IRT
- Uncrossed connecting cables can be used due to Autocrossover function integrated in the ports
- Load disconnection through integral switch functionality
- Easy diagnostics using signaling contact, SNMP and Web browser
- Easy copper cable diagnostics with Web browser for localizing cable breaks
- Integration into the diagnostics of a PROFINET I/O controller with expanded diagnostics functions for a consistent diagnostics concept, including network infrastructure
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Fast device replacement in the event of a fault by using the optional C-PLUG swap medium (not included in scope of supply)

Network topology and network configuration

The SCALANCE XF-200 Industrial Ethernet switches with IP20 degree of protection are usually installed in a control cabinet together with the stations to be connected. Electrical and optical versions can be installed together in star, line and ring topologies.

When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE XF switches:
  - Max. 100 m with IE FC cable and IE FC RJ45 Plug 180
  - Max. 10 m using patches with TP cord
- Length of the optical cables
  - Max. 5000 m with Industrial Ethernet glass fiber-optic cables (multimode)
- IP address:
  The IP address is assigned using the DHCP (Dynamic Host Configuration Protocol) mechanism. If there is no corresponding server in the network, the IP address can be assigned using the supplied software tool PST (Primary Setup Tool) or STEP 7. The SCALANCE XF-200 switches are configured with STEP 7.

Commissioning and diagnostics

PROFINET diagnostic interrupts from SCALANCE XF-200 switches can be displayed with the appropriate SIMATIC Engineering Tools and processed in the controller with expanded diagnostics function. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

The SCALANCE XF-200 Industrial Ethernet switches can also be integrated into a network management system through the standardized protocol SNMP (Simple Network Management Protocol). In the event of a fault in the device, error messages (SNMP traps) can be sent to a network system or as e-mail to a specified network administrator.

The integral Web server enables configuration and diagnostics settings to be made using a standard browser (e.g. port configuration). Statistical information can also be read out over the Web server (e.g. port capacity utilization).

The following information is displayed by LEDs on site:

- Power
- Port status
- Data traffic
- Signaling contact
- Redundancy manager function

The Industrial Ethernet switches of the SCALANCE XF-200 line can also be monitored using the floating signaling contact.

Function overview SCALANCE X-200IRT managed: Software

Overview

SCALANCE X-200IRT switches are especially designed for constructing isochronous real-time (IRT) Industrial Ethernet networks in line, star and ring topologies at transmission rates of 10/100 Mbit/s (Redundancy Manager integrated); construction of redundant ring connections possible.

- Optimized performance due to combination of the switching mechanisms "Cut Through" and "Store and Forward"
- Fast media redundancy due to the integrated redundancy manager for Fast Ethernet
- Rugged, industry-standard station connections with PROFINET-compatible plug-in connectors that offer additional strain relief and bending strain relief thanks to latching on the enclosure
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network
- Different device versions with copper and fiber-optic interfaces (BFOC, SC RJ)
- Implementation of cabinet-free plant concepts with PROFINET-compliant push pull connection systems with device versions with IP65/67 protection

Benefits

get Designed for Industry

- The ideal solution for constructing isochronous real-time (IRT) Industrial Ethernet segments especially in line, star and ring topologies with copper and fiber-optic cabling (glass FOC, PCF FOC, POF FOC)
- Reliable data communication thanks to rugged, industry-standard device connection using PROFINET-compatible connectors (IE FC RJ45 Plug) that offer additional strain relief and bending strain relief thanks to latching on the enclosure
- High network availability in ring topologies, without reconfiguration times, when using the PROFINET-compliant MRPD process (**M**edia **R**edundancy for **P**lanned **D**uplication according to IEC 61158)
- Fast and easy diagnosis with LEDs on the device, through the integral Web server and through signaling contacts
- Easy integration in the process diagnosis and system diagnosis with PROFINET
- Configuration and diagnostics integrated into STEP 7 provide significant benefits during the engineering, start-up and operating phases of a plant
- Module replacement without the need for a programming device, using the C-PLUG swap media for backing up the configuration data

Application

The SCALANCE X-200IRT Industrial Ethernet switches permit the construction of isochronous real-time (IRT) Industrial Ethernet line and star topologies. Ring structures can also be designed using the integral redundancy manager (RM). Redundant ring connections are also possible. Thanks to innovative switching technology, the special requirements of automation with regard to line topology, isochronous mode for motion control applications and unlimited IT openness have been satisfied for the first time within a single technology based on the PROFINET standard.

The switches with IP30 degree of protection have been designed for use in the control cabinet. The switches with IP65/67 protection are designed for cabinet-free mounting (PROFINET-compliant push pull connection technology).

■ **Application** (continued)

Product versions

SCALANCE X204IRT

- For configuring electrical Industrial Ethernet linear bus, star or ring topologies with 4 electrical ports

SCALANCE X202-2IRT

- For configuring electrical/optical Industrial Ethernet linear bus, star or ring topologies with two electrical ports and two glass fiber optic ports

SCALANCE X202-2P IRT

- For configuring electrical/optical Industrial Ethernet linear bus, star or ring topologies with two electrical ports and two optical POF fiber optic ports

SCALANCE X201-3P IRT

- For configuring electrical/optical Industrial Ethernet linear bus, star or ring topologies with one electrical port and three optical POF fiber optic ports

SCALANCE X200-4P IRT

- For configuring optical Industrial Ethernet linear bus, star or ring topologies with 4 optical POF fiber-optic ports

SCALANCE X204 IRT PRO

- For the construction of electrical Industrial Ethernet linear, star or ring topologies with four electrical ports in degree of protection IP65/67 with PROFINET-compliant push-pull connection technology

SCALANCE X202-2P IRT PRO

- For the construction of electrical/optical Industrial Ethernet linear bus, star or ring structures with two electrical and two optical POF/PCF fiber optic ports in degree of protection IP65/67 with PROFINET-compliant push-pull connection technology

SCALANCE X201-3P IRT PRO

- For the construction of electrical/optical Industrial Ethernet linear bus, star or ring topologies with one electrical and three optical POF/PCF fiber optic ports in degree of protection IP65/67 with PROFINET-compliant push-pull connection technology

Applicable to all versions:

- Integral redundancy manager (RM)
- Device diagnostics with LEDs (power, link status, data communication)
- Remote diagnostics possible by means of signaling contact (signaling dialog box can be set on-site using pushbutton), PROFINET, SNMP and web browser
- Automatic e-mail send function
- Rugged, industry-standard station connections with PROFINET-compliant RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing

The SCALANCE X-200IRT switches, based on PROFINET, satisfy the real-time requirements of the field level up to high-performance motion control applications.

Real-time Ethernet

- Interfacing of the PROFINET IO-Devices to the PROFINET IO-Controller through high-performance, optimized data transmission
- Coexistence of isochronous mode for motion control applications and IT openness:
  Reaction-free transmission of real-time and non-real-time communication on the same line

Additionally through isochronous real-time (IRT) Ethernet

- Isochronous real-time communication based on the transmission procedure of the IEEE 802 standard by combining the switching mechanisms "Cut Through" and "Store and Forward"
- For drive controls, PROFINET with isochronous real-time is the best performing system worldwide with regard to its isochronous and deterministic response.
  With a cycle time of 1 ms, for example, axes can be controlled in isochronous mode whereby 50% of the bandwidth is available solely for IT communication.

■ **Design**

- The SCALANCE X-200IRT switches in a rugged metal housing with IP30 and IP65/67 degree of protection are optimized for mounting on a standard rail and an S7-300 rail. Direct wall mounting in various positions is also possible. Thanks to the S7-300 housing dimensions, the devices are suitable for integration into an automation solution with S7-300 components.

- The switches have a 4-pin terminal block for connecting the redundant supply voltage (2 x 24 V DC). The versions with IP65/67 protection have two 5-pin push-pull connectors via which the supply voltage is fed and forwarded. In addition, the load voltage circuit is also looped through for the ET 200pro devices further along the line. The devices with IP65/67 protection thus have no redundant voltage feed, but permit optimal integration into cabinet-free plant concepts with ET 200pro modules.
  The status information (power, link status, data traffic, voltage supply, signaling contact) is indicated by means of a row of LEDs.

The SCALANCE X-200IRT modules are available with the following port types:

- *10/100BaseTX, RJ45 connection*
  RJ45 port, automatic detection of the data rate (10 or 100 Mbit/s), with Autosensing and Autocrossover function for connecting IE FC cables over IE FC RJ45 Plug 180 over distances up to 100 m.

- *10/100BaseTX, push-pull RJ45 connection*
  RJ45 port, automatic detection of the data rate (10 or 100 Mbit/s), with Autosensing and Autocrossover function for connecting IE FC cables via IE FC RJ45 Plug PRO over distances up to 100 m

- *100BaseFX, BFOC connection technique*
  BFOC ports for direct connection to Industrial Ethernet glass fiber-optic cables up to 5000 m for configuring line and star topologies.

- *100BaseFX, SC RJ connections*
  SC RJ ports for connection to Industrial Ethernet POF (50 m) and PCF FOC (100 m) using SC RJ plug connectors

- *100BaseFX, push-pull SC RJ connections*
  SC RJ ports for connection to Industrial Ethernet POF (50 m) and PCF FOC (100 m) using SC RJ plug PRO connectors

2

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SCALANCE X-200IRT managed

Function

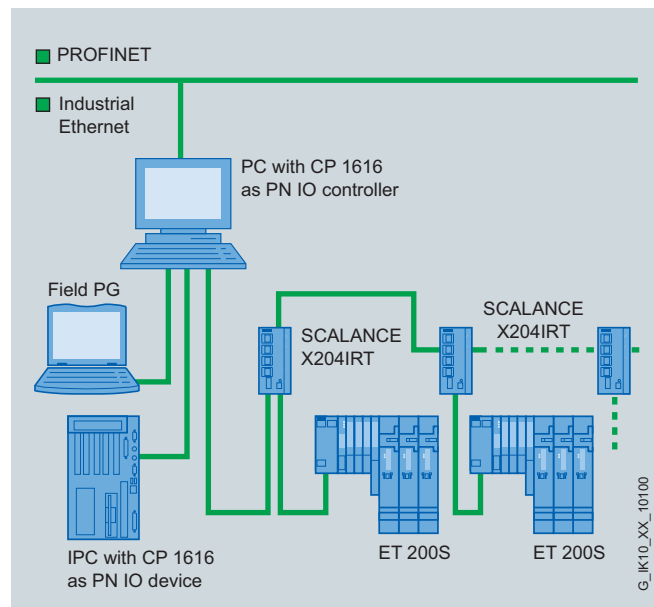
- 4-port switch for configuring electrical and optical Industrial Ethernet line, star and ring topologies
- Integral redundancy manager for design of ring topologies
- Integral standby function for redundant coupling of two rings
- Extremely short cycle times with highly accurate clock-pulse rates thanks to integrated real-time functions
- Bumpless ring redundancy by sending message frames twice in the ring, by means of PROFINET-compliant MRPD procedure (**M**edia **R**edundancy for **P**lanned **D**uplication according to IEC 61158)
- System-wide clock accuracy (less than 1 ms)
- Uncrossed connecting cables can be used due to Autocrossover function integrated in the ports
- Load disconnection through integral switch functionality
- Easy diagnostics using signaling contact, SNMP and Web browser
- Automatic e-mail function
- Integration into the diagnostics of a PROFINET IO-Controllers for a consistent diagnostics concept, including network infrastructure
- Fast device replacement in the event of a fault by using the optional C-PLUG swap medium (not included in scope of supply)

Network topology and network configuration

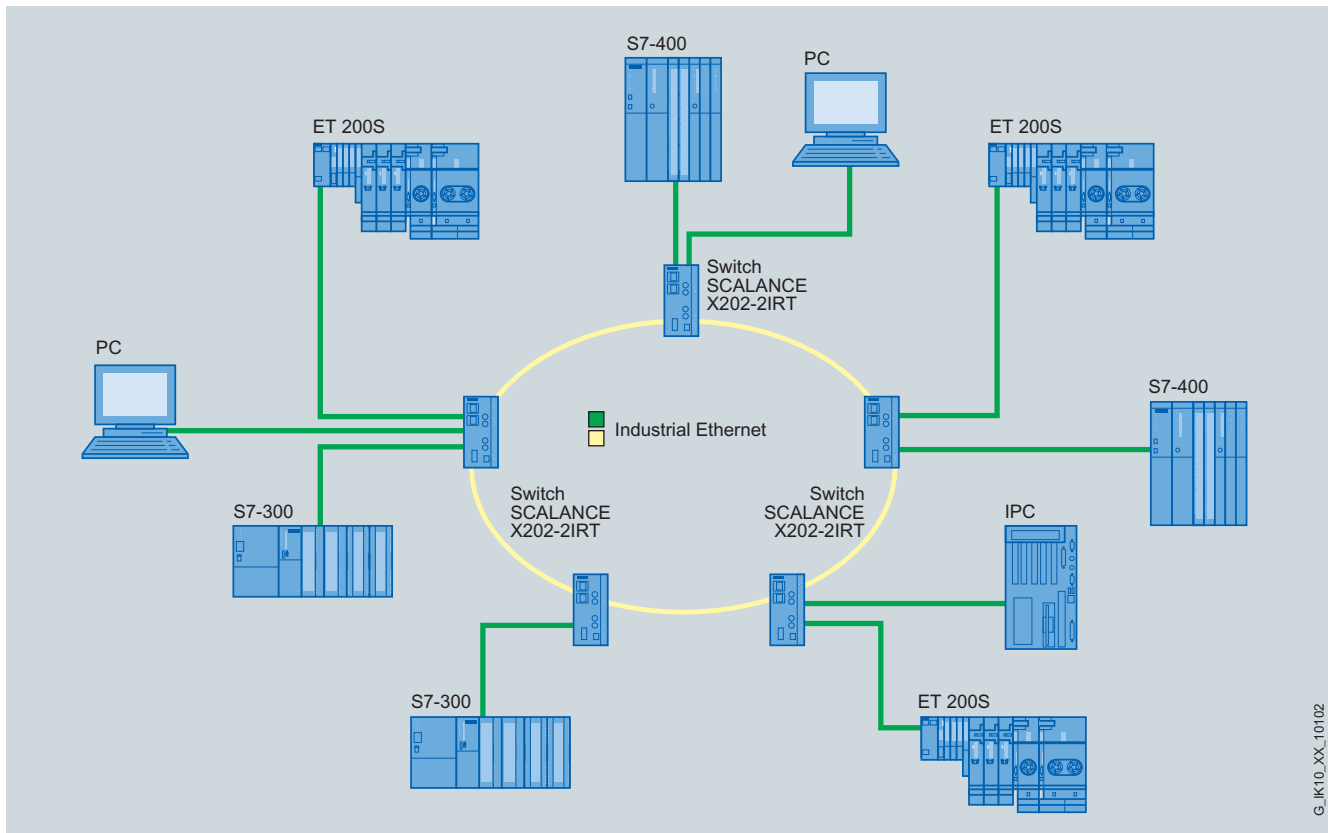
The SCALANCE X-200IRT Industrial Ethernet Switches are usually installed in the control cabinet together with the stations to be connected (e.g. ET 200S) or, in the case of cabinet-free designs, mounted directly onto the machine. When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE X switches:
  - Max. 100 m with IE FC cable and IE FC RJ45 Plug 180 or IE FC RJ45 Plug PRO
  - Max. 10 m with TP Cord
- Length of the optical cables
  - Max. 4000 m with Industrial Ethernet glass fiber-optic cables (62.5/125 μm)
  - Max. 5000 m with Industrial Ethernet glass fiber-optic cables (50/125 μm)
  - Max. 100 m with Industrial Ethernet PCF fiber-optic cables.
  - Max. 50 m with Industrial Ethernet POF fiber-optic cables.
- IP Address:
  The IP address is assigned by means of the DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using the supplied software tool PST (Primary Setup Tool) or STEP 7. The SCALANCE X-200IRT switches and their real-time functions are configured with STEP 7.

Commissioning and diagnosis

PROFINET diagnostic alarms from SCALANCE X-200IRT Switches can be displayed with the appropriate SIMATIC Engineering Tools and processed in the control unit. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.


The SCALANCE X-200IRT Industrial Ethernet switches can also be integrated into a network management system through the standardized protocol SNMP (Simple Network Management Protocol). In the event of a device fault, error messages (SNMP traps) can be sent to a network system or as e-mail to a specified network manager.

The integral Web server enables configuration and diagnosis settings to be made using a standard browser. Statistical information can also be read out over the Web server. Warning thresholds, and alarms generated by them, permit early recognition of critical fiber states (only with POF). Cable failures (fiber breakage) can thus be avoided, and plant downtimes reduced, since maintenance work can be carried out at an early point in time and outside production periods.


The following information is displayed on site by LEDs:

- Power
- Port status
- Data traffic
- RM activated
- POF cable diagnostics

The Industrial Ethernet switches of the SCALANCE X-200IRT line can also be monitored using the floating signaling contact.

Configuration example for SCALANCE X204IRT

Function (continued)

Configuration with high-speed redundancy in the optical ring

PROFINET/Industrial Ethernet

■ **Technical specifications** (continued)

Order No.	6GK5 202-2BB00-2BA3	6GK5 204-0BA00-2BA3
Product type designation	**SCALANCE X202-2IRT**	**SCALANCE X204IRT**
Transmission rate		
Transmission rate 1	10 Mbit/s	10 Mbit/s
Transmission rate 2	100 Mbit/s	100 Mbit/s
Interfaces		
Number of electrical/optical connections		
• for network components or terminal equipment, maximum	4	4
• as combo port for network components or terminal equipment	-	-
Number of electrical connections		
• for network components or terminal equipment	2	4
• for signaling contact	1	1
• for power supply	1	1
• For redundant power supply	1	1
Design of electrical/optical connections for network components or terminal equipment		
Design of electrical connection		
• for network components or terminal equipment	RJ45 port	RJ45 port
• for signaling contact	2-pin terminal block	2-pin terminal block
• for power supply	4-pin terminal block	4-pin terminal block
Number of optical connections for fiber-optic cables at 100 Mbit/s	2	-
Design of optical connection for fiber-optic cables at 100 Mbit/s	BFOC port (multimode up to 5 km)	-
Injectable optical power relative to 1 mW		
• of the transmitter output	-19 ... -14 dB	-
• of the receiver input, maximum	-	-
Optical sensitivity referred to 1 mW of receiver input, minimum	-34 dB	-
Minimum required damping factor of FO transmission link	0 dB	-
The range at the optical interface depends on the type of optical fiber used	0 … 0.05 km	-
Design of swap medium C-Plug	Yes	Yes
Inputs/outputs		
Operating voltage of signaling contacts with DC rated value	24 V	24 V
Operating current of signaling contacts with DC, maximum	0.1 A	0.1 A
Supply voltage, current consumption, power loss		
Type of power supply	DC	DC
External power supply	24 V	24 V
• Minimum	18 V	18 V
• Maximum	32 V	32 V
Product component: fusing at power supply input	Yes	Yes
Type of fusing of power supply input	0.6 A / 60 V	0.6 A / 60 V
Current consumed, maximum	0.3 A	0.2 A
Effective power loss at 24 V with DC	6 W	4.8 W

Industrial Ethernet Switches SCALANCE X-200IRT

Managed Industrial Ethernet switches;
Isochronous Real-Time,
LED diagnostics,
fault signaling contact with SET button,
redundant power supply;
incl. operating instructions,
Industrial Ethernet network manual and configuration software on CD-ROM

• **SCALANCE X204IRT;** 4 x 10/100 Mbit/s RJ45 ports	6GK5 204-0BA00-2BA3
• **SCALANCE X204IRT PRO;** 4 x 10/100 Mbit/s RJ45 push-pull ports	6GK5 204-0JA00-2BA6
• **SCALANCE X202-2IRT;** 2 x 10/100 Mbit/s RJ45 ports, 2 x 100 Mbit/s Multimode BFOC ports	6GK5 202-2BB00-2BA3
• **SCALANCE X202-2P IRT;** 2 x 10/100 Mbit/s RJ45 ports, 2 x 100 Mbit/s POF/PCF SC RJ ports	6GK5 202-2BH00-2BA3
• **SCALANCE X202-2P IRT PRO;** 2 x 10/100 Mbit/s RJ45 push-pull ports, 2 x 100 Mbit/s POF/PCF SC RJ push-pull ports	6GK5 202-2JR00-2BA6
• **SCALANCE X201-3P IRT;** 1 x 10/100 Mbit/s RJ45 port, 3 x 100 Mbit/s POF/PCF SC RJ ports	6GK5 201-3BH00-2BA3
• **SCALANCE X201-3P IRT;** 1 x 10/100 Mbit/s RJ45 port, 3 x 100 Mbit/s POF/PCF SC RJ ports	6GK5 201-3JR00-2BA6
• **SCALANCE X200-4P IRT;** 4 x 100 Mbit/s POF/PCF SC RJ	6GK5 200-4AH00-2BA3

Accessories

Industrial Ethernet media converter SCALANCE X-100

Industrial Ethernet media converters, LED diagnostics, fault signaling contact with SET key, redundant power supply, PROFINET-compliant securing collars

• **SCALANCE X101-1POF;** 1 X 10/100 Mbit/s RJ45 port, 1 X 100 Mbit/s POF SC RJ port	6GK5 101-1BH00-2AA3
IE FC TP Standard Cable GP 2 x 2 (Type A)	6XV1 840-2AH10
4-core, shielded TP installation cable for connection to IE FC Outlet RJ45 / IE FC RJ45 Plug; PROFINET-compliant; with UL approval; <u>sold by the meter;</u> max. length 1000 m, minimum order 20 m	
FO Standard Cable GP 50/125/1400 [1) 2)]	6XV1 873-2A
Multimode cable, <u>sold by the meter;</u> max. length 1000 m; minimum order 20 m;	
POF Standard Cable GP 980/1000	6XV1 874-2A
POF standard cable for fixed routing indoors with PVC sheath; <u>sold by the meter;</u> max. length 1000 m; minimum order 20 m	
PCF Standard Cable GP 200/230	6XV1 861-2A
Standard cable, segmentable, <u>sold by the meter;</u> max. length 2000 m; minimum order 20 m;	

[1)] Special fiber-optic cables, lengths and accessories available on request

[2)] Special tools and trained personnel are required for pre-assembling glass fiber-optic cables

Ordering data	**Order No.**
Accessories (continued)	
IE FC RJ45 Plug 180 2 x 2	
RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; with 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface	
• 1 pack = 1 unit	**6GK1 901-1BB10-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB10-2AB0**
• 1 pack = 50 units	**6GK1 901-1BB10-2AE0**
IE FC RJ45 Plug PRO	**6GK1 901-1BB20-6AA0**
FastConnect RJ45 plug connector; plastic housing, insulation displacement technology, for SCALANCE X-200IRT PRO switches and SIMATIC ET 200pro; 1 connector (IP65/67) suitable for on-site assembly	
SC RJ POF Plug	**6GK1 900-0MB00-0AC0**
20 plugs for on-site assembly	
SC RJ POF Plug PRO	**6GK1 900-0MB00-6AA0**
1 plug (IP65/67) for on-site assembly	
SC RJ PCF Plug	**6GK1 900-0NB00-0AC0**
10 plugs for on-site assembly	
SC RJ PCF Plug PRO	**6GK1 900-0NB00-6AA0**
1 plug (IP65/67) for on-site assembly	
Termination Kit SC RJ POF Plug	**6GK1 900-0ML00-0AA0**
Assembly case for on-site installation of SC RJ POF connectors; consisting of stripping tool, Kevlar cutters, SC RJ grinding plate, grinding paper, grinding base and microscope	
Termination Kit SC RJ PCF Plug	**6GK1 900-0NL00-0AA0**
Assembly case for local assembly of SC RJ PCF connectors, comprising a stripping tool, buffer stripping tool, Kevlar cutters, fiber breaking tool and microscope	
Power Plug PRO	**6GK1 907-0AB10-6AA0**
1 plug (IP65/67) for on-site assembly (5-core)	
SITOP compact 24 V/ 0.6 A	**6EP1 331-5BA00**
1-phase power supply with wide-range input 85 – 264 V AC/110 – 300 V DC, stabilized output voltage 24 V, rated output current value 0.6 A, slim design	
C-PLUG	**6GK1 900-0AB00**
Swap medium for simple replacement of devices in the event of a fault; for storing configuration or engineering and application data; can be used for SIMATIC NET products with C-PLUG slot

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SIPLUS SCALANCE X-200IRT managed

■ Overview

2

- Especially designed for constructing real-time (RT) and isochronous real-time (IRT) Industrial Ethernet networks in line, star and ring topologies with 10/100 Mbit/s (integrated redundancy manager); construction of redundant ring connections possible
- Combination of the switching mechanisms "Cut Through" and "Store and Forward" for optimized performance
- Electrical or optical connection to stations or network according to the device port type
- Rugged metal enclosure for space-saving cubicle mounting on standard rails, S7-300 mounting rails, or for wall mounting
- Rugged, industry-standard station connections with PROFINET-compatible plug-in connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Redundant power supply
- Can be used for fault-tolerant applications and can be replaced during normal operation thanks to redundant transmission characteristics
- Diagnostics on the device by means of LEDs (power, link status, data communication)
- Error signaling contact with easy adjustment using the SET button
- The devices feature PROFINET diagnostics, SNMP access, integral web server and automatic e-mail sending function for remote diagnostics and signaling over the network
- Different device versions with copper and fiber-optic interfaces (BFOC, SC RJ)
- Device versions with IP65/67 protection for cabinet-free plant concepts with PROFINET-compliant push pull connection systems

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

	SIPLUS SCALANCE X202-2P IRT
Order number	6AG1 202-2BH00-2BA3
Order No. based on	6GK5 202-2BH00-2BA3
Ambient temperature range	-25 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions.

Ambient conditions

Relative humidity	5 ... 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range 795 ... 658 hPa (+2000 ... +3500 m) derating 10 K 658 ... 540 hPa (+3500 ... +5000 m) derating 20 K

[1] ISA-S71.04 severity level GX: Long-term load: $SO_2 < 4.8$ ppm; $H_2S < 9.9$ ppm; $Cl < 0.2$ ppm; $HCl < 0.66$ ppm; $HF < 0.12$ ppm; $NH < 49$ ppm; $O_3 < 0.1$ ppm; $NOX < 5.2$ ppm
Limit value (max. 30 min/d): $SO_2 < 17.8$ ppm; $H_2S < 49.7$ ppm; $Cl < 1.0$ ppm; $HCl < 3.3$ ppm; $HF < 2.4$ ppm; $NH < 247$ ppm; $O_3 < 1.0$ ppm; $NOX < 10.4$ ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

SIPLUS SCALANCE X202-2 IRT; (extended temperature range) 2 x 10/100 Mbit/s RJ45 ports, 2 x 100 Mbit/s POF/PCF SC RJ ports	**6AG1 202-2BH00-2BA3**
Accessories	See ordering data for SCALANCE X-200IRT managed

Overview

The SCALANCE XF204IRT Industrial Ethernet switch is suitable for the construction of deterministic and isochronous real-time Industrial Ethernet networks, at data transfer rates of 10/100 Mbit/s, in line, star, and ring topologies.

- Connection of up to four terminal units possible
- Enclosure in ET 200S format (slim design, 75 mm width) for space-saving use in small control boxes
- Integrated redundancy manager for constructing Fast Ethernet ring topologies with fast media redundancy
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network

Benefits

- Optimized startup behavior (link setup, data forwarding) of PROFINET network components and IO Devices through fast start-up functionality
- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 ports
- Simple connection and disconnection of the RJ45 plug by means of easily accessible RJ45 sockets angled downward on the device
- High network availability in ring topologies, without reconfiguration times, when using the PROFINET-compliant MRPD process (**M**edia **R**edundancy for **P**lanned **D**uplication according to IEC 61158)
- Protection of investment through integration into existing network management systems, such as SINEMA Server, by means of standardized SNMP access
- Time savings during engineering, commissioning and in the operating phase of a plant by using the configuration and diagnostics integrated in STEP 7

Application

The SCALANCE XF204IRT Industrial Ethernet switch permits the construction of isochronous real-time (IRT) Industrial Ethernet line and star topologies. Thanks to innovative switching technology, the special requirements of automation with regard to line topology, isochronous mode for motion control applications, and unlimited IT openness are satisfied within a single technology based on the PROFINET standard.

Product versions

SCALANCE XF204IRT

- For setting up electrical Industrial Ethernet line, star or ring topologies with four electrical ports (ET 200S design)

Characteristics:

- Diagnostics on the device by means of LEDs (power, link status, data traffic)
- Remote diagnostics is possible through signaling contact (signal mask can be set locally using buttons), PROFINET, SNMP, and web browser
- Automatic e-mail sending function
- The RJ45 sockets are designed to be industry-compatible with additional sleeves, for connection of the IE FC RJ45 Plug 180

Real-Time Ethernet

- Interfacing of the PROFINET IO Devices to the PROFINET IO Controller through high-performance, optimized data transmission
- Coexistence of isochronous mode for motion control applications and IT openness:
  Reaction-free transmission of real-time and non-real-time communication on the same line

Additionally through isochronous real-time (IRT) Ethernet

- Isochronous real-time communication based on the transmission procedure of the IEEE 802 standard by combining the switching mechanisms "Cut Through" and "Store and Forward"
- For drive controls, PROFINET with isochronous real-time is the most powerful system worldwide with regard to determinism and isochronous mode.
  For example, with a cycle time of 1 ms, axes can be controlled in isochronous mode while 50% of the bandwidth is available at the same time for IT communication without restriction.

2

SCALANCE XF-200IRT managed

■ Design

The SCALANCE XF-204IRT managed Industrial Ethernet switch is designed for mounting on a standard mounting rail. With its enclosure in ET 200S format (slim design), the device is optimally suited for integration in automation solutions in small control boxes together with the ET 200S.

The switch with degree of protection IP30 features:

- 2 x 2-pole terminal block for connecting the redundant supply voltage (2 x 24 V DC)
- A row of LEDs to indicate the status information (power, link status, data traffic, power supply, signaling contact)
- A 2-pole terminal block for connecting the isolated signaling contact
- A SET button for on-site configuration of the signaling contact

The SCALANCE XF204IRT switch is available with the following port types:

- *10/100BaseTX, RJ45 connection;*
  RJ45 socket, automatic detection of the data rate (10 or 100 Mbit/s), with Autosensing and Autocrossover functions for connecting IE FC cables using the IE FC RJ45 Plug 180.

■ Function

- Configuration of electrical Industrial Ethernet line, star and ring topologies
- Integral redundancy manager for setting up ring topologies
- Integral standby function for redundant coupling of two rings
- Extremely short cycle times with highly accurate clock-pulse rates thanks to integrated real-time functions
- Bumpless ring redundancy by sending message frames twice in the ring, by means of PROFINET-compliant MRPD procedure (**M**edia **R**edundancy for **P**lanned **D**uplication according to IEC 61158)
- System-wide clock accuracy (deviation less than 1 ms)
- Uncrossed connecting cables can be used due to Autocrossover function integrated in the ports
- Easy diagnostics using signaling contact, SNMP and Web browser
- Integration into the diagnostics of a PROFINET IO Controller by means of real-time communication (RT) according to the PROFINET standard
- Fast device replacement in the event of a fault by using the optional C-PLUG swap medium (not included in scope of supply)

Network topology and network configuration

The SCALANCE XF204IRT Industrial Ethernet switch with IP30 degree of protection is installed in a control cabinet together with the stations to be connected. It can be combined electrically in star, line and ring topologies.

When configuring the network, it is necessary to observe the following boundary conditions:

- Length of the TP cable between two SCALANCE XF switches:
  - Max. 100 m with IE FC cable and IE FC RJ45 Plug 180
- IP Address:
  The IP address is assigned using the DHCP (Dynamic Host Configuration Protocol) mechanism. If there is no corresponding server in the network, the IP address can be assigned using the supplied software tool PST (Primary Setup Tool) or STEP 7. The device and real-time configuration of the SCALANCE XF204IRT switch is performed via STEP 7.

SCALANCE XF204IRT with ET 200S and SIMATIC Microbox in compact control cabinets or boxes

Commissioning and diagnosis

PROFINET diagnostic interrupts from SCALANCE XF204IRT can be displayed with the appropriate SIMATIC Engineering Tools and processed in the controller with expanded diagnostics function. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

The SCALANCE XF204IRT Industrial Ethernet switch can also be integrated into a network management system, e.g. SINEMA Server, through the standardized Simple Network Management Protocol (SNMP). In the event of a fault in the device, error messages (SNMP traps) can be sent to a network system or as e-mail to a specified network administrator.

The integral Web server enables configuration and diagnostics settings to be made using a standard browser (e.g. port configuration). Statistical information can also be read out over the Web server (e.g. port capacity utilization).

The following information is displayed by LEDs on site:
- Power
- Port status
- Data traffic
- Signaling contact
- Redundancy manager function

SCALANCE X-300 managed

Overview

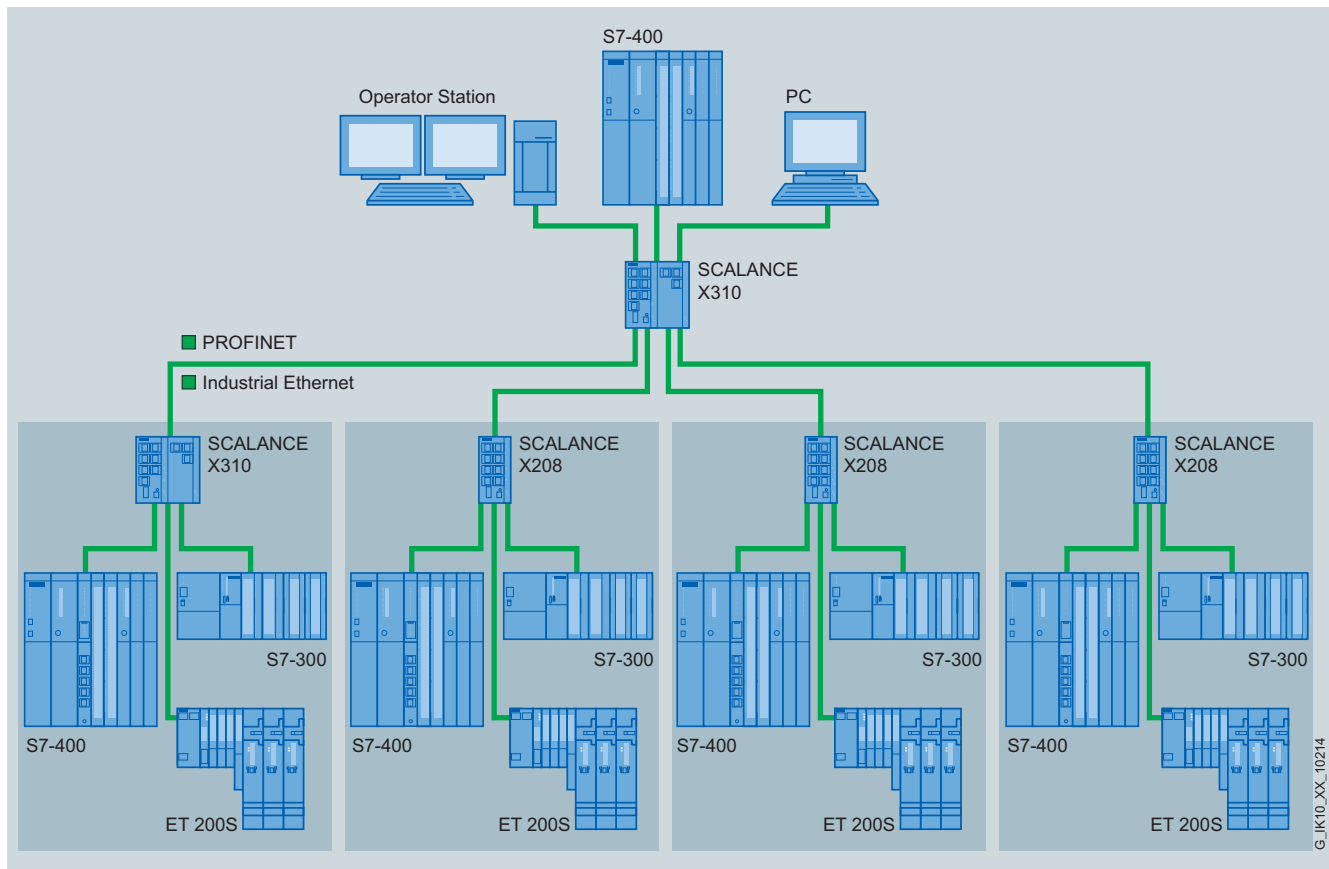
The SCALANCE X-300 product line comprises compact Industrial Ethernet switches for constructing electrical and/or optical line, star and ring topologies operating at data transfer rates of 10/100/1000 Mbit/s.

- SCALANCE X-300 is available
  - with integrated electrical and optical Ethernet ports
  - as a partially modular version with four integrated electrical Ethernet ports and two modular slots for 2-port media modules
- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet (SCALANCE X-300, X-400) and Fast Ethernet (e.g. in combination with SCALANCE X-200 switches)
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standards: Establishment of virtual networks (VLANs)
- Redundant integration into higher-level networks thanks to support for standardized redundancy procedures (Rapid Spanning Tree Protocol)
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network

Benefits

get Designed for Industry

- High availability of the network thanks to:
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager, standby function, and RSTP are integrated)
  - Easy device replacement by means of plug-in C-PLUG swap medium
  - Very fast reconfiguration of the network in the event of a fault
- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 ports
- Protection of investment due to integration into existing network management systems by means of standardized SNMP access
- Time savings during engineering, commissioning and in the operating phase of a plant by using the configuration and diagnostics integrated in STEP 7
- Simple adaptation to different network topologies, and reduction in stock keeping costs through flexibility of the partially modular versions

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters


2

Application

SCALANCE X-300 products enable the establishment of switched networks both at the field level and at the control level where high data transfer rates are required in addition to high network availability and extensive diagnostics facilities. The switches are designed in degree of protection IP30 for installation in control cabinets.

The main area of application is found in high-performance plant networks with interfaces to the corporate network.

The X308-2M TS is suitable for use in railway applications due to its specification according to EN 50155.

Product versions

Switches with Fast Ethernet and Gigabit Ethernet ports

Electrical star topology with SCALANCE X310

SCALANCE X310, SCALANCE X308-2, SCALANCE X308-2LD, SCALANCE X308-2LH, SCALANCE X308-2LH+, SCALANCE X307-3, SCALANCE X307-3LD

- For configuring electrical Industrial Ethernet line, star or ring structures
  - SCALANCE X310;
    3 x 10/100/1000 Mbit/s RJ45 ports, electrical
    7 x 10/100 Mbit/s RJ45 ports, electrical
  - SCALANCE X308-2;
    1 x 10/100/1000 Mbit/s RJ45 ports, electrical
    7 x 10/100 Mbit/s RJ45 ports, electrical
   2 x 1000 Mbit/s SC ports, optical, for glass FOC (multimode) up to 750 m
  - SCALANCE X307-3;
    7 x 10/100 Mbit/s RJ45 ports, electrical
    3 x 1000 Mbit/s SC ports, optical, for glass FOC (multimode) up to 750 m
  - SCALANCE X308-2LD;
    1 x 10/100/1000 Mbit/s RJ45 ports, electrical
    7 x 10/100 Mbit/s RJ45 ports, electrical
    2 x 1000 Mbit/s SC ports, optical, for glass FOC (singlemode) up to 10 km

  - SCALANCE X307-3LD;
    7 x 10/100 Mbit/s RJ45 ports, electrical
    3 x 1000 Mbit/s SC ports, optical, for glass FOC (singlemode) up to 10 km
  - SCALANCE X308-2LH;
    1 x 10/100/1000 Mbit/s RJ45 ports, electrical
    7 x 10/100 Mbit/s RJ45 ports, electrical
    2 x 1000 Mbit/s SC ports, optical, for glass FOC (singlemode) up to 40 km
  - SCALANCE X308-2LH+;
    1 x 10/100/1000 Mbit/s RJ45 ports, electrical
    7 x 10/100 Mbit/s RJ45 ports, electrical
    2 x 1000 Mbit/s SC ports, optical, for glass FOC (singlemode) up to 70 km
- The RJ45 ports are designed to be industry-standard with additional holding collars for connection of the IE FC RJ45 Plug 180

SCALANCE X-300 managed

Application (continued)

- PROFINET/Industrial Ethernet (Twisted Pair)
- PROFINET/Industrial Ethernet (Fiber Optic)

Connection of control cabinets with SCALANCE X308-2 in an optical gigabit ring

Fast Ethernet switches

SCALANCE X310FE
SCALANCE X304-2FE
SCALANCE X306-1LD FE
*SCALANCE X320-1FE*
SCALANCE X320-3 LD FE

- For configuring electrical and/or optical Industrial Ethernet line, star or ring structures
  - SCALANCE X310FE;
    10 x 10/100 Mbit/s RJ45 ports, electrical
  - SCALANCE X304-2FE;
    4 x 10/100 Mbit/s RJ45 ports, electrical
    2 x 100 Mbit/s SC ports, optical, for glass FOC (multimode) up to 5 km
  - SCALANCE X306-1LD FE;
    6 x 10/100 Mbit/s RJ45 ports, electrical
    1 x 100 Mbit/s SC port, optical, for glass FOC (singlemode) up to 26 km
  - SCALANCE X320-1FE;
    20 x 10/100 Mbit/s RJ45 ports, electrical
    1 x 100 Mbit/s SC port, optical, for glass FOC (multimode) up to 5 km
  - SCALANCE X320-3LD FE;
    20 x 10/100 Mbit/s RJ45 ports, electrical
    1 x 100 Mbit/s SC port, optical, for glass FOC (multimode) up to 5 km
    2 x 100 Mbit/s SC ports, optical, for glass FOC (singlemode), up to 26 km
- The RJ45 ports are designed to be industry-standard with additional holding collars for connection of the IE FC RJ45 Plug 180

2

Application (continued)

Redundant ring topology with SCALANCE X for wind farms

Full Gigabit switches

SCALANCE X308-2M
SCALANCE X308-2M TS

- For setting up optical line, ring or star network structures with
  - Four integrated electrical Gigabit Ethernet ports and
  - Four modular slots for equipping with any 2-port media modules
    (see "Media modules for SCALANCE X-300")
- Star hubs in the plant bus
  (redundant connection possible)
- SCALANCE X308-2M;
  4 x 10/100/1000 Mbit/s RJ45 ports, electrical
  2 x free module slots for 4 x 10/100/1000 Mbit/s media modules (electrical or optical)
- SCALANCE X308-2M TS (TS = Transportation Systems);
  4 x 10/100/1000 Mbit/s RJ45 ports, electrical
  2 x free module slots for 4 x 10/100/1000 Mbit/s media modules (electrical or optical)
  is suitable for use in railway applications due to its specification according to EN 50155

2

Design

The SCALANCE X-300 Industrial Ethernet switches with rugged metal housing are optimized for mounting on a standard DIN rail and the S7-300 rail. Direct wall mounting in various positions is also possible. Thanks to the S7-300 housing dimensions, the devices are suitable for integration into an automation solution with S7-300 components.

The switches have:

- a 4-pin terminal block for connecting the redundant power supply (2 x 24 V DC)
- Row of LEDs for indicating the status information (power, link status, data traffic, fault, redundancy manager, standby manager)
- A 2-pin terminal block for connecting the isolated signaling contact
- SELECT/SET key for on-site configuration of the signaling contact
- Slot for optional C-PLUG swap medium on the rear of the device for easy replacement in the event of a fault

The SCALANCE X-300 switches are available with the following port types:

- *10/100BaseTX, RJ45 connection;*
  RJ45 socket, automatic detection of the data rate (10 or 100 Mbit/s), with Autosensing and Autocrossover function for the connection of IE FC cables via IE FC RJ45 Plug 180 to 100 m.

- *10/100/1000BaseTX, RJ45 connection;*
  RJ45 socket, automatic detection of the data rate (10 or 100 or 1000 Mbit/s), with Autosensing and Autocrossover function for the connection of
  - IE FC cables 2x2 for 100 Mbit/s via IE FC RJ45 Plug 180 up to 100 m
  - IE FC cables 4x2 for 1000 Mbit/s via TP Cord and IE FC RJ45 Modular Outlet up to 100 m
  - IE FC cables 4x2 for 1000 Mbit/s via IE FC RJ45 Plug 4x2 up to 100 m

- *1000BaseSX, SC connections;*
  SC ports for direct connection to the Industrial Ethernet glass fiber-optic cable up to 750 m (multimode)

- *1000BaseFX, SC connections;*
  SC ports for direct connection to the Industrial Ethernet glass fiber-optic cable up to 10 km (singlemode)

- *1000BaseLX, SC connections;*
  SC ports for direct connection to the Industrial Ethernet glass fiber-optic cable up to 40 km (singlemode)

- *1000BaseLX, SC connections;*
  SC ports for direct connection to the Industrial Ethernet glass fiber-optic cable up to 70 km (singlemode)

Function

- Increase of the network performance;
  by filtering the data traffic on the basis of the Ethernet (MAC) address of the data terminals, data traffic remains local; only data intended for users of another subnetwork are forwarded by the switch.

- Simple network configuration and expansion;
  the switch saves the data received at the ports and forwards them independently to the destination address. Collision detection (CSMA/CD method) does not restrict the expansion of the network beyond the port.

- Limiting of error spreading to the associated subnetwork;
  the SCALANCE X-300 switches only pass on data with a valid checksum (CRC).

- Integration of existing subnetworks with 10 Mbit/s into Fast Ethernet networks with 100 Mbit/s;
  at the twisted-pair ports, the SCALANCE X-300 switch automatically recognizes the conductor pairs for transmission and reception (Autocrossover), the data transfer rate of 10 or 100 or 1000 Mbit/s, as well as full-duplex and half-duplex mode (Autonegotiation).

- High-performance connection of SCALANCE X-300 switches with 1 Gbit/s;
  SCALANCE X-300 switches have Gigabit Ethernet ports for connecting the switches to each other or with other Gigabit-Ethernet-enabled components (e.g. SCALANCE X-400, X-500)

- Integrated redundancy manager for constructing Fast Ethernet and Gigabit Ethernet ring topologies with high-speed media redundancy.

- High-speed standby redundancy;
  several network segments such as rings can be interconnected redundantly with SCALANCE X-300 over the integrated standby function. Two X-300 switches are configured in a ring as a master and slave over two links to the other ring. The redundant connection can be made at 1000 Mbit/s.

- Redundant interfacing to higher-level networks;
  SCALANCE X-300 switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher-level network with reduced requirements for the reconfiguration time (in the order of seconds).

- Support of virtual networks (VLAN);
  for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.

- Load limiting when multicast protocols (e.g. video transmission) are used;
  through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE X-300 switches can also filter multicast data traffic and therefore limit the load in the network.

- Configuration of the ports for terminals that support authentication in accordance to IEEE 802.1x. Authentication is done via a RADIUS server which has to be configured accordingly and must be able to be reached via the network.

- Support of the DHCP Option 82, 66, 67 (Dynamic Host Configuration Protocol);
  this facilitates the IP address assignment of a terminal depending on the connected switch port. The IP address is assigned via a DHCP Server, which has to be configured accordingly and must be able to be reached via the network.

2

■ **Function** (continued)

- Support from the Access Control List (ACL);
  if this function is activated for one port, the switch forwards the message frames received to this port if its source address is present in the address table. All connected nodes can be automatically entered in the ACL.
- Syslog;
  Syslog according to RFC 3164 is used in the IP network for transmitting short, unencrypted text messages via UDP. This requires the use of a Syslog server that must be configured appropriately and must be accessible via the network.
- Time synchronization;
  diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK or SNTP time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.
- Fast replacement of devices in event of failure, by means of the C-PLUG switching medium

Network topology and network configuration

The SCALANCE X-300 Industrial Ethernet switches with degree of protection IP30 are typically accommodated in a control cabinet along with the nodes to be connected. The can be mixed electrically and optically in star, line and ring topologies.

The following network structures and combinations of structures can be implemented:

- Fast Ethernet and Gigabit Ethernet rings with fast media redundancy;
  to increase network availability, as many as 50 X-200, X-300, X-400 or X-500 switches can be cascaded in line can be connected into a ring
- Several rings can be redundantly linked through the standby function
- In addition, SCALANCE X-300 supports redundant connection of the ring structure to the corporate network with a rapid spanning tree.
- Star topology with SCALANCE X-300 switches:
  The SCALANCE X-300 switch represents a star point which can interconnect several nodes or subnets electrically or optically.

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 750 m at 1 Gbit/s
  - 5 km at 100 Mbit/s
- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 10 to 70 km at 1 Gbit/s
  - 26 km at 100 Mbit/s
- Maximum cable length of the TP cable between two SCALANCE X switches:
  - Max. 100 m with IE FC cable 2x2 and IE FC RJ45 Plug 180
  - Max. 100 m at 1 Gbit/s with IE FC Standard Cable 4x2 (90 m), IE FC RJ45 Modular Outlet and patch cable (10 m)
  - Max. 10 m using patches with TP cord

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE X-300 is switched to RM mode. The Gigabit ports (electrical or optical) are preferably used as ring ports.
- Signal mask;
  the signal mask is set to the current status of the SCALANCE X-300 (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).
- IP address;
  the IP address is assigned via DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using an enclosed software tool.

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100/1000 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode
- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.
- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Remote via standard browser (Web-based management):
    Selection of SCALANCE X-300 switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3:
    Secure integration of SCALANCE X-300 switches via the network into a network management system, e.g. SINEMA Server
  - Remote via PROFINET IO diagnostics:
    PROFINET diagnostic alarms from SCALANCE X-300 switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

Function (continued)

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Fixed parameterization of the ports (data rates, half/full duplex)
- Setting parameters of the VLANs and multicast services
- Parameterization of the standby connections for a redundant ring link
- Setting of Rapid Spanning Tree parameters
- Parameterization of the web management services
- Security
  - Ports can be connected or disconnected
  - Authentication in accordance with IEEE 802.1x
  - Support from Access Control List (ACL)
- Parameterization of user administration of SNMP V1, V2c, V3
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware versions or of the configuration data via the network by a TFTP server or directly via HTTP/HTTPS using a Web browser
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE X-300 switch can independently send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE X-300 switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

Product type designation	SCALANCE X308-2	SCALANCE X308-2LD	SCALANCE X308-2LH	SCALANCE X308-2LH+
Supply voltage, current consumption, power loss				
Redundant type of power supply	No	No	No	No
Type of power supply	DC	DC	DC	DC
Supply voltage, external	24 V	24 V	24 V	24 V
• Minimum	18 V	18 V	18 V	18 V
• Maximum	32 V	32 V	32 V	32 V
Product component: fusing of power supply input	Yes	Yes	Yes	Yes
Type of fusing of power supply input	F 3 A / 32 V	F 3 A / 32 V	F 3 A / 32 V	F 3 A / 32 V
Current consumption, maximum	0.4 A	0.4 A	0.4 A	0.4 A
Effective power loss				
• at 24 V DC	9.6 W	9.6 W	9.6 W	9.6 W
• at 230 V AC	-	-	-	-
Permissible ambient conditions				
Ambient temperature				
• During operation	-10 … +60 °C	-40 … +60 °C	-40 … +60 °C	-40 … +60 °C
• During storage	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C
• During transport	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C	-40 … +70 °C
• Note	-	-	-	-
Relative humidity at 25 °C without condensation during operation, maximum	95 %	95 %	95 %	95 %
Ambient condition for operation	-	-	-	-
IP degree of protection	IP30	IP30	IP30	IP30
Design, dimensions and weights				
Type of construction	Compact	Compact	Compact	Compact
Width	120 mm	120 mm	120 mm	120 mm
Height	125 mm	125 mm	125 mm	125 mm
Depth	123 mm	123 mm	123 mm	123 mm
Net weight	1.4 kg	1.4 kg	1.4 kg	1.4 kg
Type of mounting				
• 19-inch installation	No	No	No	No
• 35 mm DIN rail mounting	Yes	Yes	Yes	Yes
• Wall mounting	Yes	Yes	Yes	Yes
• S7-300 rail mounting	Yes	Yes	Yes	Yes
Type of mounting	In marine applications, mounting on the 35 mm DIN rail is not permissible	In marine applications, mounting on the 35 mm DIN rail is not permissible	In marine applications, mounting on the 35 mm DIN rail is not permissible	In marine applications, mounting on the 35 mm DIN rail is not permissible
Product properties, functions, components General				
Cascading with redundant ring with reconfiguration time < 0.3 s	50	50	50	50
Cascading with star topology	Any (only dependent on signal propagation time)	Any (only dependent on signal propagation time)	Any (only dependent on signal propagation time)	Any (only dependent on signal propagation time)

Product type designation	**SCALANCE X310FE**	**SCALANCE X310**	**SCALANCE X320-1FE**	**SCALANCE X320-3LD FE**
Product properties, functions, components General				
Cascading with redundant ring with reconfiguration time < 0.3 s	50	50	50	50
Cascading with star topology	Any (only dependent on signal propagation time)	Any (only dependent on signal propagation time)	Any (only dependent on signal propagation time)	Any (only dependent on signal propagation time)
Product functions Management, configuration, programming				
Product function				
• CLI	Yes	Yes	Yes	Yes
• Web-based management	Yes	Yes	Yes	Yes
• MIB support	Yes	Yes	Yes	Yes
• TRAPS via e-mail	Yes	Yes	Yes	Yes
• Configuration with STEP 7	Yes	Yes	Yes	Yes
• RMON	Yes	Yes	Yes	Yes
• SMTP server	Yes	Yes	Yes	Yes
• Port mirroring	Yes	Yes	Yes	Yes
• CoS	Yes	Yes	Yes	Yes
• with IRT PROFINET IO Switch	-	-	-	-
• PROFINET IO diagnostics	Yes	Yes	Yes	Yes
• Switch-managed	Yes	Yes	Yes	Yes
Protocol is supported				
• Telnet	Yes	Yes	Yes	Yes
• HTTP	Yes	Yes	Yes	Yes
• HTTPS	Yes	Yes	Yes	Yes
• TFTP	Yes	Yes	Yes	Yes
• FTP	Yes	Yes	Yes	Yes
• BOOTP	Yes	Yes	Yes	Yes
• SNMP v1	Yes	Yes	Yes	Yes
• SNMP v2	Yes	Yes	Yes	Yes
• SNMP v3	Yes	Yes	Yes	Yes
• IGMP (snooping/querier)	Yes	Yes	Yes	Yes
• GMRP	Yes	Yes	Yes	Yes
• DCP	Yes	Yes	Yes	Yes
• LLDP	Yes	Yes	Yes	Yes
Identification & Maintenance				
• I&M0 - device-specific information	Yes	Yes	Yes	Yes
• I&M1 - higher-level designation/ location designation	Yes	Yes	Yes	Yes
Product functions Diagnostics				
Product function				
• Port diagnostics	Yes	Yes	Yes	Yes
• Packet size statistics	Yes	Yes	Yes	Yes
• Packet type statistics	Yes	Yes	Yes	Yes
• Error statistics	Yes	Yes	Yes	Yes
• SysLog	Yes	Yes	Yes	Yes
Product functions VLAN				
Product function				
• VLAN - port-based	Yes	Yes	Yes	Yes
• VLAN - dynamic	Yes	Yes	Yes	Yes
Maximum number of VLANs	255	255	255	255
Maximum number of dynamic VLANs	255	255	255	255
GVRP protocol is supported	Yes	Yes	Yes	Yes

Product type designation	**SCALANCE X308-2M**	**SCALANCE X308-2M TS**
Transmission rate		
Transmission rate 1	10 Mbit/s	10 Mbit/s
Transmission rate 2	100 Mbit/s	100 Mbit/s
Transmission rate 3	1 000 Mbit/s	1 000 Mbit/s
Interfaces		
Maximum number of electrical/ optical connections for network components or terminal equipment	8	8
Number of electrical connections		
• For network components or terminal equipment	4	4
• For operation panel	-	-
• For signaling contact	1	1
• For media module	2	2
• For power supply	1	1
• For redundant power supply	1	1
Design of electrical connection		
• For network components or terminal equipment	RJ45 port	RJ45 port
• For operation panel	-	-
• For signaling contact	2-pin terminal block	2-pin terminal block
• For power supply	4-pin terminal block	4-pin terminal block
Number of optical connections for fiber-optic cables		
• At 100 Mbit/s	-	-
• at 1000 Mbit/s	-	-
Design of optical connection for fiber-optic cables		
• At 100 Mbit/s	Depends on selected media modules	Depends on selected media modules
• At 1000 Mbit/s	Depends on selected media modules	Depends on selected media modules
Injectable optical power referred to 1 mW		
• of the transmitter output	-	-
• of the receiver input, maximum	-	-
Minimum optical sensitivity referred to 1 mW of the receiver input	-	-
Minimum required attenuation factor of the FO transmission link	-	-
The range at the optical interface depends on the type of optical fiber used	-	-
Design of the swap medium C-Plug	Yes	Yes

■ **Technical specifications** (continued)

Order No.	6GK5 308-2GG00-2AA2	6GK5 308-2GG00-2CA2
Product type designation	**SCALANCE X308-2M**	**SCALANCE X308-2M TS**
Inputs/outputs		
Operating voltage of signaling contacts with DC rated value	24 V	24 V
Maximum operating current of signaling contacts with DC	0.1 A	0.1 A
Supply voltage, current consumption, power loss		
Redundant type of power supply	No	No
Type of power supply	DC	DC
Supply voltage, external	24 V	12 V ... 24 V
• Minimum	18 V	20 V
• Maximum	32 V	30 V
Product component: fusing of power supply input	Yes	Yes
Type of fusing of power supply input	F 3 A / 32 V	F 3 A / 32 V
Current consumption, maximum	0.7 A	0.7 A
Effective power loss		
• At 24 V DC	16.6 W	16.6 W (at DC 12 V)
• At 230 V AC	-	-
Permitted ambient conditions		
Ambient temperature		
• During operation	-40 … +70 °C	-40 … +70 °C
• During storage	-40 … +70 °C	-40 … +70 °C
• During transport	-40 … +70 °C	-40 … +70 °C
• Note	Reduced operating temperature as result of use of media modules (-40 to +70 °C) or SFP plug-in transceivers (-40 to +60 °C). With vertical installation, the maximum operating temperature is reduced to +50 °C	Reduced operating temperature as result of use of media modules (-40 to +70 °C) or SFP plug-in transceivers (-40 to +60 °C). With vertical installation, the maximum operating temperature is reduced to +50 °C
Relative humidity at 25 °C without condensation during operation, maximum	95 %	95 %
Ambient condition for operation	-	-
IP degree of protection	IP20	IP20
Design, dimensions and weights		
Type of construction	Compact	Compact
Width	120 mm	120 mm
Height	125 mm	125 mm
Depth	124 mm	124 mm
Net weight	1.4 kg	1.4 kg
Type of mounting		
• 19-inch installation	No	No
• 35 mm DIN rail mounting	Yes	Yes
• Wall mounting	Yes	Yes
• S7-300 rail mounting	Yes	Yes
Type of mounting	In marine applications, mounting on the 35 mm DIN rail is not permissible.	In marine applications, mounting on the 35 mm DIN rail is not permissible.

SCALANCE X-300 Industrial Ethernet switches

Industrial Ethernet switches for setting up electrical and/or optical Industrial Ethernet networks; integrated redundancy manager, IT functions (RSTP, VLAN, etc.), network management via SNMP and web server; incl. operating instructions, Industrial Ethernet network manual and configuration software on CD-ROM; C-PLUG included in the scope of supply

- **SCALANCE X310**;
  3 x 10/100/1000 Mbit/s RJ45 ports, electrical
  7 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 310-0FA00-2AA3

- **SCALANCE X308-2**;
  2 x 1000 Mbit/s SC ports, optical (multimode, glass), up to 750 m
  1 x 10/100/1000 Mbit/s RJ45 port, electrical
  7 x 10/100 Mbit/s RJ45 ports, electrical;
  6GK5 308-2FL00-2AA3

- **SCALANCE X308-2LD**;
  2 x 1000 Mbit/s SC ports, optical (single-mode, glass), up to 10 km
  1 x 10/100/1000 Mbit/s RJ45 port, electrical,
  7 x 10/100 Mbit/s RJ45 ports, electrical;
  6GK5 308-2FM00-2AA3

- **SCALANCE X308-2LH**;
  2 x 1000 Mbit/s SC ports, optical (single-mode, glass), up to 40 km
  1 x 10/100/1000 Mbit/s RJ45 port, electrical,
  7 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 308-2FN00-2AA3

- **SCALANCE X308-2LH+**;
  2 x 1000 Mbit/s SC ports, optical (single-mode, glass), up to 70 km
  1 x 10/100/1000 Mbit/s RJ45 port, electrical,
  7 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 308-2FP00-2AA3

- **SCALANCE X307-3**;
  3 x 1000 Mbit/s SC ports, optical (multi-mode, glass), up to 750 m
  7 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 307-3BL00-2AA3

- **SCALANCE X307-3LD**;
  3 x 1000 Mbit/s SC ports, optical (single-mode, glass), up to 10 km
  7 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 307-3BM00-2AA3

Fast Ethernet switches

- **SCALANCE X310FE**;
  10 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 310-0BA00-2AA3

- **SCALANCE X304-2FE**;
  2 x 100 Mbit/s SC port, optical (singlemode, glass), up to 26 km
  4 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 304-2BD00-2AA3

- **SCALANCE X306-1LD FE**;
  1 x 100 Mbit/s SC port, optical (single-mode, glass), up to 26 km
  6 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 306-1BF00-2AA3

- **SCALANCE X320-1FE**;
  1 x 100 Mbit/s SC port, optical (multi-mode, glass), up to 5 km
  20 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 320-1BD00-2AA3

- **SCALANCE X320-3LD FE**;
  1 x 100 Mbit/s SC port, optical (multi-mode, glass), up to 5 km
  2 x 100 Mbit/s SC port, optical (single-mode, glass), up to 26 km
  20 x 10/100 Mbit/s RJ45 ports, electrical
  6GK5 320-3BF00-2AA3

Full Gigabit Ethernet switches

- **SCALANCE X308-2M**;
  4 x 10/100//1000 Mbit/s RJ45 ports, electrical
  2 x 10/100/1000 Mbit/s slots for 2-port media modules, electrical or optical
  6GK5 308-2GG00-2AA2

- **SCALANCE X308-2M TS**;
  4 x 10/100//1000 Mbit/s RJ45 ports, electrical
  2 x 10/100/1000 Mbit/s slots for 2-port media modules, electrical or optical, with extended temperature range and EN 50155 approval for railway applications
  6GK5 308-2GG00-2CA2

Accessories	
IE FC TP Standard Cable GP 2 x 2 (Type A)	**6XV1 840-2AH10**
4-core, shielded TP installation cable for connection to IE FC Outlet RJ45 / IE FC RJ45 Plug; PROFINET-compliant; with UL approval; <u>sold by the meter;</u> max. length 1000 m, minimum order 20 m	
IE FC TP Standard Cable GP 4 x 2	**6XV1 870-2E**
8-core, shielded TP installation cable for connection to IE FC RJ45 Modular Outlet for universal application; with UL approval; <u>sold by the meter;</u> max quantity 1000 m, minimum order 20 m	
IE TP Cord RJ45/RJ45	
TP cable 4 x 2 with two RJ45 connectors	
• 0.5 m	**6XV1 870-3QE50**
• 1 m	**6XV1 870-3QH10**
• 2 m	**6XV1 870-3QH20**
• 6 m	**6XV1 870-3QH60**
• 10 m	**6XV1 870-3QN10**
FO Standard Cable GP 50/125/1400 [2]	**6XV1 873-2A**
Multimode cable, <u>sold by the meter;</u> max. length 1000 m; minimum order 20 m	
FO Robust Cable GP 4E9/125/90	**6XV1 843-2R**
Singlemode cable, <u>sold by the meter;</u> max. length 1000 m; minimum order 20 m	
Glass fiber-optic cable, pre-assembled with 4 SC connectors [1]	
• 80 m	**6XV1 873-6AN80**
• 100 m	**6XV1 873-6AT10**
• 150 m	**6XV1 873-6AT15**
• 200 m	**6XV1 873-6AT20**
• 300 m	**6XV1 873-6AT30**
FC FO Standard Cable GP 62.5/200/230	**6XV1 847-2A**

■ Overview

- The SCALANCE X-300 product line consists of compact Industrial Ethernet switches for establishing electrical and/or optical line, ring and star topologies at 10/100/1000 Mbit/s

- Three integral electrical and/or optical Gigabit Ethernet interfaces (10/100/1000 Mbit/s) and seven electrical Fast Ethernet interfaces (10/100 Mbit/s) for interconnecting several switches to establish Gigabit or Fast Ethernet rings or to connect Industrial Ethernet nodes

- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet (SCALANCE X-300, SCALANCE X-400, SCALANCE X-500) and Fast Ethernet, e.g. combination with SCALANCE X-200 switches)

- Switches from the SCALANCE X-300 product line support numerous IT standard and thus permit seamless integration of automation networks into existing corporate networks. Virtual local area networks (VLANs) can be constructed

- The support of standardized redundancy procedures (Rapid Spanning Tree Protocol) permits redundant integration into higher-level enterprise networks

- By learning the multicast sources and destinations (IGMP Snooping and IGMP Querier (Internet Group Management Protocol)), SCALANCE X-300 switches can also filter multicast data traffic and thus limit the load on the network.

- The ports can be configured for terminal devices that support authentication in accordance with IEEE 802.1x. Authentication is done via a RADIUS server which has to be configured accordingly and must be able to be reached via the network.

- Rugged metal enclosure in S7-300 format for mounting on standard rail, S7-300 standard mounting rail or for direct wall mounting in various positions

- Compact, space-saving design for installation in control cabinet

- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing

- Redundant power supply for protection against power failure

- Diagnostics on the device by means of LEDs (power, link status, data traffic, fault, redundancy manager)

- Fault signaling contact, can be easily set by means of the SELECT/SET pushbutton for simple display of faults

- The devices feature PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail sending function for remote diagnosis and signaling via the network.

2

Overview

The SCALANCE XR-300 Industrial Ethernet switches are fully modular, high-performance, industry-standard switches for the construction of electrical and optical line, ring and star topologies with data transfer rates of 10/100/1000 Mbit/s, designed for installation in 19" control cabinets.

- As many as 24 electrical and/or optical interfaces (10/100/1000 Mbit/s);
  up to12 electrical and/or optical 2-port media modules can be inserted at any position in the basic unit

- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet (with SCALANCE X-300, X-400) and Fast Ethernet (e.g. in combination with SCALANCE X-200 switches)

- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standard functions (VLANs, IGMP-Snooping/Querier, STP/RSTP, Link Aggregation, Quality of Service)

- Redundant integration into higher-level networks thanks to support for standardized redundancy procedures (Spanning Tree Protocol/Rapid Reconfiguration Spanning Tree Protocol/ MRP)

- Remote diagnostics by means of PROFINET diagnostics, Web browser, CLI, or SNMP

Benefits

g e t **get**   Designed for Industry

- Unlimited flexibility during network expansions (e.g. more terminals) or conversion (e.g. switching from copper to fiber-optic cable) and reduction of the storage costs due to the modular construction using port modules

- High availability of the network thanks to:
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager, standby function, and STP/RSTP are integrated)
  - Easy device replacement by means of plug-in C-PLUG swap medium
  - Very fast reconfiguration of the network in the event of a fault

- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 port modules

- Protection of investment due to integration into existing network management systems by means of standardized SNMP access

- Time saving during engineering, commissioning and in the operating phase of a plant by using the integrated configuration and diagnostics in STEP 7, without additional software

- Space savings in control cabinet due to flexible cable outlet on the front or rear of the device

Application

The SCALANCE XR-300 is ideal for use in plant networks and for integrating the industrial network into an existing corporate network. Both at the field level and the control level, the switch performs the network with the distributed field devices and ensures high plant availability with extensive diagnostics options and high transmission speeds. The modularity permits perfect adaptation to the respective application through the use of electrical and also optical media modules

The SCALANCE XR-300 switch is suitable for establishing electrical and optical Industrial Ethernet line, star or ring topologies with 24 ports that can be optionally equipped with electrical and/or optical 2-port media modules. It can also be used as a hub in the plant bus (redundant connection is possible).

SCALANCE XR-300 managed

■ **Application** (continued)

Integration of control cabinets with SCALANCE X-300 in an optical Gigabit ring

The use of media modules in partly and fully modular versions of the SCALANCE X-300 switches supports:

- The extension of networks by subsequent insertion of additional media modules in unused media module slots
- The changing of cabling technology, e.g. conversion from copper to fiber-optic cables, or from multimode to single-mode FOC

◾ Design

The SCALANCE XR-300 Industrial Ethernet switches with rugged metal enclosure with IP30 degree of protection are optimized for installation in the 19" control cabinet. Versions are available with 24 V DC or 230 V AC connection. The connection of the power supply and the data cable outlet are located optionally either at the front or rear of the device.

The switches have:

- 4-pin terminal block for redundant voltage feed to protected against power failure at 24 V DC
- 3-pin terminal block for voltage feed in 230 V AC version
- 2-pin terminal block for connecting the isolated signaling contact for simple display of faults
- Row of LEDs for indicating status information (power, link status, data transfer, power supply, signal contact)
- SELECT/SET pushbutton for easy setting of the fault signaling contact on the device
- Slot for optional C-PLUG swap medium on the side of the device for easy replacement in the event of a fault
- Console port (serial interface) for on-site parameterization/ diagnostics (RJ11 cable to RS232 (9-pin) included in scope of delivery)

The SCALANCE XR-300 switches are available with the following port types:

- 12 slots for electrical or optical 2-port media modules for multi-mode or single-mode connections; the optical media modules are available in various connection technologies
- The RJ45 sockets are designed to industry standards with additional sleeves, for connection of the Industrial Ethernet FC RJ45 Plug 180
- All electrical Ethernet interfaces support 10/100/1000 Mbit/s, all optical Ethernet interfaces support 100 or 1000 Mbit/s
- The SCALANCE XR-300 switches support Gigabit Ethernet (1000 Mbit/s) at all ports. The 24 ports are divided into three groups of eight ports each (Gigabit Ethernet Blocking). Gigabit Ethernet is supported with full wire speed within each group, but not between the groups.

Product versions

SCALANCE XR324-12M (12 media module slots)

Versions are available with

- LEDs, power supply connection and data cable outlet on the front
- LEDs on the front, power supply connection and data cable outlet at the rear

All versions have twelve media module slots and

- 1 x 24 V DC power supply
- 1 x 230 V AC power supply

For versions containing cable outlet at the rear only the LED field and SELECT/SET buttons as well as the serial console port (RJ11) are at the front

Front

Rear

Slot for C-PLUG

Connection example:
IE FC RJ45 Plug FastConnect connector to MM992-2CUC media module (with retaining collar)

Connection example:
FC BFOC Plug FastConnect connector to MM991-2 media module (multimode)

G_IK10_XX_10283

SCALANCE XR-300 with cable outlet at rear

SCALANCE XR-300 managed

Function

- Integrated redundancy manager for constructing Fast Ethernet and Gigabit Ethernet ring topologies with high-speed media redundancy. Reliable communication is achieved by closing an optical or electrical line with SCALANCE X-400, X-300 or X-200 switches to form a ring. The redundancy manager (RM) integrated in the SCALANCE XR-300 switch monitors the function of the network. It recognizes the failure of a transmission link or a SCALANCE X switch in the ring and activates the substitute path within a maximum of 0.2 seconds.
- Redundant interfacing to company networks; SCALANCE XR-300 switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher level corporate network with reduced requirements for the reconfiguration time (in the order of seconds).
- Support of virtual networks (VLAN); for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.
- Load limiting when multicast protocols (e.g. video transmission) are used; through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE XR-300 switches can also filter multicast data traffic and therefore limit the load in the network. Multicast and broadcast traffic can be limited.
- Time synchronization; diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.
- Fast replacement of devices in event of failure, by means of the C-PLUG switching medium
- Link aggregation (IEEE 802.3ad) for bundling data streams
- Quality of Service (IEEE 802.1p) for prioritization of network traffic

Network topology and network configuration

The network topology can easily be adapted to the structure of the plant using SCALANCE XR-300 Industrial Ethernet switches .

The following network structures and combinations of structures can be implemented:

- Fast Ethernet with fast media redundancy; to increase network availability, as many as 50 X-200, X-300, X-400 or X-500 switches cascaded in line can be connected into a ring.
- Several rings can be redundantly linked through the standby function
- In addition, SCALANCE XR-300 supports redundant connection of the ring structure to the corporate network with a rapid spanning tree.
- Star topology with SCALANCE XR-300 switches: Each SCALANCE XR-300 switch represents a neutral point that can connect up to 24 nodes or subnets with each other electrically.

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 5 km at 100 Mbit/s
  - 750 m at 1 Gbit/s
- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 26 km to 70 km at 100 Mbit/s
  - 10 to 120 km at 1 Gbit/s
- Maximum cable length of the TP cable between two SCALANCE X switches:
  - Max. 100 m with IE FC cable 2x2 and IE FC RJ45 Plug 180
  - Max. 100 m at 1 Gbit/s with IE FC Standard Cable 4x2 (90 m), IE FC RJ45 Modular Outlet and patch cable (10 m)
  - Max. 10 m using patches with TP Cord

2

Function (continued)

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE XR-300 is switched to RM mode. The Gigabit ports (electrical or optical) are preferably used as ring ports. The non-ring ports of the RM can be used freely for the connection of data terminals and networks. If the redundancy procedure MRP standardized by PROFINET is used, the RM is adjusted automatically.

- Signal mask;
  the signal mask is set to the current status of the SCALANCE XR-300 (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).

- IP address;
  the IP address is assigned via DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using an enclosed software tool.

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100/1000 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode

- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.

- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Remote via standard browser (Web-based management): Selection of SCALANCE XR-300 switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3: Secure integration of SCALANCE XR-300 switches via the network into a network management system, e.g. SINEMA Server
  - Remote via PROFINET IO diagnostics: PROFINET diagnostic alarms from SCALANCE X-300 switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Fixed parameterization of the ports (data rates, half/full duplex)
- Setting of Spanning/Rapid Spanning Tree parameters
- Parameterization of the web management services
- Security
  - Ports can be connected or disconnected
  - Port-based network access control according to IEEE 802.1x
  - Authentication in accordance with IEEE 802.1x (available soon)
  - Support of Access Control List (ACL) (available soon)
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware versions or of the configuration data via the network by a TFTP server or directly via HTTP/HTTPS using a Web browser
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE XR-300 switch can independently send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE XR-300 switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

2

Overview

The SCALANCE X-300PoE product line comprises compact Industrial Ethernet switches for constructing electrical and/or optical line, star and ring topologies operating at data transfer rates of 10/100/1000 Mbit/s.

- Partially modular version with four integrated electrical, PoE-enabled Ethernet ports and two slots for 2-port media modules
- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet (SCALANCE X-300, X-400, X-500) and Fast Ethernet (e.g. in combination with SCALANCE X-200 switches)
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standards: Establishment of virtual networks (VLANs)
- Redundant integration into higher-level networks thanks to support for standardized redundancy procedures (Rapid Spanning Tree Protocol)
- PROFINET diagnostics, SNMP access, integrated web server and automatic e-mail transmission function for remote diagnostics and signaling via the network

Benefits

get Designed for Industry

- Unlimited flexibility during network expansions (e.g. more terminals) or conversion (e.g. switching from copper to fiber-optic cable) and reduction of the storage costs due to the modular construction using port modules
- Saving of additional power supply units and cabling for terminals by means of PoE voltage supply
- High availability of the network due to
  - redundant voltage feed
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager, standby function, and RSTP are integrated)
  - easy device replacement by means of plug-in C-PLUG swap medium
  - very fast reconfiguration of the network in event of a fault
- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 ports
- Protection of investment through integration into existing network management systems by means of standardized SNMP access
- Time saving during engineering, commissioning and in the operating phase of a plant due to the use of configuration and diagnostics integrated in STEP 7

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SCALANCE X-300PoE managed

2

▮ Application

SCALANCE X-300 products enable the establishment of switched networks both at the field level and at the control level where high data transfer rates are required in addition to high network availability and extensive diagnostics facilities.
The SCALANCE X308-2M PoE switch supplies PoE-compatible devices, such as IWLAN access points SCALANCE W, IP cameras and IP telephones, with energy over the data cable. The switch is designed with IP20 degree of protection for installation in control cabinets.

The main area of application is found in high-performance plant networks with interfaces to the corporate network.

Product version

Full Gigabit switches

SCALANCE X308-2M PoE (Power over Ethernet)

- For the construction of electrical and/or optical line, ring and star topologies with
  - four integrated electrical, PoE-compatible Gigabit Ethernet Ports and two slots for any 2-port media modules (see "Media modules for SCALANCE X-300")
- Star coupler in the plant bus (redundant connection is possible)

Supply of terminal devices with PoE by means of PoE-compatible switches

▮ Design

The SCALANCE X-300 Industrial Ethernet switches with their robust metal enclosure are optimized for mounting on a standard DIN rail and the S7-300 mounting rail. Direct wall mounting in different positions is also possible. Due to the S7-300 enclosure dimensions, the devices are ideally suited for integration in an automation system using S7-300 components.

The switches have:
- 4-pin terminal block for connection of the redundant power supply (2 x 24 V DC)
- Row of LEDs for indicating status information (power, link status, data transfer, error indication, redundancy manager, standby manager)
- 2-pin terminal block for connecting the isolated signaling contact
- SELECT/SET pushbutton for on-site configuration of the signaling contact
- Slot for optional C-PLUG swap medium on the rear of the device for the easy replacement of the device in the event of a fault
- SCALANCE X308-2M PoE has four integrated electrical, PoE-compatible Ethernet ports and two slots for accommodating 2-port media modules

2

■ Function

- Support of Power over Ethernet (PoE) according to IEEE 802.3at Type 1 (corresponds to IEEE 802.3af)

- Increase of the network performance; by filtering the data traffic on the basis of the Ethernet (MAC) address of the data terminals, data traffic remains local; only data intended for users of another subnetwork are forwarded by the switch.

- Simple network configuration and network expansion; the switch saves the data received at the ports and forwards it automatically to the destination address. The limitation of the network expansion by collision detection (CSMA/CD procedure) terminates at the port.

- Limitation of the error propagation to the affected subnetwork; the SCALANCE X-300 switches only forward data with a valid checksum (CRC).

- Integration of existing subnetworks with 10 Mbit/s into Fast Ethernet networks with 100 Mbit/s; at the twisted-pair ports, the SCALANCE X-300 switches automatically recognize the conductor pairs for transmission and reception (autocrossover), the data transfer rate of 10 or 100 or 1000 Mbit/s, as well as full-duplex and half-duplex mode (autonegotiation).

- High-performance connection of SCALANCE X-300 switches with 1 Gbit/s; SCALANCE X-300 PoE switches have up to eight Gigabit Ethernet ports for connecting the switches to each other or with other Gigabit-Ethernet-enabled components (e.g. SCALANCE X-400, X-500)

- Integrated redundancy manager for constructing Fast Ethernet and Gigabit Ethernet ring topologies with high-speed media redundancy.

- High-speed standby redundancy; several network segments such as rings can be interconnected redundantly with SCALANCE X-300 over the integrated standby function. Two X-300 switches are configured in a ring as a master and slave and are connected via two links to the other ring. The redundant link can be implemented at 1000 Mbit/s.

- Redundant interfacing to higher-level networks; SCALANCE X-300 switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher-level network with reduced requirements for the reconfiguration time (in the order of seconds).

- Support of virtual networks (VLAN); for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.

- Load limiting when multicast protocols (e.g. video transmission) are used; through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE X-300 switches can also filter multicast data traffic and therefore limit the load in the network.

- Configuration of the ports for terminals that support authentication in accordance with IEEE 802.1x. Authentication is by means of a RADIUS server that must be configured appropriately and must be accessible via the network.

- Support of the DHCP Option 82, 66, 67 (Dynamic Host Configuration Protocol); this facilitates the IP address assignment of a terminal depending on the connected switch port. The IP address is assigned via a DHCP Server, which has to be configured accordingly and must be able to be reached via the network.

- Support of Access Control List (ACL); if this function is activated for a port, the switch only forwards message frames received at this port if their source address is listed in the address table. All connected stations can be entered automatically in the ACL.

- Syslog; Syslog compliant with RFC 3164 is used in the IP network for transmitting short, unencrypted text messages via UDP. This requires the use of a Syslog server that must be configured appropriately and must be accessible via the network.

- Time synchronization; diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK or SNTP time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.

Network topology and network configuration

The SCALANCE X-300 Industrial Ethernet switches are typically accommodated together with the nodes to be connected in one control cabinet. Electrical and optical versions can be installed together in star, line and ring topologies.

The following network structures and combinations of structures can be implemented:

- Fast Ethernet and Gigabit Ethernet rings with fast media redundancy; to increase network availability, as many as 50 X-200, X-300, X-400 or X-500 switches can be cascaded in line can be connected into a ring.

- Several rings can be redundantly linked through the standby function.

- At the same time, SCALANCE X-300 supports redundant connection of the ring structure to the corporate network with Rapid Spanning Tree.

- Star topology with SCALANCE X300PoE switches: The SCALANCE X-308-2M PoE switch represents a neutral point that can connect up to eight nodes or subnets with each other electrically or optically.

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 750 m at 1 Gbit/s
  - 5 km at 100 Mbit/s

- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 10 to 120 km at 1 Gbit/s
  - 26 to 70 km at 100 Mbit/s

- Maximum cable length of the TP cable between two SCALANCE X switches:
  - Max. 100 m at 10/100 Mbit/s with IE FC Cable 2x2 and IE FC RJ45 Plug 180
  - Max. 100 m at 1 Gbit/s with IE FC Standard Cable 4x2 (90 m), IE FC RJ45 Modular Outlet and patch cable (10 m)
  - Max. 10 m using patches with TP Cord

2

■ **Function** (continued)

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE X-300 is switched to RM mode. The Gigabit ports (electrical or optical) are preferably used as ring ports.
- Signal mask;
  the signal mask is set to the current status of the SCALANCE X-300 (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).
- IP address;
  the IP address is assigned via DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using an enclosed software tool.

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100/1000 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode
- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.
- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Remote via standard browser (Web-based management): Selection of SCALANCE X-300 switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3:
    Secure integration of SCALANCE X-300 switches via the network into a network management system, e.g. SINEMA Server
  - Remote via PROFINET IO diagnostics:
    PROFINET diagnostic alarms from SCALANCE X-300 switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Fixed parameterization of the ports (data rates, half/full duplex)
- Parameterization of the VLANs and multicast services
- Parameterization of the standby connections for a redundant ring link
- Setting of Rapid Spanning Tree parameters
- Parameterization of the web management services
- Security
  - Ports can be connected or disconnected
  - Authentication in accordance with IEEE 802.1x
  - Support of Access Control List (ACL)
- Parameterization of the user administration of SNMP V1, V2c, V3:
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware versions or of the configuration data via the network by a TFTP server or directly via HTTP/HTTPS using a Web browser
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE X-300 switch can independently send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE X-300 switches can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

Accessories (continued)	

IE FC RJ45 Plug 180 2 x 2

RJ45 plug-in connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; with 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface

• 1 package = 1 unit	**6GK1 901-1BB10-2AA0**
• 1 package = 10 units	**6GK1 901-1BB10-2AB0**
• 1 package = 50 units	**6GK1 901-1BB10-2AE0**

IE FC RJ45 Plug 4 x 2

RJ45 plug-in connector for Industrial Ethernet (10/100/1000 Mbit/s) with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface

• 1 pack = 1 unit	**6GK1 901-1BB11-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB11-2AB0**
• 1 pack = 50 units	**6GK1 901-1BB11-2AE0**

FC SC Plug — **6GK1 900-1LB00-0AC0**

Screw connector for on-site assembly on FC fiber-optic cable; (1 pack = 10 Duplex Plugs + cleaning cloths)

IE FC Stripping Tool — **6GK1 901-1GA00**

Preadjusted stripping tool for fast stripping of the Industrial Ethernet FC cables

FC FO Termination Kit — **6GK1 900-1GL00-0AA0**

Assembly case for local assembly of FC SC and FC BFOC connectors to FC FO standard cable, comprising a stripping tool, Kevlar cutters, fiber breaking tool and microscope

IE FC RJ45 Modular Outlet

FastConnect RJ45 outlet for Industrial Ethernet with interface for insertion of a replacement insert;

• **with insert 2FE** ; replacement insert for 2 x 100 Mbit/s interface	**6GK1 901-1BE00-0AA1**
• **with insert 1GE** ; replacement insert for 1 x 1000 Mbit/s interface	**6GK1 901-1BE00-0AA2**

SITOP compact PSU100C 24 V/1.3 A — **6EP1 331-5BA10**

1-phase power supply with wide-range input 85 … 264 V AC/110 … 300 V DC, stabilized output voltage 24 V, rated output current value 1.3 A, slim design

More information

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular versions, the SIMATIC NET Selection Tool is available:

2

Overview

The SCALANCE XR-300PoE Industrial Ethernet switches are partly modular, high-performance, industry-standard switches for the construction of electrical and/or optical line, ring and star topologies at data transfer rates of 10/100/1000 Mbit/s, designed for installation in 19" control cabinets

- As many as 24 electrical and/or optical interfaces (10/100/1000 Mbit/s), of which 16 are integrated RJ45 ports, eight of which are PoE-compatible; up to four electrical and/or optical 2-port media modules can additionally be inserted in the media module slots of the basic unit
- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet (with SCALANCE X-300, X-400, X-500) and Fast Ethernet (e.g. in combination with SCALANCE X-200 switches)
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standard functions (VLANs, IGMP-Snooping/Querier, STP/RSTP, Link Aggregation, Quality of Service)
- Redundant integration into higher-level networks thanks to support for standardized redundancy procedures (Spanning Tree Protocol/Rapid Reconfiguration Spanning Tree Protocol/MRP)
- Remote diagnostics by means of PROFINET diagnostics, Web browser, CLI, or SNMP

Benefits

get Designed for Industry

- Unlimited flexibility during network expansions (e.g. more terminals) or conversion (e.g. switching from copper to fiber-optic cable) and reduction of the storage costs due to the modular construction using port modules
- Saving of additional power supply units and cabling for terminals by means of PoE voltage supply
- High availability of the network due to
  - redundant voltage feed
  - redundant network structures based on FOC or Twisted Pair (redundancy manager, standby function and STP/RSTP integrated)
  - easy device replacement by means of plug-in C-PLUG swap medium
  - very fast reconfiguration of the network in event of a fault
- lower susceptibility to faults and higher availability of the plant networking by latching the RJ45 FastConnect plug in the retaining collar of the RJ45 port modules
- Protection of investment through integration into existing network management systems by means of standardized SNMP access
- Time saving during engineering, commissioning and in the operating phase of a plant due to integrated configuration and diagnostics in STEP 7, without additional software
- Space savings in control cabinet due to flexible cable outlet on the front or rear of the device

Application

The SCALANCE XR-300PoE is ideal for use in plant networks and for integrating the industrial network into an existing corporate network. Both at the field level and the control level, the switch performs the network with the distributed field devices and ensures high plant availability with extensive diagnostics options and high transmission speeds. The modularity permits perfect adaptation to the respective application through the use of electrical and also optical media modules.

The SCALANCE XR-300PoE supplies PoE-compatible devices, such as IWLAN Access Points SCALANCE W, IP cameras and IP telephones, with energy over the data cable and is suitable for constructing electrical and/or optical Industrial Ethernet linear, star or ring structures with up to 24 ports, of which 16 RJ45 ports are pre-assigned. Eight of these support PoE. The switch can be optionally equipped with four electrical and/or optical 2-port media modules. It can also be used as a hub in the plant bus (redundant connection is possible).

SCALANCE XR-300PoE managed

Application (continued)

Supply of terminal devices with PoE by means of PoE-compatible switches

The use of media modules in partly and fully modular versions of the SCALANCE X-300 switches supports:

- The extension of networks by subsequent insertion of additional media modules in unused media module slots
- The changing of cabling technology, e.g. conversion from copper to fiber-optic cables, or from multimode to single-mode FOC

▪ Design

The SCALANCE XR-300PoE Industrial Ethernet switches with rugged metal enclosure with IP20 degree of protection are optimized for installation in the 19" control cabinet. Versions are available with either 24 V DC or 100 - 240 V AC connections. The connection of the power supply and the data cable outlet are located optionally either at the front or rear of the device.

The switches have:

- 4-pin terminal block for redundant voltage feed to protected against power failure at 24 V DC
- 2-pin terminal block for voltage feed at 100 - 240 V AC
- 2-pin terminal block for connecting the isolated signaling contact for simple display of faults
- Row of LEDs for indicating status information (power, link status, data transfer, power supply, signal contact)
- SELECT/SET pushbutton for easy setting of the fault signaling contact on the device
- Slot for optional C-PLUG swap medium on the side of the device for easy replacement in the event of a fault
- Console port (serial interface) for on-site parameterization/diagnostics (RJ11 cable to RS232 (9-pin) included in scope of delivery)

The SCALANCE XR-300PoE switches are available with the following types of port:

- 16 integrated RJ45 ports, eight RJ45 ports supporting PoE;
- The RJ45 sockets are designed to industry standards with additional sleeves, for connection of the Industrial Ethernet FC RJ45 Plug 180
- All electrical Ethernet interfaces support 10/100/1000 Mbit/s, all optical Ethernet interfaces support 100 or 1000 Mbit/s
- The SCALANCE XR-300 switches support Gigabit Ethernet (1000 Mbit/s) at all ports. The 24 ports are divided into three groups of eight ports each (Gigabit Ethernet Blocking). Gigabit Ethernet is supported with full wire speed within each group, but not between the groups.

Product versions

SCALANCE XR324-4M PoE (4 media module slots)

Versions are available with

- LEDs, power supply connection and data cable outlet on the front
- LEDs on the front, power supply connection and data cable outlet at the rear

All versions have twelve media module slots and

- 1 x 24 V DC power supply
- 1 x 100 - 240 V AC power supply unit

For versions containing cable outlet at the rear only the LED field and SELECT/SET buttons as well as the serial console port (RJ11) are at the front

Front

Rear

Slot for C-PLUG

Connection example:
IE FC RJ45 Plug FastConnect connector to MM992-2CUC media module (with retaining collar)

Connection example:
FC BFOC Plug FastConnect connector to MM991-2 media module (multimode)

SCALANCE XR-300 with cable outlet at rear

SCALANCE XR-300PoE managed

2

■ Function

- Support of Power over Ethernet (PoE) to IEEE 802.3at Type1 (corresponds to IEEE 802.3af)
- Integrated redundancy manager for constructing Fast Ethernet and Gigabit Ethernet ring topologies with high-speed media redundancy. Reliable communication is achieved by closing an optical or electrical line with SCALANCE X-400, X-300 or X-200 switches to form a ring. The redundancy manager (RM) integrated in the SCALANCE XR-300 switch monitors the function of the network. It recognizes the failure of a transmission link or a SCALANCE X switch in the ring and activates the substitute path within a maximum of 0.2 seconds.
- Redundant interfacing to company networks; SCALANCE XR-300 switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher level corporate network with reduced requirements for the reconfiguration time (in the order of seconds).
- Support of virtual networks (VLAN); for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.
- Load limiting when multicast protocols (e.g. video transmission) are used; through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE XR-300 switches can also filter multicast data traffic and therefore limit the load in the network. Multicast and broadcast traffic can be limited.
- Time synchronization; diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.
- Link aggregation (IEEE 802.3ad) for bundling data streams
- Quality of Service (IEEE 802.1p) for prioritization of network traffic

Network topology and network configuration

The network topology can easily be adapted to the structure of the plant using SCALANCE XR-300 Industrial Ethernet switches .

The following network structures and combinations of structures can be implemented:

- Fast Ethernet with fast media redundancy; to increase network availability, as many as 50 X-200, X-300, X-400 or X-500 switches cascaded in line can be connected into a ring.
- Several rings can be redundantly linked through the standby function
- In addition, SCALANCE XR-300 supports redundant connection of the ring structure to the corporate network with a rapid spanning tree.
- Star topology with SCALANCE XR-300 switches: Each SCALANCE XR-300 switch represents a neutral point that can connect up to 24 nodes or subnets with each other electrically.

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 5 km at 100 Mbit/s
  - 750 m at 1 Gbit/s
- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 26 to 70 km at 100 Mbit/s
  - 10 to 120 km at 1 Gbit/s
- Maximum cable length of the TP cable between two SCALANCE X switches:
  - Max. 100 m at 10/100 Mbit/s with IE FC Cable 2x2 and IE FC RJ45 Plug 180
  - Max. 100 m at 1 Gbit/s with IE FC Standard Cable 4x2 (90 m), IE FC RJ45 Modular Outlet and patch cable (10 m)
  - Max. 10 m using patches with TP Cord

2

■ **Function** (continued)

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE XR-300 is switched to RM mode. The Gigabit ports (electrical or optical) are preferably used as ring ports. The non-ring ports of the RM can be used freely for the connection of data terminals and networks. If the redundancy procedure MRP standardized by PROFINET is used, the RM is adjusted automatically.

- Signal mask;
  the signal mask is set to the current status of the SCALANCE XR-300 (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).

- IP address;
  the IP address is assigned via DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using an enclosed software tool.

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100/1000 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode

- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.

- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Remote via standard browser (Web-based management): Selection of SCALANCE XR-300 switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3:
    Secure integration of SCALANCE XR-300 switches via the network into a network management system, e.g. SINEMA Server
  - Remote via PROFINET IO diagnostics:
    PROFINET diagnostic alarms from SCALANCE X-300 switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Fixed parameterization of the ports (data rates, half/full duplex)
- Setting of Spanning/Rapid Spanning Tree parameters
- Parameterization of the web management services
- Security
  - Ports can be connected or disconnected
  - Port-based network access control according to IEEE 802.1x
  - Authentication in accordance with IEEE 802.1x (available soon)
  - Support of Access Control List (ACL) (available soon)
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware versions or of the configuration data via the network by a TFTP server or directly via HTTP/HTTPS using a Web browser
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE XR-300 switch can independently send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE XR-300 switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

SCALANCE XR324-4M PoE Industrial Ethernet switches

Partly modular 19" Industrial Ethernet switches for setting up electrical and optical Industrial Ethernet networks; eight PoE-compatible ports can optionally be equipped with optical or electrical 2-port media modules; all ports support Gigabit Ethernet (blocking), integrated redundancy manager, RSTP, RMON, IGMP-Snooping/Querier, network management via SNMP, PROFINET, and web server 16 x 10/100/1000 Mbit/s RJ45 ports, eight of which support PoE; 4 x 10/100/1000 Mbit/s slots for 2-port media modules, electrical or optical

24 V DC power supply
• Data cable outlet at front — 6GK5 324-4QG00-1AR2
• Data cable outlet at rear — 6GK5 324-4QG00-1HR2

100-240 V AC power supply
• Data cable outlet at front — 6GK5 324-4QG00-3AR2
• Data cable outlet at rear — 6GK5 324-4QG00-3HR2

Media modules — See "Media modules for modular SCALANCE X-300 managed"

SITOP modular, 5 A — 6EP1 333-3BA00

Single-phase and 2-phase power supply with wide-range input 85 ... 264 V / 176 V … 550 V AC, regulated output voltage 24 V, output current rated value 5 A

■ **More information**

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular versions, the SIMATIC NET Selection Tool is available:

Overview

The SCALANCE X-300EEC (**E**nhanced **E**nvironmental **C**onditions) product line comprises compact Industrial Ethernet switches with IT functions for constructing electrical and/or optical line, star and ring topologies at data transfer rates of 10/100/1000 Mbit/s.

- Suitable for use in extremely harsh industrial environments and in low-voltage and high-voltage switchgear thanks to:
  - Extended temperature range (-40 to +70 °C, briefly to +85 °C)
  - Special coating on PCBs (conformal coating)
  - Support for special protocols and standards (IEEE 1613 and IEC 61850-3)
  - Wide-range power supplies (60 to 250 V AC/DC)
- As many as nine integrated electrical and/or optical Ethernet interfaces (10/100/1000 Mbit/s) support the interconnection of a number of switches, the construction of optical/electrical rings, or the connection of several Industrial Ethernet nodes
- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet and Fast Ethernet
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standard functions (VLANs, IGMP-Snooping/Querier, STP/RSTP)
- PROFINET diagnostics, SNMP access, integrated web server and CLI for remote diagnostics and signaling via the network

Benefits

g e t   **get**   Designed for Industry

- Increased reliability of the network due to hardware and software functions specially geared to the particular requirements of power system plants and extreme environmental conditions
- High availability of the network thanks to:
  - Redundant power supply
  - Redundant network components (optional)
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager, standby function, MRP and RSTP are integrated)
  - Easy device replacement by means of plug-in C-PLUG swap medium
  - Very fast reconfiguration of the network in the event of a fault
- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 ports
- Protection of investment due to integration into existing network management systems by means of standardized SNMP access
- Time saving during engineering, commissioning and in the operating phase of a plant by using the integrated configuration and diagnostics in STEP 7, without additional software

Application

SCALANCE X-300EEC products enable the establishment of switched networks both at the field level and at the control level where high data transfer speeds are required in addition to high network availability and extensive diagnostics facilities. The switches are designed in degree of protection IP30 for installation in control cabinets.

The main area of application is found in high-performance plant networks with interfaces to the corporate network. Thanks to the immunity to electromagnetic interference of the SCALANCE X-300EEC switches, the devices can also be used in medium/high voltage substations.

In addition, SCALANCE X-300EEC switches are suitable for use in railway applications thanks to their specification in accordance with EN 50155.

Their compact, space-saving design (19"/2) also makes them ideal for installation in control cabinets. In addition, specially selected components permit the use of the devices over a wide temperature range (-40 °C to +70 °C, temporarily up to +85 °C). All versions are also available with specially protected printed-circuit boards (conformal coating) for use in environments subject to contamination.

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

SCALANCE X-300EEC managed

■ **Application** (continued)

Electrical network structure in power switchgear with SCALANCE X-300EEC and XR324-4M EEC

■ **Design**

The SCALANCE X-300EEC Industrial Ethernet switches with rugged metal enclosure are optimized for mounting on a standard DIN rail. Thanks to the enclosure dimension 19"/2 (internal dimension), two devices can be mounted side by side in a 19" cabinet.

The switches have:

- a 4-pin terminal block for connecting the redundant power supply (2 x 24 V DC)
- A 2-pin terminal block for connecting the isolated signaling contact
- A row of LEDs to indicate the status information (power, link status, data traffic, power supply, signaling contact)
- SELECT/SET key for on-site configuration of the signaling contact
- Slot for optional C-PLUG swap medium on the top of the device for easy replacement in the event of a fault
- Guide rails for strain-relief attachment of the RJ45 and LC connection to the switch

The SCALANCE X-300EEC switches are available with the following port types:

- As many as seven integrated fiber-optic ports for connecting the SCALANCE X switches with one another (multimode). The Fast Ethernet fiber optic ports are designed using LC connection technology.
- Up to seven integrated twisted pair ports; the RJ45 sockets are designed to be industry-compatible with additional retaining mechanisms, for connection of the Industrial Ethernet FC RJ45 Plug 180.

Product versions

SCALANCE X307-2EEC

- 5 x 10/100 Mbit/s RJ45 port, electrical
- 2 x 10/100/1000 Mbit/s RJ45 port, electrical
- 2 x 100 Mbit/s LC Port optical (multimode, glass), up to 5 km

SCALANCE X302-7EEC

- 2 x 10/100/1000 Mbit/s RJ45 port, electrical
- 7 x 100 Mbit/s LC Port optical (multimode, glass), up to 5 km

SCALANCE X307-2EEC and X302-7EEC are available in versions for

- 24 V DC (single or redundant) and
- with wide-range power supplies for 60 to 250 V DC / 100-240 V AC (single or redundant) as well as
- with or without PCB coating (conformal coating)

2

■ Function

- Integrated redundancy manager for constructing ring topologies with fast media redundancy Rings consisting of SCALANCE X-300 and X-400 switches can be operated at 1000 Mbit/s. In rings with SCALANCE X-200 or OSM/ESM it is possible to integrate SCALANCE X-300EEC switches at 100 Mbit/s.
- Redundant interfacing to corporate networks; SCALANCE X-300EEC switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher level corporate network with reduced requirements for the reconfiguration time (in the order of seconds).
- Support of virtual networks (VLAN); for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.
- Load limiting when multicast protocols (e.g. Querier, video transmission) are used; through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE X-300EEC switches can also filter multicast data traffic and therefore limit the load in the network.
- Time synchronization; diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK or SNTP time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.
- Fast replacement of devices in event of failure, by means of the C-PLUG switching medium

Network topology and network configuration

The SCALANCE X-300EEC Industrial Ethernet switches with degree of protection IP30 can be adapted to the structure of the plant in star, line and ring topologies.

The following network structures and combinations of structures can be implemented:

- Fast Ethernet rings with fast media redundancy; to increase network availability, as many as 50 X-200, X-300, or X-400 switches cascaded in line can be connected into a ring with a total length of up to 150 km. On the failure of a transmission link or of a SCALANCE X switch in the ring, the transmission path is reconfigured within 0.3 seconds (0.2 seconds for MRP).
- Several rings can be redundantly linked through the standby function
- Construction of interconnected network structures by means of rapid spanning tree protocol (RSTP)
- At the same time, SCALANCE X-300EEC supports redundant connection of the ring structure to the corporate network with a rapid spanning tree.
- Star topology with SCALANCE X-300EEC switches: The SCALANCE X-300EEC switch represents a neutral point that can connect up to nine nodes or subnets with each other.

When configuring the network, it is necessary to observe the following constraints:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 5000 m at 100 Mbit/s
- Maximum cable length of the TP cable between two SCALANCE X switches:
  - max. 100 m

SCALANCE X-300EEC managed

Function (continued)

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE X-300EEC is switched to RM mode. The non-ring ports of the RM can be used freely for the connection of data terminals and networks. If the redundancy procedure MRP standardized by PROFINET is used, the RM is adjusted automatically.

- Signal mask;
  the signal mask is set to the current status of the SCALANCE X-300EEC (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode

- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.

- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Remote via standard browser (Web-based management):
    Selection of SCALANCE X-300 switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3:
    Secure connection of SCALANCE X-300EEC switches via the network to a network management station
  - Remote via PROFINET IO diagnostics:
    PROFINET diagnostic alarms from SCALANCE X-300EEC switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Parameterization of the web management services
- Setting of Rapid Spanning Tree parameters
- Fixed parameterization of the ports (data rates, half/full duplex)
- Security
  - Ports can be connected or disconnected
  - Authentication in accordance with IEEE 802.1x (available soon)
  - Support of Access Control List (ACL) (available soon)
- Parameterization of user administration of SNMP V1, V2c, V3
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading new firmware updates or configuration data via the network from one TFTP server or directly via HTTP/HTTPs with an Internet or Web browser.
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE X-300EEC switch can independently send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions:
The SCALANCE X-300EEC switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

SCALANCE X-300EEC Industrial Ethernet switches

Compact Industrial Ethernet switches for setting up electrical and/or optical Industrial Ethernet networks; RSTP, RMON, IGMP Snooping/ Querier, management functionality via SNMP, PROFINET and web server, 24 V power supply; EN 50155 approval for railway applications

SCALANCE X302-7EEC;
2 x 10/100/1000 Mbit/s RJ45 ports, electrical;
7 x 100 Mbit/s LC ports, optical (multimode, glass) up to 5 km

24 V DC power supply
- 1 power supply — 6GK5 302-7GD00-1EA3
- 2 power supplies — 6GK5 302-7GD00-2EA3
- 1 power supply with conformal coating — 6GK5 302-7GD00-1GA3
- 2 power supplies with conformal coating — 6GK5 302-7GD00-2GA3

100-240 AC / 60-250 V DC power supply
- 1 power supply — 6GK5 302-7GD00-3EA3
- 2 power supplies — 6GK5 302-7GD00-4EA3
- 1 power supply with conformal coating — 6GK5 302-7GD00-3GA3
- 2 power supplies with conformal coating — 6GK5 302-7GD00-4GA3

SCALANCE X307-2EEC;
5 x 10/100 Mbit/s RJ45 ports, electrical;
2 x 10/100/1000 Mbit/s RJ45 ports, electrical
2 x 100 Mbit/s LC ports, optical (multimode, glass) up to 5 km

24 V DC power supply
- 1 power supply — 6GK5 307-2FD00-1EA3
- 2 power supplies — 6GK5 307-2FD00-2EA3
- 1 power supply with conformal coating — 6GK5 307-2FD00-1GA3

Accessories

IE FC TP Standard Cable GP 2 x 2 (Type A) — 6XV1 840-2AH10

4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/IE FC RJ45 Plug; PROFINET-compliant; with UL approval; sold by the meter; max. length 1000 m, minimum order 20 m

IE FC TP standard cable GP 4 x 2

8-core, shielded TP installation cable for connection to IE FC RJ45 Modular Outlet for universal application; with UL approval; sold by the meter; max quantity 1000 m, minimum order 20 m
- AWG 22, for connection to IE FC RJ45 Modular Outlet — 6XV1 870-2E
- AWG 24, for connection to IE FC RJ45 Plug 4 x 2 — 6XV1 878-2A

IE FC TP Flexible Cable GP 4 x 2

8-core, shielded TP installation cable for occasional moving; with UL approval; sold by the meter; max. length 1000 m, minimum order 20 m
- AWG 24, for connection to IE FC RJ45 Plug 4 x 2 — 6XV1 878-2B

IE TP Cord RJ45/RJ45

TP cable 4 x 2 with two RJ45 connectors
- 0.5 m — 6XV1 870-3QE50
- 1 m — 6XV1 870-3QH10
- 2 m — 6XV1 870-3QH20
- 6 m — 6XV1 870-3QH60
- 10 m — 6XV1 870-3QN10

Ordering data	Order No.
Accessories (continued)	
IE FC RJ45 Plug 180	
RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; with 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface	
• 1 pack = 1 unit	**6GK1 901-1BB10-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB10-2AB0**
• 1 pack = 50 units	**6GK1 901-1BB10-2AE0**
IE FC RJ45 Plug 4 x 2	
RJ45 plug connector for Industrial Ethernet (10/100/1000 Mbit/s) with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface	
• 1 pack = 1 unit	**6GK1 901-1BB11-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB11-2AB0**
• 1 pack = 50 units	**6GK1 901-1BB11-2AE0**
IE FC Stripping Tool	**6GK1 901-1GA00**
Preadjusted stripping tool for fast stripping of the Industrial Ethernet FC cables	
SIPLUS PS modular 5 A	**6EP1 933-3BA00**
Single-phase and 2-phase power supply with wide-range input 85 ... 264 V / 176 V … 550 V AC, regulated output voltage 24 V, output current rated value 5 A, coating of the PCB and electronic components (conformal coating)	
IE FC RJ45 Modular Outlet	
FastConnect Outlet RJ45 for Industrial Ethernet with interface for a replaceable insert	
• with insert 2FE ; replaceable insert for 2 x 100 Mbit/s interfaces	**6GK1 901-1BE00-0AA1**
• with insert 1GE; replaceable insert for 1 x 1000 Mbit/s interfaces	**6GK1 901-1BE00-0AA2**

More information

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular versions, the SIMATIC NET Selection Tool is available:

SCALANCE XR-300EEC managed

2

Overview

The SCALANCE XR-300EEC (**E**nhanced **E**nvironmental **C**onditions) industrial Ethernet switches are partly modular, high-performance, industry-standard switches for the construction of electrical and/or optical line, ring and star topologies at data transfer rates of 10/100/1000 Mbit/s, designed for installation in 19" control cabinets.

- As many as 24 electrical and/or optical interfaces (10/100/1000 Mbit/s), of which 16 are integral RJ45 ports; up to four electrical and/or optical 2-port media modules can also be inserted in the media module slots of the basic device
- Suitable for use in extremely harsh industrial environments and in low-voltage and high-voltage switchgear thanks to:
  - Extended temperature range (-40 to +70 °C, briefly to +85 °C)
  - Support for special protocols and standards (IEEE 1613 and IEC 61850-3)
  - Wide-range power supplies (60 to 250 V AC/DC)
- High-speed media redundancy through integral redundancy manager both for Gigabit Ethernet and Fast Ethernet
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standards (VLANs, IGMP-Snooping/Querier, STP/RSTP, Link Aggregation, Quality of Service)
- Remote diagnostics by means of PROFINET diagnostics, Web browser, CLI, or SNMP

Benefits

g **e** **get** Designed for Industry

- Increased availability of the network due to hardware and software functions specially geared to the particular requirements of energy technology plants and extreme environmental conditions
- Unlimited flexibility during network expansions (e.g. more terminals) or conversion (e.g. switching from copper to fiber-optic cable) and reduction of the storage costs due to the modular construction using port modules
- High availability of the network thanks to:
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager, standby function, and STP/RSTP are integrated)
  - Easy device replacement by means of plug-in C-PLUG swap medium
  - Very fast reconfiguration of the network in the event of a fault
- Lower susceptibility to failure and higher availability of the plant networking due to latching of the RJ45 FastConnect connectors in the sleeve of the RJ45 port modules
- Protection of investment due to integration into existing network management systems by means of standardized SNMP access
- Time saving during engineering, commissioning and in the operating phase of a plant by using the integrated configuration and diagnostics in STEP 7, without additional software

Application

The SCALANCE XR-300EEC is ideal for use in plant networks and for integrating the industrial network into an existing corporate network. Both at the field level and the control level, the switch performs the network with the distributed field devices and ensures high plant availability with extensive diagnostics options and high transmission speeds.
The modularity permits perfect adaptation to the respective application through the use of electrical and/or optical media modules.

The main area of application is found in high-performance plant networks with interfaces to the corporate network. Thanks to the immunity to electromagnetic interference of the SCALANCE XR-300EEC switches, the devices can also be used in medium/high voltage substations.

The SCALANCE XR-300EEC switch is suitable for establishing optical Industrial Ethernet line, star or ring topologies with 24 ports, 16 of which are integrated RJ45 ports. Up to four electrical and/or optical 2-port media modules can also be inserted in the media module slots of the basic device.
The switch can also be used as a hub in the plant bus (redundant connection is possible).

The use of media modules in partly and fully modular versions of the SCALANCE X-300 switches supports:

- Extension of networks by subsequent insertion of additional media modules in unused media module slots
- Changing of cabling technology, such as conversion from copper to fiber-optic cables, or from multimode to single-mode FOC

2

■ **Application** (continued)

Star structure in switchgear under extreme ambient conditions with SCALANCE XR324-4M EEC and X-300EEC

■ **Design**

The SCALANCE XR-300EEC Industrial Ethernet switches with rugged metal enclosure with degree of protection IP20 are optimized for installation in the 19" cabinet.

The switches have:

- 4-pin terminal block for redundant voltage feed for protection against voltage failure in 24 V DC version
- 3-pin terminal block for voltage feed in 230 V AC version
- 2-pin terminal block for connecting the isolated signaling contact for simple display of faults
- A row of LEDs to indicate the status information (power, link status, data traffic, power supply, signaling contact)
- SELECT/SET pushbutton for simple adjustment of the fault signaling contact on the device
- Slot for optional C-PLUG swap medium on the side of the device for easy replacement in the event of a fault
- Console port (serial interface) for on-site parameterization/diagnostics (RJ11 cable to RS232 (9-pin) included in scope of delivery)

The SCALANCE XR-300EEC switches are available with the following port types:

- 16 integrated RJ45 ports;
  The RJ45 sockets are designed to be industry-compatible with additional sleeves, for connection of the Industrial Ethernet FC RJ45 Plug 180

- Four slots for electrical or optical 2-port media modules for multimode or single-mode connections; the optical media modules are available in various connection technologies
- All electrical Ethernet interfaces support 10/100/1000 Mbit/s, all optical Ethernet interfaces support 100 or 1000 Mbit/s
- The SCALANCE XR-300EEC switches support Gigabit Ethernet (1000 Mbit/s) at all ports.
  The 24 ports are divided into three groups of eight ports each (Gigabit Ethernet Blocking). Gigabit Ethernet is supported with full wire speed within each group, but not between the groups.

Product versions

SCALANCE XR324-4M EEC (4 media module slots)

Versions are available with

- LEDs, data cable outlet on the front and power supply connection at the rear
- LEDs, power supply connection on the front, data cable outlet at the rear

All versions have four media module slots and

- 1 x 24 V DC power supply
- 2 x 24 V DC power supplies
- 1 x 230 V AC power supply
- 2 x 230 V AC power supplies

SCALANCE XR-300EEC managed

2

■ Function

- Integrated redundancy manager for constructing Fast Ethernet and Gigabit Ethernet ring topologies with high-speed media redundancy. Reliable communication is achieved by closing an optical or electrical line with SCALANCE X-400, X-300 or X-200 switches to form a ring. The redundancy manager (RM) integrated in the SCALANCE XR-300 switch monitors the function of the network. It recognizes the failure of a transmission link or a SCALANCE X switch in the ring and activates the substitute path within a maximum of 0.2 seconds.

- Redundant interfacing to corporate networks; SCALANCE XR-300EEC switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher level corporate network with reduced requirements for the reconfiguration time (in the order of seconds).

- Support of virtual networks (VLAN); for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.

- Load limiting when multicast protocols (e.g. video transmission) are used; through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE XR-300EEC switches can also filter multicast data traffic and therefore limit the load in the network. Multicast and broadcast traffic can be limited.

- Time synchronization; diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.

- Fast replacement of devices in event of failure, by means of the C-PLUG switching medium

- Link aggregation (IEEE 802.3ad) for bundling data streams

- Quality of Service (IEEE 802.1p) for prioritization of network traffic

Network topology and network configuration

The network topology can easily be adapted to the structure of the plant using SCALANCE XR-300 Industrial Ethernet switches .

The following network structures and combinations of structures can be implemented:

- Fast Ethernet rings with fast media redundancy; to increase network availability, as many as 50 X-200, X-300, X-400 or X-500 switches cascaded in line can be connected into a ring.
- Several rings can be redundantly linked through the standby function
- At the same time, SCALANCE XR-300EEC supports redundant connection of the ring structure to the corporate network with a rapid spanning tree.
- Star topology with SCALANCE XR-300EEC switches: The SCALANCE XR-300EEC switch represents a neutral point that can interconnect up to 24 nodes or subnets electrically.

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 5 km at 100 Mbit/s
  - 750 m at 1000 Mbit/s
- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 26 to 70 km at 100 Mbit/s
  - 10 to 120 km at 1000 Mbit/s
- Maximum cable length of the TP cable between two SCALANCE X switches:
  - Max. 100 m with IE FC cable 2x2 and IE FC RJ45 Plug 180
  - Max. 100 m at 1000 Mbit/s with IE FC Standard Cable 4x2 (90 m), IE FC RJ45 Modular Outlet and patch cable (10 m)
  - Max. 10 m using patches with TP cord

2

Function (continued)

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE XR-300EEC is switched to RM mode. The Gigabit ports (electrical or optical) are preferably used as ring ports. The non-ring ports of the RM can be used freely for the connection of data terminals and networks. If the redundancy procedure MRP standardized by PROFINET is used, the RM is adjusted automatically.

- Signal mask;
  the signal mask is set to the current status of the SCALANCE XR-300EEC (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).

- IP address;
  the IP address is assigned via DHCP (Dynamic Host Configuration Protocol). If there is no corresponding server in the network, the IP address can be assigned using an enclosed software tool.

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100/1000 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode

- The status of the signaling contact is routed externally by means of floating relay contacts. This enables the module to be monitored via an input module from a controller.

- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Remote via standard browser (Web-based management): Selection of SCALANCE XR-300EEC switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3:
    Secure integration of SCALANCE XR-300EEC switches via the network to a network management system, e.g. SINEMA Server
  - Remote via PROFINET IO diagnostics:
    PROFINET diagnostic alarms from SCALANCE XR-300EEC switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Parameterization of the web management services
- Setting of Rapid Spanning Tree parameters
- Fixed parameterization of the ports (data rates, half/full duplex)
- Security
  - Ports can be connected or disconnected
  - Port-based network access control according to IEEE 802.1x (available soon)
  - Support of Access Control List (ACL) (available soon)
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware versions or of the configuration data via the network by a TFTP server or directly via HTTP/HTTPS using a Web browser
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE XR-300EEC switch can independently send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE X-300EEC switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

Industrial Ethernet Switches SCALANCE XR324-4M EEC

Partially modular 19" Industrial Ethernet switches for establishing electrical and optical Industrial Ethernet networks; all ports can be optionally equipped with optical or electrical 2-port media modules); All ports support Gigabit Ethernet (blocking), integrated redundancy manager, RSTP, RMON, IGMP snooping querier, network management via SNMP, PROFINET and Web server 16 x 10/100/1000 Mbit/s RJ45 ports, electrical 4 x 10/100/1000 Mbit/s slots for 2-port media modules, electrical or optical

SCALANCE XR324-4M EEC

Power supply 1 x 24 V DC
- Data cable outlet at front   **6GK5 324-4GG00-1ER2**
- Data cable outlet at rear   **6GK5 324-4GG00-1JR2**

Power supply
1 x 100-240 AC / 60-250 V DC
- Data cable outlet at front   **6GK5 324-4GG00-3ER2**
- Data cable outlet at rear   **6GK5 324-4GG00-3JR2**

Power supply 2 x 24 V DC
- Data cable outlet at front   **6GK5 324-4GG00-2ER2**
- Data cable outlet at rear   **6GK5 324-4GG00-2JR2**

Power supply
2 x 100-240 AC / 60-250 V DC
- Data cable outlet at front   **6GK5 324-4GG00-4ER2**
- Data cable outlet at rear   **6GK5 324-4GG00-4JR2**

Media modules   See "Media modules for modular SCALANCE X-300 managed"

SIPLUS PS modular 5 A   **6EP1 933-3BA00**

Single-phase and 2-phase power supply with wide-range input 85 ... 264 V / 176 V … 550 V AC, regulated output voltage 24 V, output current rated value 5 A, coating of the PCB and electronic components (conformal coating)

■ More information

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters
Media modules
for modular SCALANCE X-300 managed

Overview

- 2-port media modules for flexible, 2-port-granular equipping of partly and fully modular versions of the SCALANCE X-300 switches (e.g. SCALANCE X308-2M, SCALANCE XR324-12M)
- Electrical versions with RJ45 ports are available as well as optical versions with BFOC and SC ports for the use of multimode and singlemode fiber-optic cables
- A 2-port SFP media module permits the the optional use of fiber-optic SFP plug-in transceivers (**S**mall **F**orm-Factor **P**luggable) with LC connection technology

Benefits

g e t — Designed for Industry

- Unlimited flexibility in the case of network expansions (e.g. more terminals) or conversion (e.g. from copper to fiber-optic cables) due to modular design with media modules
- Reduction of storage costs and maintenance overhead by focusing on a few basic device versions

Application

The use of media modules in partly and fully modular versions of the SCALANCE X-300 switches supports:

- Extension of networks by subsequent insertion of additional media modules in unused media module slots
- Change of cabling technology (e.g. conversion from copper to fiber-optic cables, or from multi-mode to single-mode FOC)

Design

Insertion of 2-port media modules in media module slot

Product versions of media modules

**Electrical media modules
with 2 x 10/100/1000 Mbit/s RJ45 ports**

- MM992-2CUC with retaining sleeve
- MM992-2CU without retaining sleeve

Optical media modules with 2 x 100 Mbit/s BFOC ports

- MM991-2
  multimode, glass, up to 5 km
- MM991-2LD
  single-mode, glass, up to 26 km

Optical media modules with 2 x 100 Mbit/s SC ports

- MM991-2
  multimode, glass, up to 5 km
- MM991-2LD
  single-mode, glass, up to 26 km
- MM991-2LH+
  single-mode, glass, up to 70 km

Optical media modules with 2 x 1000 Mbit/s SC ports

- MM992-2
  multimode, glass, up to 750 m
- MM992-2LD
  single-mode, glass, up to 10 km
- MM992-2LH
  single-mode, glass, up to 40 km
- MM992-2LH+
  single-mode, glass, up to 70 km
- MM992-2ELH
  single-mode, glass, up to 120 km

**Optical media modules with 2 x 100/1000 Mbit/s
for SFP pluggable transceiver**

- MM992-2SFP
  for SFP plug-in transceivers with 1 x 100 Mbit/s or
  1 x 1000 Mbit/s multi-mode or single-mode, glass

Product versions of SFP pluggable transceivers

The SFP plug-in transceivers (**S**mall **F**orm-factor **P**luggable) can
only be used together with the SFP media module MM992-2SFP.

**Optical SFP pluggable transceivers
with 1 x 100 Mbit/s LC port**

- SFP991-1
  multimode, glass, up to 5 km
- SFP991-1LD
  single-mode, glass, up to 26 km
- SFP991-1LH+
  single-mode, glass, up to 70 km

**Optical SFP pluggable transceivers
with 1 x 1000 Mbit/s LC port**

- SFP992-1
  multimode, glass, up to 750 m
- SFP992-1LD
  single-mode, glass, up to 10 km
- SFP992-1LH
  single-mode, glass, up to 40 km
- SFP992-1LH+
  single-mode, glass, up to 70 km
- SFP992-1ELH
  single-mode, glass, up to 120 km

SFP991-1LH+					1x LC	70 km
SFP992-1		1x LC				750 m
SFP992-1LD			1x LC			10 km
SFP992-1LH			1x LC			40 km
SFP992-1LH+			1x LC			70 km
SFP992-1ELH			1x LC			120 km

[1] with retaining collars
[2] The MM392-2SFP SFP slot module can accommodate up to two 1-port SFP modules
[3] Can only be plugged into an MM392-2SFP slot module

Ordering data	Order No.
Electrical media modules	
with 2 x 10/100/1000 Mbit/s RJ45 ports, electrical	
• MM992-2CUC with retaining sleeve	**6GK5 992-2GA00-8AA0**
• MM992-2CU without retaining sleeve	**6GK5 992-2SA00-8AA0**
Fiber optic modules	
with 2 x 100 Mbit/s BFOC ports, optical	
• MM991-2 multimode, glass, up to 5 km	**6GK5 991-2AB00-8AA0**
• MM991-2LD single-mode, glass, up to 26 km	**6GK5 991-2AC00-8AA0**
with 2 x 100 Mbit/s SC ports, optical	
• MM991-2 multimode, glass, up to 5 km	**6GK5 991-2AD00-8AA0**
• MM991-2LD single-mode, glass, up to 26 km	**6GK5 991-2AF00-8AA0**
• MM991-2LH+ single-mode, glass, up to 70 km	**6GK5 991-2AE00-8AA0**
with 2 x 1000 Mbit/s SC ports, optical	
• MM992-2 multimode, glass, up to 750 m	**6GK5 992-2AL00-8AA0**
• MM992-2LD single-mode, glass, up to 10 km	**6GK5 992-2AM00-8AA0**
• MM992-2LH single-mode, glass, up to 40 km	**6GK5 992-2AN00-8AA0**
• MM992-2LH+ single-mode, glass, up to 70 km	**6GK5 992-2AP00-8AA0**
• MM992-2ELH single-mode, glass, up to 120 km	**6GK5 992-2AQ00-8AA0**
with 2 x 100/1000 Mbit/s for SFP pluggable transceiver, optical	
• MM992-2SFP for SFP pluggable transceivers with 1 x 100 or 1 x 1000 Mbit/s multi-mode or single-mode, glass	**6GK5 992-2AS00-8AA0**

Ordering data	Order No.
SFP pluggable transceiver, optical	
with 1 x 100 Mbit/s LC port, optical	
• SFP991-1 multimode, glass, up to 5 km	**6GK5 991-1AD00-8AA0**
• SFP991-1LD single-mode, glass, up to 26 km	**6GK5 991-1AF00-8AA0**
• SFP991-1LH+ single-mode, glass, up to 70 km	**6GK5 991-1AE00-8AA0**
with 1 x 1000 Mbit/s LC port, optical	
• SFP992-1 multimode, glass, up to 750 m	**6GK5 992-1AL00-8AA0**
• SFP992-1LD single-mode, glass, up to 10 km	**6GK5 992-1AM00-8AA0**
• SFP992-1LH single-mode, glass, up to 40 km	**6GK5 992-1AN00-8AA0**
• SFP992-1LH+ single-mode, glass, up to 70 km	**6GK5 992-1AP00-8AA0**
• SFP992-1ELH single-mode, glass, up to 120 km	**6GK5 992-1AQ00-8AA0**
Accessories	
IE FC RJ45 Modular Outlet	
FastConnect Outlet RJ45 for Industrial Ethernet with interface for a replaceable insert	
• with insert 2FE; replaceable insert for 2 x 100 Mbit/s interfaces	**6GK1 901-1BE00-0AA1**
• with insert 1GE; replaceable insert for 1 x 1000 Mbit/s interfaces	**6GK1 901-1BE00-0AA2**
IE FC TP Standard Cable GP 2 x 2 (Type A)	**6XV1 840-2AH10**
4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/IE FC RJ45 Plug; PROFINET-compliant; with UL approval; sold by the meter; max. length 1000 m, minimum order 20 m	

Ordering data	Order No.
Accessories (continued)	
IE FC TP standard cable GP 4 x 2	**6XV1 870-2E**
8-core, shielded TP installation cable for connection to IE FC RJ45 Modular Outlet for universal application; with UL approval; sold by the meter; max quantity 1000 m, minimum order 20 m	
IE TP Cord RJ45/RJ45	
TP cable 4 x 2 with two RJ45 connectors	
• 0.5 m	**6XV1 870-3QE50**
• 1 m	**6XV1 870-3QH10**
• 2 m	**6XV1 870-3QH20**
• 6 m	**6XV1 870-3QH60**
• 10 m	**6XV1 870-3QN10**
IE FC RJ45 Plug 180	
RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; with 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface	
• 1 pack = 1 unit	**6GK1 901-1BB10-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB10-2AB0**
• 1 pack = 50 units	**6GK1 901-1BB10-2AE0**
IE FC RJ45 Plug 4 x 2	
RJ45 plug connector for Industrial Ethernet (10/100/1000 Mbit/s) with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface	
• 1 pack = 1 unit	**6GK1 901-1BB11-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB11-2AB0**
• 1 pack = 50 units	**6GK1 901-1BB11-2AE0**

More information

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular versions, the SIMATIC NET Selection Tool is available:

Function overview SCALANCE X-400 managed

2

■ Overview

The SCALANCE X-400 product range comprises modular Industrial Ethernet switches expandable by various media modules and partially by extenders. It supports 10/100/1000-Mbit technology for various transmission media (twisted pair, fiber optic) and increased port requirements. The main applications are high-performance plant networks (control level). Thanks to its partly modular design, the X-400 product line is also designed for future requirements and can be adapted to the relevant task.

- Two to four integral Gigabit Ethernet twisted pair interfaces (10/100/1000 Mbit/s) for connecting several switches to each other; node connection via the Fast Ethernet twisted pair ports (10/100 Mbit/s) integrated into the basic unit
- *SCALANCE X414-3E;*
  another eight nodes can be connected to the basic unit via extender modules;
  the following extender modules are available:
  - Extenders with eight Fast Ethernet twisted-pair ports
  - Extenders with four media module slots for up to eight Fast Ethernet fiber optic ports
- High-speed media redundancy through integral redundancy manager even for large networks, for both Gigabit Ethernet and Fast Ethernet
- For the construction of optical Gigabit Ethernet rings, the integrated Gigabit Ethernet ports can be converted to fiber optic via a 2-port Gigabit Ethernet media module (MM).
- By means of plug-in 2-port Fast Ethernet media modules for multimode or alternatively single-mode fiber-optic cable, SCALANCE X-400 switches can also be integrated into 100-Mbit/s rings, e.g. with SCALANCE X204-2.
  It is then possible to also provide an optical link to remote stations.
- Remote diagnostics by means of PROFINET diagnostics, CLI, Web browser or SNMP
- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standards: Establishment of virtual networks (VLANs)
- Integration into higher-level enterprise networks thanks to support for standardized redundancy procedures (Rapid Spanning Tree Protocol)
- Through learning the Multicast sources and targets (IGMP (**I**nternet **G**roup **M**anagement **P**rotocol snooping), SCALANCE X-400 switches can also filter Multicast data traffic and therefore limit the load in the network.
- Creation of IP subnets and IP router communication by means of Layer 3 switching (IP routing) on SCALANCE X414-3E
  - Static routing
  - Dynamic routing OSPF (Open Shortest Path First) and RIPv1/2 (Routing Information Protocol)
  - Redundant routing VRRP (Virtual Router Redundancy Protocol)

SCALANCE X-400 managed (Layer 3)

2

Benefits

g **e** **get** **Designed for Industry**

- Flexible configuration of electrical or optical Industrial Ethernet networks; the network topology, type and number of ports can be adapted easily to the structure of the plant.

- High availability of the network thanks to:
  - Redundant power supply
  - Redundant network structures based on fiber-optic or twisted pair cables (redundancy manager, standby function, RSTP and VRRP are integrated)
  - Replacement and extension of media and expansion modules during operation
  - Easy device replacement by means of plug-in C-PLUG swap medium

- Reliable communication thanks to very fast reconfiguration of the network in the event of a fault

- Simple fiber optic connection technology by means of SC sockets (Gigabit Ethernet), BFOC sockets (Fast Ethernet) and prefabricated fiber optic cables

- Twisted pair ports are readily accessible from the front, 10/100/1000 Mbit/s;
  ports with sleeve for rugged, industry-compatible station connection for direct connections up to 100 m in conjunction with the PROFINET-compatible IE FC RJ45 Plug 180 or IE FC RJ45 Plug 145 connector

- Easy network configuration without runtime calculation also for extremely large networks

- Simple monitoring and diagnosis by means of signaling contact, digital inputs, SNMP, Syslog and e-mail; PROFINET IO diagnostics

- Reduced engineering expenditure for PLC/HMI due to integration into the SIMATIC system fault message concept SFM

- Thanks to the integrated Layer 3 function (IP routing) – static, dynamic and redundant – of SCALANCE X414-3E, networks can be divided into different subnets

- Investment protection for existing networks due to
  - Effortless connection of existing 10 Mbit/s data terminals or network segments to Fast Ethernet networks with 100 Mbit/s
  - Increase in performance through load decoupling and data transfer rates of 100 Mbit/s and 1000 Mbit/s
  - Easy integration into existing network management infrastructures by means of SNMP

- Support of VLAN permits integration into Enterprise Security Policies

- Limiting of load on application of Multicast-based protocols (e.g. video transmission) through IGMP (**I**nternet **G**roup **M**anagement **P**rotocol) snooping or GMRP (**G**ARP **M**ulticast **R**egistration **P**rotocol)

- Protection of network against overload by setting of port thresholds

- Operating temperature range
  - *SCALANCE X414-3E:* -40 °C to + 70 °C
  - *SCALANCE X408-2:* 0 °C to + 60 °C

- Low-maintenance operation thanks to fanless construction

Application

SCALANCE X-400 products permit the configuration of switched networks at the control level, which not only demands high availability of the network and extensive diagnostic options, but also a high number of ports, high transfer rate and the support of fiber optic and twisted-pair transmission media. SCALANCE X-400 products are designed with degree of protection IP20 for installation in control cabinets.

SCALANCE X408-2

- Control stations with a low concentration of devices
- Star hub in plant bus for applications with low concentration of devices
- High-speed backbone including high-speed media redundancy for process control systems
- In the high-speed backbone for coupling Gigabit network topologies

SCALANCE X414-3E

- Control stations with a high concentration of devices
- Star hub in plant bus for applications with high concentration of devices
- High-speed backbone including high-speed media redundancy for process control systems
- SCALANCE X414-3E equipped with Layer 3 for IP routing (static, dynamic, redundant)

2

■ Design

SCALANCE X408-2/SCALANCE X414-3

Communication connections:

- Integral Gigabit Ethernet twisted pair ports (10/100/1000 Mbit/s, RJ45 sockets) for connecting SCALANCE X-400 switches together:
  - *SCALANCE X408-2:*
    4 Gigabit Ethernet twisted pair ports
  - *SCALANCE X414-3E:*
    2 Gigabit Ethernet twisted pair ports
- Integral Fast Ethernet twisted pair ports (10/100 Mbit/s, RJ45 sockets with securing collar) for node connection
  - *SCALANCE X408-2:*
    4 Fast Ethernet twisted pair ports
  - *SCALANCE X414-3E:*
    12 Fast Ethernet twisted pair ports
- The Gigabit Ethernet ports can be converted to fiber-optic connections with optical Gigabit Ethernet media modules

Only for *SCALANCE X408-2:*

- Two universal slots either for optical Fast Ethernet or Gigabit Ethernet media modules with two ports

Only for *SCALANCE X414-3E:*

- Two slots for optical Fast Ethernet media modules with two ports
- One extender interface for expansion by 8 Fast Ethernet ports (twisted pair or fiber optic, depending on extender version). In this way, a maximum configuration of two Gigabit Ethernet Ports (electrical or optical) and up to 24 Fast Ethernet Ports (of which between 2 and 12 can be optical) is possible. The installation width including extender is max. 19".

Interfaces

- Console port (serial interface) for on-site parameterization/ diagnostics, for firmware update;
- Slot for C-PLUG swap media for easy device replacement (included in scope of supply)
- Redundant 24 V DC supply; two feeds are available for protection against voltage failure
- One floating message output for simple display of faults

Only for *SCALANCE X414-3E:*

- Additional out-band Ethernet port for on-site parameterization/ diagnostics
- Eight floating inputs for recording digital status information such as signal contacts of PROFIBUS OLM or door contacts and forwarding via SCALANCE X-400 diagnostic paths (LED indicator, log table, trap or Email)

Extensive operating mode and status information is displayed via LEDs and selection pushbuttons.

SCALANCE X-400 media modules (MM)

SCALANCE X-400 switches can be equipped with 2-port media modules. Media modules are available for both multimode and single-mode optical fibers. They can be added or replaced during network operation. The operating temperature range is -40 to +70 °C. The SCALANCE X414-3E basic unit supports two optical Gigabit Ethernet ports and up to four additional optical Fast Ethernet ports.

On two media-module slots, SCALANCE X408-2 supports as many as four optical ports which can optionally be equipped with optical Gigabit Ethernet or Fast Ethernet media modules.

The following media modules are available:

- MM491-2;
  2 fiber optic ports (BFOC sockets) 100 Mbit/s for distances up to 5 km with multimode fiber-optic conductors
- MM491-2LD;
  two fiber optic ports (BFOC sockets) 100 Mbit/s for distances up to 26 km with single-mode fiber-optic conductors
- MM491-2LH+;
  two fiber optic ports (SC sockets) 100 Mbit/s for distances up to 70 km with single-mode fiber-optic conductors
- MM492-2;
  two fiber optic ports (SC sockets) 1 Gbit/s for distances up to 750 m with multimode fiber-optic conductors (when using SIMATIC NET FO cable 50/125µm)
- MM492-2LD;
  two fiber optic ports (SC sockets) 1 Gbit/s for distances up to 10 km with single-mode fiber-optic conductors
- MM492-2LH;
  two fiber optic ports (SC sockets) 1 Gbit/s for distances up to 40 km with single-mode fiber-optic conductors
- MM492-2LH+;
  two fiber optic ports (SC sockets) 1 Gbit/s for distances up to 70 km with single-mode fiber-optic conductors
- MM492-2ELH;
  two fiber-optic ports (SC sockets) 1 Gbit/s for distances up to 120 km with single-mode fiber-optic conductors

Plug-in media modules for Gigabit Ethernet convert the two Gigabit Ethernet twisted pair-ports included in the switch to optical mode. The Gigabit ports can then be used as either twisted-pair or fiber-optic ports. In the case of the SCALANCE X414-3E basic device, optical media modules for Fast Ethernet each generate two additional ports per slot.

■ **Design** (continued)

SCALANCE X-400 extender module (EM), only for SCALANCE X414-3E

An optional extender module with up to eight further Fast Ethernet ports can be mounted next to the expansion interface of the SCALANCE X414-3E. The operating temperature range is -40 to +70 °C.

Versions:

- EM495-8;
  with 8 twisted pair ports (RJ45 sockets with sleeves) 10/100 Mbit/s; this enables the 12 onboard Fast Ethernet twisted pair ports of the SCALANCE X414-3E to be expanded to a total of 20 ports.

- EM496-4;
  with a further four media module slots for Fast Ethernet media modules for up to 8 optical Fast Ethernet ports

The structure of the SCALANCE X-400 product line offers the following advantages:

- Simple user connection via twisted pair
- Gigabit Ethernet transfer rate between SCALANCE X-400 switches
- Fiber optic connection via fiber-optic media modules
- Reduced costs for spare parts inventories;
  Electrical and optical versions are covered by a basic unit and fiber-optic media modules

Possible applications of the media modules with SCALANCE X408-2

Possible applications of the media and extender modules with SCALANCE X 414-3

2

■ Function

- Increasing the network performance;
  by filtering the data traffic on the basis of the Ethernet (MAC) address of the data terminals, the local data traffic remains local; only data intended for users of another subnetwork are forwarded by the switch.

- Simple network configuration and network expansion;
  the switch saves the data received at the ports and forwards it automatically to the destination address. The limitation of the network expansion by collision detection (CSMA/CD procedure) terminates at the port.

- Limitation of the error propagation to the affected subnetwork;
  the SCALANCE X-400 switches only forward data with a valid checksum (CRC).

- Integration of existing subnetworks with 10 Mbit/s into Fast Ethernet networks with 100 Mbit/s;
  at the twisted-pair ports, the SCALANCE X-400 switch automatically recognizes the conductor pairs for transmission and reception (autocrossover), the data transfer rate of 10 or 100 Mbit/s, as well as full-duplex and half-duplex operation (autonegotiation).

- High-performance connection of SCALANCE X-400 switches with 1 Gbit/s;
  SCALANCE X-400 switches have two (X414-3E) or four (X408-2) Gigabit Ethernet ports for connecting the switches to each other.

- Integrated redundancy manager for constructing Fast Ethernet and Gigabit Ethernet ring topologies with high-speed media redundancy.

- High-speed standby redundancy;
  several network segments such as rings can be connected together redundantly with SCALANCE X-400 over the integrated standby function. Two X-400 switches are configured in a ring as a master and slave and are connected via two links to the other ring. In the case of SCALANCE X408-2 or SCALANCE X-300, a high-performance redundant coupling at 1000 Mbit/s is possible.

- Redundant interfacing to company networks;
  SCALANCE X-400 switches support the standardized redundancy procedures Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP). This enables a subnetwork to be connected redundantly to a higher level corporate network with reduced requirements for the reconfiguration time (in the order of seconds).

- Support of virtual networks (VLAN);
  for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks.

- Integrated hardware Layer 3 Switching function (IP routing, only SCALANCE X414-3E);
  IP subnetworks can be created and interconnected, e.g. automation network with office network, enabling a structuring of the networks

- Load limiting with use of Multicast protocols (e.g. video transmission);
  through learning the Multicast sources and targets (IGMP snooping), SCALANCE X-400 switches can also filter Multicast data traffic and therefore limit the load in the network.

- Time synchronization;
  diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK or SNTP time transmitter, thereby simplifying the assignment of diagnostic messages to several devices.

- Fast replacement of devices in event of failure, by means of the C-PLUG switching medium

Redundant coupling with an Office network and industrial network on Layer 2 and Layer 3

Network topology and network configuration

The network topology can easily be adapted to the structure of the plant with SCALANCE X-400 Industrial Ethernet switches. The following network structures and combinations of structures can be implemented:

- Fast Ethernet and Gigabit rings with fast media redundancy; to protect against failure of a transmission link or a switch, as many as 50 X-400 switches cascaded in line can be connected into a ring with a total length of up to 150 km using multi-mode or 6,000 km using single mode. On the failure of a transmission link or a SCALANCE X-400 switch in the ring, the transmission path is quickly reconfigured due to the media redundancy.

- Several rings can be redundantly linked through the standby function

- At the same time, SCALANCE X-400 supports redundant connection of the ring structure to the corporate network with Rapid Spanning Tree.

- Star topology with SCALANCE X-400 switches: The SCALANCE X-414-3E switch represents a star point which can interconnect as many as 26 nodes or subnetworks electrically or optically; SCALANCE X408-2 can connect up to 8 nodes or subnetworks

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 3000 m at 100 Mbit/s
  - 750 m at 1 Gbit/s

- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 70 km at 100 Mbit/s
  - 12 km at 1 Gbit/s

- Maximum length of installation cable:
  - 100 m at 100 Mbit/s with IE FC TP Cable 2 x 2 and IE FC Plug 180
  - Max. 90 m at 1 Gbit/s with IE FC TP Cable 4 x 2, IE FC RJ45 Modular Outlet and patch cable (10 m)
  - 100 m at 1000 Mbit/s with IE FC TP Cable 4 x 2 and IE FC Plug 4 x 2

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM; to establish a ring, a SCALANCE X-400 is switched to RM mode. The Gigabit ports (electrical or – with media module – optical) are preferably used as ring ports. When using in optical rings with 100 Mbit/s, the ring ports can be configured on one media module or on two media modules.

- Signal mask; the signal mask is set to the current status of the SCALANCE X-400 (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (10/100/1000 Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode

- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.

- A PC or a programming device can be directly connected via a serial interface or, with the X414-3E, also via an Ethernet interface (out-band port). Operation is carried out using commands (**C**ommand **L**ine **I**nterface (CLI)).

- Monitoring via the Industrial Ethernet network; the following possibilities are available:
  - Remote via standard browser (Web-based management): Selection of SCALANCE X-400 switches via the network from a PC with browser
  - Remote via SNMP V1, V2c, V3: Secure integration of SCALANCE X-400 switches via the network into a network management station
  - Remote via PROFINET IO diagnostics
  - Standard diagnostic alarms can be configured in an easy, familiar manner in STEP 7 and processed in SIMATIC. The engineering outlay is drastically reduced for the PLC and HMI through complete integration in the SIMATIC system error message concept SFM.

SCALANCE X-400 managed (Layer 3)

2

Function (continued)

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Fixed parameterization of the ports (data rates, half/full duplex)
- Parameterization of the VLANs and multicast services
- Parameterization of the standby connections for a redundant ring link
- Setting of Rapid Spanning Tree parameters
- Parameterization of the user administration of SNMP V1, V2c, V3:
- Output of statistics information

- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware or the configuration data via the network by a TFTP server
- Saving the configuration data or log table via the network on a TFTP server
- Only for SCALANCE X414-3E: Configuration of the IP routing function (static routing, dynamic routing, (OSPF, RIP v1/2) and redundant routing (VRRP))

If faults occur in the network, the SCALANCE X-400 switch can send error messages (traps) to a network management system or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE X-400 switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

Integration

Fault-tolerant system with SCALANCE X-400

2

■ Integration (continued)

Use of the SCALANCE X-400 switches in a process control system, e.g. PCS 7

In the control room, two SCALANCE X-400 switches are used on the terminal bus. With a higher number of stations, SCALANCE X414-3E switches can be used with extender modules. These are connected together to create an electrical ring with a transfer rate of 1000 Mbit/s. Several operator panels are provided and divided between the two switches, so that the system can still be operated if one switch fails. The terminal and plant buses are connected using redundant servers, and also using high-performance Gigabit plugs in the case of SCALANCE X408-2.

The plant bus is designed as an optical ring. It connects three plant sections with the servers:

- SCALANCE X-400 switches without extenders are used for connecting high-availability SIMATIC controllers (H-systems). On failure of an individual controller or switch, the plant section remains functional.
- One SCALANCE X414-3E with extender (high number of ports) is used for the star-format connection of controllers.

Industrial Ethernet Switches SCALANCE X-400		*Accessories*	
Modular Industrial Ethernet switches with integrated RJ45 ports for setting up electrical and/or optical Industrial Ethernet networks; integrated redundancy manager, IT functions (RSTP, VLAN, etc.), PROFINET IO Device, network management via SNMP and web server; incl. operating instructions, Industrial Ethernet network manual and configuration software on CD-ROM; C-PLUG included in the scope of delivery		**IE FC TP Standard Cable GP 2 x 2 (Type A)**	**6XV1 840-2AH10**
		4-core, shielded TP installation cable for connection to IE FC Outlet RJ45 / IE FC RJ45 Plug; PROFINET-compliant; with UL approval; <u>sold by the meter;</u> max. length 1000 m, minimum order 20 m	
• **SCALANCE X408-2**; 4 x 10/100/1000 Mbit/s and 4 x 10/100 Mbit/s RJ45 ports; 2 x Gigabit/Fast Ethernet media module slots	**6GK5 408-2FD00-2AA2**	**IE FC TP Standard Cable GP 4 x 2**	**6XV1 870-2E**
• **SCALANCE X414-3E**; 2 x 10/100/1000 Mbit/s and 12 x 10/100 Mbit/s RJ45 ports; 1 x Gigabit-Ethernet and 2 x Fast Ethernet media module slots; 1 x extender interface	**6GK5 414-3FC00-2AA2**	8-core, shielded TP installation cable for connection to IE FC RJ45 Modular Outlet for universal application; with UL approval; <u>sold by the meter;</u> max quantity 1000 m, minimum order 20 m	
MM491/MM492 media modules		**IE TP Cord RJ45/RJ45**	
Media modules with 2 ports; 1 Gbit/s		TP cable 4 x 2 with two RJ45 connectors	
MM492-2; 1000BaseSX, SC connection, multimode FOC up to 750 m	**6GK5 492-2AL00-8AA2**	• 0.5 m • 1 m • 2 m • 6 m • 10 m	6XV1 870-3QE50 6XV1 870-3QH10 6XV1 870-3QH20 6XV1 870-3QH60 6XV1 870-3QN10

• 1 pack = 10 units	6GK1 901-1BB11-2AB0
• 1 pack = 50 units	6GK1 901-1BB11-2AE0

FC BFOC Plug — 6GK1 900-1GB00-0AC0

Screw connector for on-site assembly on FC fiber-optic cable; (1 pack = 20 units + cleaning cloths)

FC SC plug — 6GK1 900-1LB00-0AC0

Screw connector for on-site assembly on FC fiber-optic cable; (1 pack = 10 duplex plugs + cleaning cloths)

IE FC Stripping Tool — 6GK1 901-1GA00

Preadjusted stripping tool for fast stripping of the Industrial Ethernet FC cables

FC FO termination kit — 6GK1 900-1GL00-0AA0

Assembly case for local assembly of FC SC and FC BFOC connectors to FC FO standard cable, comprising a stripping tool, Kevlar cutters, fiber breaking tool and microscope

IE FC RJ45 Modular Outlet

FastConnect RJ45 Outlet for Industrial Ethernet with interface for a replaceable insert;

	Order No.
• **With insert 2FE**; replaceable insert for 2 x 100 Mbit/s interfaces	6GK1 901-1BE00-0AA1
• **With insert 1GE**; replaceable insert for 1 x 1000 Mbit/s interfaces	6GK1 901-1BE00-0AA2

SITOP compact, 2.5 A — 6EP1 332-5BA00

Single-phase power supply with wide-range input 85 ... 264 V AC, regulated output voltage 24 V, output current rated value 2.5 A

Spare parts

CV490 cover set — 6GK5 490-0AA00-0AA2

consisting of covers for: 1 x Gbit submodule slot, 1 x 100 Mbit/s submodule slot, 3 x 10/100 Mbit/s TP slot

Label sheet — 6GK5 498-0AA00-0AA0

10 sheets DIN A4, color: petrol, 10 strips/sheet, pre-perforated for printing with laser printer 10 sheets per pack

4-pole and 5-pole terminal set — 6GK5 498-1AA00-0AA0

Straight, with locking lug

More information

To assist in selecting the right Industrial Ethernet switches as well as configuration of modular versions, the SIMATIC NET Selection Tool is available at:

Function overview SCALANCE X-500 managed

SCALANCE XR-500 managed (Layer 3)

Overview

The Layer 3-enabled SCALANCE XR-500 Industrial Ethernet switches are fully modular, high-performance, industry-standard switches for the construction of electrical and optical line, ring and star topologies with data transfer rates of up to 10 Gbit/s, designed for installation in 19" control cabinets.

- Four optical interfaces (10 Gbit/s) and up to 48 electrical and/or optical interfaces (10/100/1000 Mbit/s), of which up to 12 electrical PoE interfaces;
  up to twelve electrical and/or optical 4-port media modules can be plugged into the basic unit at any point.

- Fast media redundancy due to the integrated redundancy manager:
  Redundant connection of rings by means of high-speed media redundancy is also possible with SCALANCE XR-500.

- Seamless integration of automation networks into existing corporate networks thanks to support for a host of IT standard functions (VLANs, IGMP-Snooping/Querier, STP/RSTP/MSTP, Link Aggregation, Quality of Service, 802.1x and optional static routing, RIP, OSPF, VRRP for IPv4 and IPv6)

- Redundant integration into higher-level networks through support for standardized redundancy procedures (Multiple Spanning Tree Protocol, Spanning Tree Protocol, Rapid Reconfiguration Spanning Tree Protocol, Media Redundancy Protocol) and standardized IP routing protocols or procedures (Routing Information Protocol, Open Shortest Path First, Virtual Router Redundancy Protocol)

- PROFINET diagnostics, Web browser, CLI and SNMP

Benefits

g e get   Designed for Industry

- Unlimited flexibility during network expansions (e.g. more terminals, higher data transfer rates, PoE ports) or conversion (e.g. switching from copper to fiber-optic cable) and reduction of the storage costs due to the fully modular construction using SFPplus/SFP and media modules

- Retrofitting the Layer 3 switching functions (IP routing) by means of a license on KEY-PLUG (available soon) without replacing the existing hardware

- Changing the media modules during operation

- High availability of the network due to
  - redundant voltage feed
  - redundant network structures based on FOC or Twisted Pair (redundancy manager, standby function and STP/RSTP/MSTP integrated)
  - Easy device replacement by means of plug-in C-PLUG/ KEY-PLUG swap medium
  - very fast reconfiguration of the network in event of a fault

- Thanks to support for the Dual Stack Routing function, both IPv4 addressing and IPv6 addressing can be operated in one network

- High flexibility thanks to variable mounting options of the power supply unit, and choice between front or rear cable outlet on the device (depending on the device version)

Application

The SCALANCE XR-500 switches are ideal for use in industrial networks and for integrating the industrial network into an existing corporate network. From the control level to the management level, the switch handles the networking of plant sections as well as distributed field devices and ensures high plant availability with extensive diagnostics options and high transmission speeds. Thanks to the scalability of the basic unit and the optionally available Layer 3 switching function, the network can be established specially for the relevant application, or adapted and expanded at any time.

The SCALANCE XR-500 switches are suitable for establishing electrical and optical Industrial Ethernet line, star or ring topologies with four integral SFP+ slots that can be optionally equipped with SFP+ plug-in transceivers (10 Gbit/s) or SFP plug-in transceivers (1000 Mbit/s), and up to 12 media module slots that can be optionally equipped with electrical and/or optical 4-port media modules. Thanks to data transfer rates of up to 10 Gbit/s, the switches can be used as an Industrial Ethernet backbone switch and as a hub in the plant bus (redundant connection possible).

The use of media modules or SFP+/SFP enables the following:

- Extension of networks by subsequent insertion of additional media modules in unused media module slots

- Changing of cabling technology, e.g. conversion from copper to fiber-optic cables, or from multimode to singlemode FOC

- Changing of the data transfer rate, e.g. from 1000 Mbit/s to 10 Gbit/s

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

2

■ Design

The SCALANCE XR-500 Industrial Ethernet switches with rugged metal enclosure with IP20 degree of protection are optimized for installation in the 19" control cabinet. The power supply optimized for the 19" cabinet (85 to 264 V AC) for power supply to the SCALANCE XR-500 can either be installed directly at the rear of the SCALANCE XR-500 assembled or connected using connecting cables (installation of the power supply unit in a 19" rack). The data cable outlet of the SCALANCE XR-500 is located optionally either at the front or rear of the device (depending on the device version).

The switches have:

- 4-pole terminal block on the front for connecting the optionally available power supply unit (85 V to 264 V AC)
- 6-pin connector for assembly of the optionally available power supply unit (85 V to 264 V AC) on the rear
- 2-pole terminal block for connecting the isolated signaling contact for simple display of faults
- Row of LEDs for indicating status information (power, link status, data transfer, power supply, signal contact)
- SELECT/SET pushbutton for easy setting of the fault signaling contact on the device
- Slot on the side of the device for the C-PLUG swap medium for simple device replacement in the event of a fault, or the KEY-PLUG (available soon) for adding IP routing to the device functionality
- Console port (serial interface, RJ11 cable to RS232 (9-pin) included in scope of delivery) and management port (Ethernet interface) for on-site parameterization/diagnostics

The SCALANCE XR-500 switches are available with the following port types:

- Four SFP+ slots for optical SFP+ or SFP plug-in transceivers (multimode and singlemode connections)
  - The SFP+ plug-in transceivers support 10 Gbit/s
  - The SFP plug-in transceivers support 1000 Mbit/s
- Up to 12 slots for electrical 4-port media modules and electrical PoE 4-port media modules or optical 4-port media modules for multimode or singlemode connections; the optical media modules are available in various connection technologies
  - The RJ45 sockets are also available in industry-standard design with additional retaining collars for connection of the Industrial Ethernet FC RJ45 Plug 180
  - All electrical Ethernet interfaces support 10/100/1000 Mbit/s, all optical Ethernet interfaces support 100 or 1000 Mbit/s

XR552-12M — with basic power supply, bottom mounting

XR552-12M — with redundant power supply, bottom mounting

XR552-12M — with basic power supply, rear mounting

XR552-12M — with redundant power supply, rear mounting

Options for mounting a single/redundant power supply unit to SCALANCE XR552-12M

Product versions

SCALANCE XR552-12M

- LEDs and data cable outlet on the front
- Alternatively, LEDs on the front and data cable outlet at the rear (available soon)
- Connection of power supply unit at rear or above/below the switch
- Four SFP+ slots for equipping with 10 Gigabit Ethernet SFP+ plug-in transceivers or Gigabit SFP plug-in transceivers
- 12x 4-port media module slots

SCALANCE XR528-6M (available soon)

- LEDs and data cable outlet on the front
- Alternatively, LEDs on the front and data cable outlet at the rear (available soon)
- Connection of power supply unit at rear or above/below the switch
- Four SFP+ slots for equipping with 10 Gigabit Ethernet SFP+ plug-in transceivers or Gigabit SFP plug-in transceivers
- 6x 4-port media module slots

PROFINET/Industrial Ethernet
Industrial Ethernet switches / media converters

2

SCALANCE XR-500 managed (Layer 3)

■ **Function**

- Integrated redundancy manager for constructing ring topologies with up to 10 Gbit/s and high-speed media redundancy. By interconnecting the ends of an optical or electrical line to form a ring, reliable communication can be achieved. The redundancy manager (RM) integrated in the SCALANCE XR-500 switch monitors the function of the network. It recognizes the failure of a transmission link or of SCALANCE X switch in the ring and activates the substitute path within a maximum of 0.2 seconds.

- Redundant Layer 2 interfacing to company networks; SCALANCE XR-500 switches support the standardized redundancy procedures Multiple Spanning Tree Protocol (MSTP), Rapid Spanning Tree Protocol (RSTP), and Spanning Tree Protocol (STP). This enables a subnetwork to be connected redundantly to a higher-level corporate network with reduced requirements for the reconfiguration time (in the order of seconds).

- The Layer 3 switching functions[1] (optional) enable simple subdivision of large networks into smaller subnetworks with their own address space. Reasons for subdivision into subnetworks include separation of the Ethernet network to reduce the volume of traffic, separation of sensitive areas from the main network, and subdivision of the network into logical working groups.

- Redundant Layer 3 connection to corporate networks[1]; SCALANCE XR-500 switches support the standardized routing protocols Open Shortest Path First (OSPF) and Routing Information Protocol (RIP), and the standardized routing procedure Virtual Router Redundancy Protocol (VRRP). This means industrial, routed subnetworks can also be connected redundantly to a higher-level corporate network.

- Thanks to support for the Dual Stack Routing function, both IPv4 addressing and IPv6 addressing can be operated in one network.

- Support of virtual networks (VLAN); for structuring Industrial Ethernet networks with a fast growing number of users, a physically existing network can be divided into several virtual networks. Port-based, protocol-based and IP-based VLANs are available for selection.

- Load limiting when multicast protocols (e.g. video transmission) are used; through learning the multicast sources and targets (IGMP Snooping, IGMP Querier), SCALANCE XR-500 switches can also filter multicast data traffic and therefore limit the load in the network. Multicast and broadcast traffic can be limited.

- Time synchronization; diagnostic messages (log table entries, e-mails) are time-stamped. The local time is standardized throughout the network by means of synchronization with a SICLOCK time transmitter or SNTP/NTP server, thereby simplifying the assignment of diagnostic messages to several devices.

- Link aggregation (IEEE 802.3ad) for bundling data streams

- Quality of Service (IEEE 802.1p) for prioritization of network traffic

[1] Available soon

Increasing the transmission bandwidth by means of link aggregation

■ **Function** (continued)

Network topology and network configuration

The network topology can easily be adapted to the structure of the plant using SCALANCE XR-500 Industrial Ethernet switches .

The following network structures and combinations of structures can be implemented:

- Ethernet with fast media redundancy; to increase network availability, as many as 50 X-200, X-300, X-400 or X-500 switches cascaded in line can be connected into a ring.
- Several rings can be redundantly linked through the standby function
- Star topology with SCALANCE XR-500 switches: Each SCALANCE XR-500 switch represents a neutral point that can connect up to 52 nodes or subnets with each other electrically.

Use of SCALANCE XR-500 in redundant network topologies, e.g. with Rapid Spanning Tree Protocol (RSTP) and ring redundancy

SCALANCE XR-500 managed (Layer 3)

2

▌ Function (continued)

When configuring the network, it is necessary to observe the following boundary conditions:

- Maximum line length between two modules for multi-mode fiber-optic conductors:
  - 5 km at 100 Mbit/s
  - 750 m at 1000 Mbit/s
  - 300 m at 10 Gbit/s

- Maximum line length between two modules for single-mode fiber-optic conductors:
  - 26 to 70 km at 100 Mbit/s
  - 10 to 120 km at 1000 Mbit/s
  - 10 to 40 km at 10 Gbit/s

- Maximum cable length of the TP cable between two SCALANCE X switches:
  - Max. 100 m with IE FC Cable 2 x 2 and IE FC RJ45 Plug 180
  - Max. 100 m at 1 Gbit/s with IE FC Standard Cable 4 x 2 (90 m), IE FC RJ45 Modular Outlet and patch cable (10 m)
  - Max. 10 m using patches with TP Cord

Commissioning and diagnosis

Setting options on the device itself:

- Redundancy manager RM;
  to establish a ring, a SCALANCE XR-500 is switched to RM mode. The non-ring ports of the RM can be used freely for the connection of data terminals and networks. If the redundancy procedure MRP standardized by PROFINET is used, the RM is adjusted automatically.

- Signal mask;
  the signal mask is set to the current status of the SCALANCE XR-500 (setpoint) by pushbutton operation. The signal mask defines which ports and which power supplies are to be monitored. The signaling contact only reports an error when a monitored port or a monitored feeder fails (deviation of setpoint/actual status).

- IP address;
  the IP address is assigned via DHCP (**D**ynamic **H**ost **C**onfiguration **P**rotocol). If there is no corresponding server in the network, the IP address can be assigned using an enclosed software tool.

Diagnostic options on site:

- The following status information is displayed by LEDs on site:
  - Port status
  - Port mode (Mbit/s, full/half-duplex)
  - Status of the two power supplies
  - Signaling contact status
  - Signal mask (setpoint status)
  - RM mode
  - Standby mode

- The status of the signaling contact is routed externally by means of floating relay contacts. This enables, for example, the module to be monitored via an input module from a controller.

- Monitoring via the Industrial Ethernet network;
  the following possibilities are available:
  - Via standard browser (Web-based management): Selection of SCALANCE XR-500 switches via the network from a PC with browser
  - Via SNMP V1, V2c, V3: Secure integration of SCALANCE XR-500 switches via the network into a network management system, e.g. SINEMA Server
  - Via PROFINET IO diagnostics: PROFINET diagnostic alarms from SCALANCE XR-500 switches can be displayed using the relevant SIMATIC engineering tools and they can also be processed in the controller. The engineering outlay for the PLC and HMI have been drastically reduced due to the complete integration in the SIMATIC concept for system error messages.

Network management

The network management provides the following functions:

- Password-protected dial-up for "Administrator" (read and write authorization) and "User" (read only)
- Read-out of version and status information
- Setting the signal and standby mask and address information
- Fixed parameterization of the ports (data rates, half/full duplex)
- Setting of Spanning/Rapid/Multiple Spanning Tree parameters
- Parameterization of the web management services
- Security
  - Ports can be connected or disconnected
  - Port-based network access control according to IEEE 802.1x
  - Authentication in accordance with IEEE 802.1x
  - Support of Access Control List (ACL)
- Output of statistics information
- Diagnosis of data traffic by means of a parameterizable mirror port with a standard commercial network analyzer
- Loading of new firmware versions or of the configuration data via the network by a TFTP server or directly via HTTP/HTTPS using a Web browser
- Saving the configuration data or log table via the network on a TFTP server

If faults occur in the network, the SCALANCE XR-500 switch can independently send error messages (traps) to a network management system, such as SINEMA Server, or also e-mails to a predefined network administrator.

Remote monitoring (RMON) provides the following functions: The SCALANCE XR-500 switch can collect statistics information according to the RMON groups 1 through 4. These include, for example, fault statistics that are kept for each port. This information can be read out through web-based management in the statistics sub-area.

SCALANCE XR-500 Industrial Ethernet switches		*Accessories*	
Fully modular Layer 3-enabled Industrial Ethernet switches for establishing electrical and/or optical Industrial Ethernet networks; with data transfer rates up to 10 Gbit/s, designed for installation in 19" control cabinets		**FAN597-1** Replacement fan slide-in unit for SCALANCE XR552-12M	**6GK5 597-1AA00-8AA0**
SCALANCE XR552-12M		**FAN597-2** [1] Replacement fan slide-in unit for SCALANCE XR528-6M	**6GK5 597-2AA00-8AA0**
4 x integral 1/10 Gbit/s SFP+ slots for SFP or SFP+ plug-in trans-ceivers 12 x 10/100/1000 Mbit/s slots for 4-port media modules, electrical or optical		**KEY-PLUG X500 Layer 3** [1] Swap medium for expansion of the device functions with IP routing (Layer 3), for integration of configuration data and for easy replacement of SCALANCE X-500 in the event of a fault	**6GK5 905-0PA00**
• Data cable outlet at front • Data cable outlet at rear [1]	**6GK5 552-0AA00-2AR2** **6GK5 552-0AA00-2HR2**		
SCALANCE XR528-6M [1]		*Media modules*	See "Media modules for modular SCALANCE XR-500 managed"
4 x integral 1/10 Gbit/s SFP+ slots for SFP or SFP+ plug-in trans-ceivers 6 x 10/100/1000 Mbit/s slots for 4-port media modules, electrical or optical		*Power supply*	See "Power supply for modular SCALANCE XR-500 managed"
• Data cable outlet at front • Data cable outlet at rear	**6GK5 528-0AA00-2AR2** **6GK5 528-0AA00-2HR2**

2

Overview

- 4-port media modules for flexible, 4-port-granular equipping of SCALANCE X-500 Industrial Ethernet switches
- Electrical versions with RJ45 ports are available as well as optical versions with BFOC and SC ports for the use of multimode and singlemode fiber-optic cables
- A 4-port SFP media module permits the optional use of fiber-optic SFP plug-in transceivers (**S**mall **F**orm-Factor **P**luggable) with LC connection technology
- SFP+ and SFP plug-in transceivers for flexible equipping of the four integral SFP+ slots in SCALANCE X-500

Benefits

g e t **get** Designed for Industry

- Unlimited flexibility during network expansions (e.g. more terminal devices), conversion (e.g. switching from copper to fiber-optic cables), or performance enhancement (e.g. from Gigabit to 10 Gigabit) through modular construction using media modules and SFP+ or SFP plug-in transceivers
- Reduction of storage costs and maintenance overhead by focusing on a few basic device versions

Application

Use of media modules in the SCALANCE X-500 switches enables:

- Extension of networks by subsequent insertion of additional media modules in unused media module slots (possible during operation)
- Extension of networks by subsequent insertion of additional SFP+ or SFP plug-in transceivers in unused SFP+ slots (possible during operation)
- Changing of cabling technology (e.g. conversion from copper to fiber-optic cables, or from multimode to singlemode FOC)
- Change of the data transfer rate (e.g. conversion from SFP plug-in transceivers (1000 Mbit/s) to SFP+ plug-in transceivers (10 Gbit/s)

Design

Optical SFP+ pluggable transceivers (one port) are inserted into the device

Optical 4-port media modules are inserted into the device

SFP media modules (four SFP slots) are inserted into the device

Optical SFP pluggable transceivers (one port) are inserted into the SFP media module

Electrical 4-port media modules are inserted into the device

G_IK10_XX_10325

4-port media modules plugged into media module slot and SFP/SFP+ plug-in transceivers in SFP+ slots

Product versions of media modules

*Electrical media modules
with 4 x 10/100/1000 Mbit/s RJ45 ports*

- MM992-4CUC with retaining collar
- MM992-4CU without retaining collar

*Electrical media modules
with 4 x 10/100/1000 Mbit/s RJ45 ports and PoE*

- MM992-4PoEC with retaining collar (available soon)
- MM992-4PoE without retaining collar (available soon)

Optical media modules with 4 x 100 Mbit/s BFOC ports

- MM991-4
  multimode, glass, up to 5 km
- MM991-4LD
  singlemode, glass, up to 26 km

Optical media modules with 4 x 1000 Mbit/s SC ports

- MM992-4
  multimode, glass, up to 750 m
- MM992-4LD
  singlemode, glass, up to 10 km

*Optical media modules with 4 x 100/1000 Mbit/s
for SFP pluggable transceiver*

- MM992-4SFP
  for SFP plug-in transceivers with 1 x 100 Mbit/s or
  1 x 1000 Mbit/s multimode or singlemode, glass

Product versions of SFP pluggable transceivers

The SFP plug-in transceivers (**S**mall **F**orm-factor **P**luggable) can be used together with the SFP media module MM992-4SFP, and in the integral SFP+ slots of the SCALANCE X-500.

*Optical SFP pluggable transceivers
with 1 x 100 Mbit/s LC port*

- SFP991-1
  multimode, glass, up to 5 km
- SFP991-1LD
  singlemode, glass, up to 26 km
- SFP991-1LH+
  singlemode, glass, up to 70 km

*Optical SFP pluggable transceivers
with 1 x 1000 Mbit/s LC port*

- SFP992-1
  multimode, glass, up to 750 m
- SFP992-1LD
  singlemode, glass, up to 10 km
- SFP992-1LH
  singlemode, glass, up to 40 km
- SFP992-1LH+
  singlemode, glass, up to 70 km
- SFP992-1ELH
  singlemode, glass, up to 120 km

Product versions of SFP+ plug-in transceivers

The SFP+ plug-in transceivers (**S**mall **F**orm-factor **P**lug-in) can only be used in the integral SFP+ slots of the SCALANCE X-500.

Optical SFP+ plug-in transceivers with 1 x 10 Gbit/s LC ports

- SFP993-1
  multimode, glass, up to 300 m
- SFP993-1LD
  singlemode, glass, up to 10 km
- SFP993-1LH
  singlemode, glass, up to 40 km

SFP992-1LD[3][4]					1x LC			10 km
SFP992-1LH[3][4]					1x LC			40 km
SFP992-1LH+[3][4]					1x LC			70 km
SFP992-1ELH[3][4]					1x LC			120 km
SFPplus-Module[4]								
SFP993-1	1x LC							300 m
SFP993-1LD		1x LC						10 km
SFP993-1LH		1x LC						40 km

[1] With retaining collars
[2] The MM992-4SFP SFP slot module can accommodate up to four 1-port SFP modules
[3] Can only be plugged into an MM992-4SFP slot module
[4] Puggable in XR-500 SFPplus slots only

Accessories	
IE FC RJ45 Modular Outlet	
FastConnect Outlet RJ45 for Industrial Ethernet with interface for a replaceable insert	
• with insert 2FE ; replaceable insert for 2 x 100 Mbit/s interfaces	**6GK1 901-1BE00-0AA1**
• with insert 1GE; replaceable insert for 1 x 1000 Mbit/s interfaces	**6GK1 901-1BE00-0AA2**
IE FC TP Standard Cable GP 2 x 2 (Type A)	**6XV1 840-2AH10**
4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/IE FC RJ45 Plug; PROFINET-compliant; with UL approval; sold by the meter; max. length 1000 m, minimum order 20 m	
IE FC TP Standard Cable GP 4 x 2	**6XV1 870-2E**
8-core, shielded TP installation cable for connection to IE FC RJ45 Modular Outlet for universal application; with UL approval; sold by the meter; max quantity 1000 m, minimum order 20 m	
IE TP Cord RJ45/RJ45	
TP cable 4 x 2 with two RJ45 connectors	
• 0.5 m	**6XV1 870-3QE50**
• 1 m	**6XV1 870-3QH10**
• 2 m	**6XV1 870-3QH20**
• 6 m	**6XV1 870-3QH60**
• 10 m	**6XV1 870-3QN10**
IE FC RJ45 Plug 180	
RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; with 180° cable outlet; for network components and CPs/CPUs with Industrial Ethernet interface	
• 1 pack = 1 unit	**6GK1 901-1BB10-2AA0**
• 1 pack = 10 units	**6GK1 901-1BB10-2AB0**

Overview

- The 24 V PS598 power supply is designed for installation in 19" control cabinets or for direct mounting on SCALANCE XR-500 Industrial Ethernet switches; it has degree of protection IP20.
- 300 W output power at an input voltage range of 85 V to 264 V AC and an operating temperature of 0 °C to +60 °C

Design

- Non-heating apparatus socket for connecting to the AC network of 85 to 264 V AC (non-heating apparatus cable not included in the scope of delivery; can be ordered optionally on country-specific basis)
- Terminal block for universal supply of products with 24 V DC input
- Plug-in contact for direct connection on the rear of the SCALANCE XR-500 Industrial Ethernet switches (mounting kit included in scope of delivery of SCALANCE XR-500)
- Operating temperatures from 0 °C to +60 °C
- IP20 degree of protection
- Optimized for installation in 19" control cabinet or for direct mounting on SCALANCE XR-500 (SCALANCE XR-500 and power supply unit are mounted in the 19" control cabinet as a single unit)
- LEDs for indicating the status information (power, operating state)

Product versions

PS598-1 24 V power supply

- 300 W output power
- Input voltage range from 85 V to 264 V AC
- Output voltage 24 V DC
- Operating temperature from 0 °C to +60 °C
- IP20 degree of protection

Benefits

- Global use thanks to wide-range input (85 to 264 V AC)
- High reliability reliability since it is short-circuit proof, secure against no-load operation, and able to bridge short breaks in the mains power

Integration

Options for mounting a single/redundant power supply unit to SCALANCE XR552-12M

PROFINET/Industrial Ethernet

■ Technical specifications

Order No.	6GK5 598-1AA00-3AA0		Order No.	6GK5 598-1AA00-3AA0
Product type designation	POWER SUPPLY PS598-1		Product type designation	POWER SUPPLY PS598-1
Type of power supply	300 W, input: 85-264 V AC, output: 24 DC		Type of power supply	300 W, input: 85-264 V AC, output: 24 DC

Electrical data			Electrical data Closed-loop control	
Electrical data input			Relative control accuracy of the output voltage	
Curve shape of the voltage at the input	1-phase AC		• with fast fluctuation of the input voltage by typically +/- 15%	0.8%
Supply voltage			• with step change of the resistive load 50/100/50%, typically	3.25%
• With AC	85 … 264 V		Settling time	
• 1 for AC rated value	230 V		• with step change of load 50 to 100%, typically	2 ms
Design of the wide-range input	Yes		• with step change of load 100 to 50%, typically	2 ms
Overvoltage category	Category II (20 A rated branch circuit)		Electrical data Protection and monitoring	
Minimum stored energy time at rated value of the output current on power failure	16 ms		Design of the overvoltage protection at the output	< 37 V
Power frequency			Typical current limitation threshold	1.15 A
• 1 rated value	50 Hz		Property of the output, short-circuit-proof	Yes
• 2 rated value	60 Hz		Design of the short-circuit protection	Electronic shutdown, automatic restart
• Start value	47 Hz		Steady short-circuit current rms value, maximum	-
• End value	63 Hz		Electrical data Safety	
Input current at rated value of the input voltage 230 V rated value	1.8 A		Galvanic isolation between the input and output	Yes
Maximum limitation of the inrush current at 25 °C	40 A		Galvanic isolation	Safety extra low output voltage U_{out} according to EN 60950-1 and EN 50178
Design of the fuse at the input	replaceable		Equipment protection class	Class I
Electrical data output			Leakage current	
Curve shape of the voltage at the output	Controlled, isolated DC voltage		• Maximum	3 mA
Output voltage at DC rated value	24 V		• Typical	0.858 mA
Relative total tolerance of the voltage	2 %		**Mechanical data**	
Relative control accuracy of the output voltage			Design of electrical connection	
• with slow fluctuation of the input voltage	0.2%		• at the input	Non-heating apparatus plug
• with slow fluctuation of the resistive load	0.4%		• at the output	Can be plugged into basic unit or screw terminal in accordance with specification
Maximum residual ripple	0.36 V		Width	446 mm
Maximum voltage peak	0.24 V		Height	44 mm
Design of indicators for normal mode	Green LED for 24 V OK and error LED		Depth	140 mm
Behavior of the output voltage on switching on	Overshoot of Uout < 5%		Net weight	1.7 kg
Maximum startup delay	1.5 s		Product property of the enclosure: side-by-side enclosure	No
Maximum voltage rise time of the output voltage	15 ms		Type of mounting	
Output current			• 19-inch installation	Yes
• Rated value	12.5 A		• Wall mounting	No
• Rated range	0 … 12.5 A		• DIN rail mounting	No
Active power output, typical	300 W		• S7-300 rail mounting	No
Product property: parallel switching of channels	Yes		Type of mounting	Plugged into basic unit or rack-mounted
Number of resources switched in parallel to increase output	2			
Percentage efficiency	87%			
Effective power loss	39 W

PROFINET/Industrial Ethernet
Industrial Ethernet security

2

■ **Overview**

Protection of industrial networks with Industrial Security

Modern automation technology is based on communication and the trend toward increased networking of individual manufacturing islands. It is becoming more and more important to integrate all the manufacturing components into a uniform network that merges with the office network/corporate intranet and provides remote access options for service purposes. In this way, industrial communication interacts more and more with the IT environment and is now subjected to the same dangers that are well-known from the office and IT environment, such as hackers, viruses, worms and Trojans.

Different measures have to be taken to increase the security of industrial automation systems to specific levels. These range from the company organization and its guidelines regarding protective measures for PC and control systems through to protection of automation cells by segmenting the network. Siemens follows the cell protection concept and offers, with the SCALANCE S security modules as well as the communications processors (CPs) with integrated security functions (Security Integrated), components for setting up protected cells. With the cell protection concept, a plant network is subdivided into protected automation cells within which all devices are able to communicate with each other securely. The individual cells are connected to the overall network protected by a VPN and firewall.

Advantages of the cell protection concept:

- Protection from espionage and data manipulation
- Protection against overloading of the communication system
- Protection against mutual interference
- Protection against addressing mistakes
- Secure remote access also over the Internet
- No changes or modification of the existing network structure are necessary
- No changes or modification of the existing applications or network stations are necessary

Siemens offers technical solutions for industrial security in three different forms:

- *Standard security mechanisms,*
  e.g. encryption, password protection, and the option of deactivating interfaces and services: These functions are included as standard in the most diverse devices such as SIMATIC S7, SIMATIC HMI, SIMATIC NET communications processors and SCALANCE network components.

- *Specific security products*
  that handle security tasks exclusively: These are the SCALANCE S security modules and the SOFTNET Security Client VPN software.

- *Security Integrated,* [1]
  hardware components whose tasks are primarily in the area of communication, but which also provide the full security functionality from the area of firewall protection and VPN: this concerns communications processors for SIMATIC S7 (CP 343-1 Advanced and CP 443-1 Advanced) and PC (CP 1628) as well as UMTS router SCALANCE M875.

[1] Available soon

Overview

- Security modules for the protection of automation networks and security during data exchange between automation systems.
- Communication is only possible between authenticated and authorized devices
  - Protection against operator mistakes
  - Prevention of unauthorized access
  - Prevention of faults and communications overload
- Rugged, industry-standard station connections with PROFINET-compatible RJ45 connectors that offer additional strain relief and bending strain relief thanks to latching on the housing
- Easier handling thanks to minimal configuration and no special knowledge of IT security is required
- No modification or adaptation of the existing network structure, applications or stations is required
- Safeguarding of communication is independent of the protocol (e.g. PROFINET or other Ethernet-based fieldbus solutions)
- Remote access via the Internet possible without restrictions and with any providers

Benefits

get   Designed for Industry

- High level of IT security for machines and plants thanks to implementation of the cell protection concept
- System-wide network diagnostics thanks to integration into IT infrastructures and network management systems by means of SNMP
- Simple remote maintenance via the Internet by means of PPPoE and DynDNS using dynamic IP addresses
- Problem-free integration into existing networks without reconfiguring terminal nodes or setting up new IP subnetworks
- Module replacement without the need for a programming device, using the C-PLUG swap media for backing up the configuration data

SCALANCE S

■ Application

The security modules of the SCALANCE S range can be used to protect all devices of an Ethernet network against unauthorized access. In addition, SCALANCE S612 or SCALANCE S623 also protect the data transmission between devices or network segments (e.g. automation cells) against data manipulation and espionage; they can also be used for secure remote access over the Internet.

The security modules can be operated not only in bridge mode but also in router mode, and can thus also be used direct at IP subnetwork borders.

Secure remote access over the Internet or GPRS/UMTS is possible with the MD741-1 GPRS router and the SCALANCE M875 UMTS router.

SCALANCE S is optimized for use in automation and industrial environments, and meets the specific requirements of automation systems, such as easy upgrades of existing systems, simple installation and minimal downtimes in the event of a fault.

Product versions:

SCALANCE S602

- Uses the stateful inspection firewall to protect network segments against unauthorized access
- Connection via 10/100 Mbit/s ports

SCALANCE S612

- Uses the stateful inspection firewall to protect network segments against unauthorized access
- Protects up to 32 devices (128 available soon) using VPN tunnels (up to 64 VPN tunnels simultaneously, 128 available soon); this restriction applies only in bridge mode, not in routing mode
- Connection via 10/100 Mbit/s ports
- Connection via 10/100/1000 Mbit/s ports [1]

SCALANCE S623 [1]

- Uses the stateful inspection firewall to protect network segments against unauthorized access
- Protects up to 128 devices using VPN tunnels, (up to 128 VPN tunnels simultaneously); this restriction applies only in bridge mode, not in routing mode
- Connection via 10/100/1000 Mbit/s ports
- Additional RJ45 DMZ port (DMZ: "demilitarized zone") for secure connection from, for example, remote maintenance modems, laptops, or an additional network. This yellow port protected by firewalls from the red and green ports and can also terminate VPNs.

[1] Available soon

Connection of a local service PC/Internet access via the DMZ port of the SCALANCE S623

■ Design

SCALANCE S602

- 10/100/1000 Mbit/s ports for the connection and operation of SCALANCE S in Gigabit networks as well

- In addition to bridge mode, it can also be operated in router mode and can therefore also be used directly at IP subnet borders

- Address conversion
  - NAT (Network Address Translation) permits the use of private IP addresses in the internal network by converting public IP addresses into private ones
  - NAPT (Network Address and Port Translation) permits the use of private IP addresses in the internal network by converting frames to private IP addresses depending on the communications port used

- Internal network stations can receive their IP addresses from the integral DHCP server

- Log files can also be evaluated by the Syslog server

- Simple and fast configuration of the firewall through global firewall rules and symbolic names for IP addresses

- Enhanced integration in IT infrastructures and network management systems by means of SNMP

SCALANCE S612 and SCALANCE S623

As SCALANCE S602; additionally:

- Encryption of data transmission with VPN (IPSec)
  - Protection against espionage
  - Protection against unauthorized manipulation

- Secure remote access over the Internet, e.g. in conjunction with the SOFTNET Security Client and the MD741-1 GPRS router or the SCALANCE M875 UMTS router

■ Function

Security functions

VPN (Virtual Private Network)

(only for SCALANCE S612 and SCALANCE S623);
for reliable authentication (identification) of the network stations, for encrypting the data and checking data integrity.

- Authentication;
  All incoming data traffic is monitored and checked. As IP addresses can be falsified (IP spoofing), checking the IP address (of the client access) is not sufficient. In addition, Client PCs may have changing IP addresses. For this reason the authentication is performed by means of tried and tested VPN mechanisms.

- Data encryption;
  Secure encryption is necessary in order to protect data communication from espionage and unauthorized manipulation. This means that the data traffic remains incomprehensible to any eavesdropper in the network. The SCALANCE Security Module establishes VPN tunnels to other Security Modules for this purpose.

Firewall

Can be used as an alternative or to supplement VPN with flexible access control.
The firewall filters data packets and disables or enables communications links in accordance with the filter list (packet filter firewall). Both incoming and outgoing communication can be filtered, IP and MAC addresses, as well as communication protocols (ports).

- Logging;
  access data are saved by the Security Module in a log file. Detection of how, when and by whom it has been accessed is as important as detecting access attempts, to ensure that appropriate preventative measures can be taken.

Configuration

Configuring is simple to carry out even without special IT knowledge. Only the Security Modules or SOFTNET Security Clients that have to communicate with each other securely have to be created and configured. All the configuration data can be saved on the optional C-PLUG swap media (not included in scope of supply) so that the Security Module can be replaced quickly in the event of a fault and without the need of a programming device.

SOFTNET Security Client

2

Overview

- The SOFTNET Security Client is a component of the industrial security concept for protecting automation devices and for security during data exchange between automation systems.
- It is a VPN Client for programming devices, PCs and notebooks in industrial environments and it supports secure client access via LAN or even WAN (e.g. for remote maintenance via the Internet) to automation systems protected by devices with SCALANCE S functionality

- Data transmission is protected against operator error, eavesdropping/espionage and manipulation; communication can only take place between authenticated and authorized devices
- Use of field-proven IPsec mechanisms for setting up and operating VPNs.

Secure access to automation cells protected by devices with SCALANCE S functionality with the SOFTNET Security Client

Benefits

get   **get**   Designed for Industry

- Avoidance of system failures through exclusive access using approved programming devices or notebooks to automation devices or complete automation cells
- High flexibility when used on mobile PCs as no hardware is required for safeguarding the communication
- Standardized configuration and integrated security concept for the automation system using SCALANCE S and the SOFTNET Security Client without the need for specialized IT knowledge
- Protection of data transmission against spying and spoofing by means of certified standards.
- Considerable savings when used as remote control solution together with SCALANCE S compared to expensive service calls

PROFINET/Industrial Ethernet
Industrial Ethernet security

2

■ Application

The security modules of the SCALANCE S family are provided specially for use in automation, yet connect seamlessly with the security structures of the office and IT world. They offer security and meet the specific requirements of automation systems, such as easy upgrades of existing systems, simple installation and minimal downtimes in the event of a fault.

Depending on the respective security needs, various different security measures can be combined with one another. The SOFTNET Security Client allows programming devices, PCs and notebook computers access to protected network nodes or automation systems thanks to devices with SCALANCE S functionality (e.g. SCALANCE S, CP 1628 [1], CP 343-1 Advanced [1]).

[1] Available soon

Safe VPN communication between SCALANCE S, SOFTNET Security Client and components with Security Integrated

■ Function

Authentication

All incoming data traffic is monitored and checked.
As IP addresses can be falsified (IP spoofing), checking the IP address (of the client access) is not sufficient. In addition, Client PCs may have changing IP addresses. For this reason the authentication is performed by means of tried and tested VPN mechanisms.

Data encryption

Secure encryption is necessary to protect data communication from espionage and manipulation. This means that the data traffic remains incomprehensible to any eavesdropper in the network. To this end, the SOFTNET Security Client sets up VPN tunnels based on IPSec to other SCALANCE S security modules.

Performance data

System requirements (please note the descriptions under "Ordering data"):
Windows 7 Professional or Ultimate 32/64-bit
Windows XP Professional (32-bit) + SP3

Configuration

Using the associated configuration tool it is possible to handle setup and administration of security rules even without special IT knowledge. In the simplest case, only the SCALANCE S modules or SOFTNET security clients that are to communicate with one another are set up and configured. As soon as the SOFTNET Security Client knows the programmable controllers to be accessed, communication can be established.

Accessories *(continued)*

EGPRS-Router MD741-1

For wireless IP communication from Ethernet-based programmable controllers via GSM mobile radio networks; integrated firewall and VPN router (IPsec); quad band GSM; EGPRS Multislot Class 12

6NH9 741-1AA00

UMTS router SCALANCE M 875

UMTS router for wireless IP communication from Industrial Ethernet-based programmable controllers via UMTS/GSM mobile radio networks; EGPRS Multislot Class 12 with integrated firewall and VPN with IPsec; 2 x RJ45 ports, 2 x antenna connections

6GK5 875-0AA10-1AA2

ANT794-4MR antenna

Quad band antenna for MD720-3 and MD741-1, omnidirectional with 5 m cable

6NH9 860-1AA00

SINAMICS G120D
distributed frequency converters

Overview

Example: SINAMICS G120D, size FSA, comprising
power module PM250D and fail-safe control unit CU240D PN-F

The new distributed frequency converter series
SINAMICS G120D is the solution for demanding drive applica-
tions, particularly in the field of conveyor applications.
SINAMICS G120D permits continuous speed control of three-
phase asynchronous motors and meets all requirements of
conveyor applications from simple frequency control to
demanding vector control. With its sophisticated modular
design and IP65 degree of protection it slots into the system
seamlessly, thereby permitting high system availability and low
stock levels. The innovative regenerative power section concept
helps to save energy. Globally unique safety functions permit
improved system concepts and higher productivity. This drive
can be optimally linked into the Siemens TIA automation world
using PROFIBUS or PROFINET.

With its various device designs (sizes FSA to FSC) in the
performance range from 0.75 kW to 7.5 kW, it is suitable for
numerous drive solutions.

Reasons for distributed drive technology

- Modular drive solutions – and thus standardized mechatronic
  elements that can be tested individually
- Control cabinets are dispensed with, meaning that less space
  and cooling are required
- Long motor cables are dispensed with between converter and
  motor (less power loss, lower interference emissions and
  lower costs for shielded cables and additional filters)
- For conveyor applications with their large spatial range (e.g.
  in the automotive and logistics industries), the distributed
  installation methods bring great benefits

Modular design

SINAMICS G120D is a modular converter system with IP65
degree of protection and made up of various functional units.
The main ones are:

- Control unit (CU)
- Power module (PM)

The control unit controls and monitors the power module and
the connected motor in several selectable control types.
The digital inputs and digital outputs on the device permit the
simple wiring of sensors and actuators directly to the drive. The
input signals can either be connected directly within the control
unit and trigger autonomous local reactions, or they are passed
to a central control system via PROFIBUS or PROFINET where
they are processed in the context of the system as a whole.

The power module supplies the motor in a performance range
from 0.75 kW to 7.5 kW. The power module is controlled by
microprocessor from the control unit. For extremely reliable and
flexible motor operation, the latest IGBT technology with pulse
width modulation is used. Comprehensive protection functions
provide a high degree of protection for the power module and
motor. The unusually flat mechanical design is optimized for use
direct in the system. Furthermore, the power module has the
same hole dimensions for all powers (constant "footprint").

Safety Integrated

Versions of the distributed SINAMICS G120D frequency
converters are available for safety-related applications.
All power modules are already prepared for Safety Integrated.
If a power module is combined with a corresponding fail-safe
control unit, this drive becomes a Safety Integrated drive.

The fail-safe frequency converter SINAMICS G120D offers three
safety functions, certified according to EN 954-1, Category 3
and IEC 61508 SIL 2:

- Safe torque off (STO) to guard against any active movement
  of the operating mechanism
- Safe stop 1 (SS1) for continuous monitoring of a safe brake
  ramp
- Safely limited speed (SLS) to guard against danger from
  movements caused when a limit speed is exceeded

Both the "Safe Stop 1" function and the "Safely Limited Speed"
function operate without motor sensor or encoder; the imple-
mentation cost is minimal. Existing systems in particular can be
retrofitted with safety technology without the motor or mechanics
having to be modified.

The "Safely Limited Speed" and "Safe Stop 1" safety functions are
certified for asynchronous motors without sensors – these safety
functions are not approved for drawing loads such as lifting
devices and unwinders.

Further information can be found in Chapter Highlights, Section
Safety Integrated in Catalog D 31.

Efficient Infeed Technology

The innovative Efficient Infeed Technology is used in the
PM250D power modules. It is thus possible to feed the
generated energy back into the supply network using standard
converters with the motor in generator mode. Energy is saved
and, at the same time, ongoing operating costs are noticeably
reduced.

Further information can be found in Chapter Highlights, Section
Efficient Infeed Technology in Catalog D 31.

STARTER commissioning tool

The STARTER commissioning tool (from STARTER Version 4.1,
SP1) makes the commissioning and maintenance of
SINAMICS G120D easier. It offers operator prompting for quick
and easy commissioning, combined with user-friendly and
comprehensive functions for the drive solution.

2

Benefits

- Compact, space-saving design with very flat shape and uniform hole dimensions for all types of power rating

- Wide performance range from 0.75 kW to 7.5 kW

- The safety functionalities mean less cost in the integration of drives in safety-related machines or systems

- Thanks to the innovative switching concept (bidirectional input rectifier with "slim" link), the kinetic energy of a load can be fed back into the network. This regenerative capability means that enormous energy savings are possible, since regenerated energy no longer needs to be converted into heat in a braking resistor. Braking resistors and reactors are superfluous – this is particularly beneficial with regard to the space required and the installation cost at the high degree of protection IP65

- Increased robustness and longer service life due to painting of the electronics assemblies

- Flexibility thanks to modularity for a future-proof distributed drive concept with a high degree of protection IP65
  - Hot swapping possible
  - Easy replacement means excellent ease of maintenance

- Communication is possible via PROFINET or PROFIBUS with PROFIdrive Profile 4.0
  - Reduction of interfaces
  - System-wide engineering
  - Simple handling

- Thanks to the option of the direct connection of up to six sensors and up to two actuators to the control unit, almost all drive-related information can be managed directly; a local pre-processing of the signals relieves the field bus whilst ensuring a rapid and reproducible response time

- Integrated EMC filters of Class A (according to EN 55011), integrated brake control (1 AC 400 V rectified, corresponds to 180 V DC) and integrated motor protection thanks to thermal motor model and evaluation of temperature sensors PTC or KTY 84

- Software parameters for simple adaptation to 50 Hz or 60 Hz motors (IEC or NEMA motors)

- Simple device replacement and time-saving copying of parameters thanks to the optional MMC memory card

- Engineering and commissioning with uniform engineering tools such as SIZER (from Version 2.9), STARTER (from Version 4.1, SP1) and Drive ES: ensure quick configuration and simple commissioning – STARTER is integrated into STEP 7 with Drive ES Basic, with the benefit of central data storage and consistent communication

- Certified worldwide according to CE, UL, cUL, c-tick and Safety Integrated according to EN 954-1, Category 3 and IEC 61508 SIL 2

Application

SINAMICS G120D is perfectly suited for demanding conveyor applications in an industrial environment in which a distributed communication-capable drive is required. This applies in particular for the automotive industry, e.g. assembly lines.

Furthermore, SINAMICS G120D is suitable for many other high-performance applications, e.g. in the airports sector, in the food/luxury food industry (without surfactants) and in distribution logistics (e.g. electrical monorail systems).

Design

The SINAMICS G120D distributed frequency converter is a modular frequency converter for standard drives. Every SINAMICS G120D consists of two operational units: a power module and a control unit.

Power module PM250D with mains and motor connection and control unit CU240D

2

■ **Design** (continued)

Power modules

The following power modules are available for the distributed SINAMICS G120D frequency converters:

PM250D 0.75 kW to 7.5 kW power modules

The PM250D power modules have an innovative switching concept which permits line-commutated power recovery. This innovation allows regenerated energy to be fed back into the electricity network, thus saving energy.

Accessories

Connector sets for the mains supply and motor feeder, as well as preassembled motor cables for the connection to the motor can be ordered as accessories.

Control units

The following control units are available for the distributed SINAMICS G120D frequency converters:

CU240D control units

The converter is controlled by the control unit. In addition to control, other functions are available which can be adapted to the application in question by suitable parameterization. The following control units are available for the PROFINET connection:

- CU240D PN
- CU240D PN-F
- CU240D PN-F PP

Accessories

- MMC memory card

The parameterization of a converter can be saved on the MMC memory card. For service purposes, e.g. after replacement of a converter and retrieval of data from the memory card, the system is ready for use again immediately. The slot in question can be found on the back of the control unit to the side.

- RS232 interface cable for communication with a PC

For the control and commissioning of a converter direct from a PC if the relevant software is installed (commissioning tool STARTER, from Version 4.1, SP1).

- Spare parts kit

For replacement purposes, a spare parts kit is available, consisting of small parts such as seals, covers, PROFIBUS address windows and screws.

- Connection cable

Flexible connecting cables for data transmission between Industrial Ethernet participants or PROFIBUS participants, and for power supply to the control unit.

■ **Technical specifications**

The following technical specifications apply, if not expressly stated, for all components of the distributed SINAMICS G120D frequency converter listed here.

Product designation	SINAMICS G120D
Mechanical specifications	
Vibratory load	
• Transport [1]	EN 60068-2-6 5 … 9 Hz: constant deflection 3.1 mm 9 … 200 Hz: constant acceleration = 9.81 m/s² (1 *g*)
• Operation	EN 60068-2-6 10 … 58 Hz: constant deflection 0.15 mm 58 … 200 Hz: constant acceleration = 19.62 m/s² (2 *g*)
Shock load	
• Transport [1]	EN 60068-2-27 147.15 m/s² (15 *g*)/11 ms; 3 shock loads in each axis and direction
• Operation	EN 60068-2-27 147.15 m/s² (15 *g*)/11 ms; 3 shock loads in each axis and direction
Ambient conditions	
Protection class	Class III (PELV) according to EN 61800-5-1
Touch protection	Class I (with protective conductor system) according to EN 61800-5-1
Permitted ambient and coolant temperature (air) for power modules during operation	-10 … +40 °C without derating, > 40 … 55 °C see derating characteristic curves
Permitted ambient and coolant temperature (air) for control units during operation	-10 … +55 °C with CU240D DP-F or CU240D PN-F: 0 … 40 °C up to 2000 m above sea level

[1] In transport packaging.

[2] For further general information see also SINAMICS G110, Section Technical Specifications, Conformity with Standards.

[3] With shielded motor cable up to 15 m.

Product designation	SINAMICS G120D
Climatic ambient conditions	
• Storage [1]	EN 60068-2-1 temperature -40 … +70 °C
• Transport [1]	EN 60068-2-1 temperature -40 … +70 °C max. air humidity 95 % at 40 °C
• Operation	EN 60068-2-2 temperature -10 … +40 °C without derating
Environment class/chemical pollutants	
• Operation	Class 3C2 according to EN 60721-3-3
Pollution degree	2 according to EN 61800-5-1
Standards	
Conformity with standards	UL, cUL, CE, c-tick
CE marking	According to Low-Voltage Directive 73/23/EEC and Machinery Directive 98/37/EU
EMC Directive [2]	
• Sizes FSA to FSC with integrated Class A line filter	Category C2 [3] according to EN 61800-3 (corresponds with Class A according to EN 55011)

Note:

The EMC product standard EN 61800-3 does not relate directly to a frequency converter, but to a PDS (power drive system) which, in addition to the converter, includes the entire circuitry as well as motor and cables. The frequency converters alone are not generally subject to mandatory labelling according to the EMC Directive.

■ **More information**

Further information on the technical specifications and ordering data can be found in the Catalog D 31
"Standard Converter SINAMICS G110/G120 and
Distributed Converter SINAMICS G120D"
and in the interactive catalog under
"Drive Technology/AC Converter/Low-Voltage Converter"
for standard converter SINAMICS G110/G120 or
"Drive Technology/Distributed Drive Technology"
for Distributed Converter SINAMICS G120D.

■ **Overview**

2

Example CU240D PN-F control unit

The converter is controlled by the control unit. In addition to control, other functions are available which can be adapted to the application in question by suitable parameterization. The following control units are available for the PROFINET connection:

- CU240D PN
- CU240D PN-F
- CU240D PN-F PP

Safety Integrated functions

The fail-safe frequency converter SINAMICS G120D offers three safety functions, certified according to EN 954-1, Category 3 and IEC 61508 SIL 2:

- Safe torque off (STO) to guard against any active movement of the operating mechanism
- Safe stop 1 (SS1) for continuous monitoring of a safe brake ramp
- Safely limited speed (SLS) to guard against danger from movements caused when a limit speed is exceeded

Both the "Safe Stop 1" function and the "Safely Limited Speed" function operate without motor sensor or encoder; the implementation cost is minimal. Existing systems in particular can be retrofitted with safety technology without the motor or mechanics having to be modified.

The "Safely Limited Speed" and "Safe Stop 1" safety functions are certified for asynchronous motors without sensors – these safety functions are not approved for drawing loads such as lifting devices and unwinders.

Note:
Further information can be found in Chapter Highlights, Section Safety Integrated in Catalog D 31.

Selection and ordering data

Communication	Digital inputs	Digital outputs	Sensor interfaces	Designation	Control unit Order No.

■ **Overview**

SINAMICS S110 – the basic positioning drive for single-axis applications

SINAMICS S110: PM340 Power Module in blocksize format
with CU305 Control Unit and BOP20

SINAMICS S110 can be used in numerous applications.
Typical examples are:

- Handling devices
- Feed and withdrawal devices
- Stacking units
- Automatic assembly machines
- Laboratory automation
- Metalworking
- Woodworking, glass and ceramic industries
- Printing machines
- Plastics processing machines

The SINAMICS S110 servo converter is designed for connection to both synchronous servomotors and induction motors.
It supports all the most popular types of encoder.

A variety of fieldbus interfaces are provided for linking the unit to a higher-level control system. Alternatively, it can be controlled via ±10 V and a pulse direction interface.

The so-called basic positioner (EPos) is an integral component of SINAMICS S110. It provides a simple method of solving positioning tasks.

Flexible in application

SINAMICS S110 is a flexible, versatile system.

Synchronous servomotors and induction motors with outputs up to 90 kW can be used to implement rotary or linear axes. DRIVE-CLiQ motors can be connected simply by means of the integrated DRIVE-CLiQ interface. This means that the electronic rating plate of the motor is easy to read out, reducing the engineering time and cost involved in commissioning the drive.

Furthermore, SINAMICS S110 features an integrated encoder interface for optional use. It can be used to evaluate HTL/TTL and SSI encoders.

In addition to pure point-to-point positioning, SINAMICS S110 naturally also offers on-the-fly changeover from continuous operation to positioning mode in order, for example, to precisely position objects transported randomly on a conveyor belt. Even simple traversing profiles with different motion cycles and wait times can be executed automatically by SINAMICS S110.

The CU305 Control Unit of the SINAMICS S110 is equipped with an integrated communication interface for linking the converter to an automation system. A PROFINET, PROFIBUS or CANopen interface can be ordered. Standardized protocols for linking to a higher-level control are supported – the PROFIdrive profile for positioning mode and the PROFIsafe profile for safety-related communication.

The converter is thus perfectly coordinated with the SIMATIC S7 automation system. The devices are linked by means of PROFIBUS and the SIMATIC S7 uses standard function blocks to communicate with the drive. In addition, the STARTER commissioning tool can be seamlessly integrated into STEP 7, the SIMATIC's programming software.

BICO technology

Every drive contains a large number of input and output variables which can be freely and independently interconnected using Binector Connector technology (BICO). A binector is a logic signal which can assume the value 0 or 1. A connector is a numerical value, e.g. the actual speed or current setpoint.

Free function blocks

The "free function blocks" integrated in the CU305 Control Unit can be adapted easily but precisely to a very broad range of customized requirements. The available range of blocks includes simple logic blocks such as AND/OR elements, as well as more complex devices such as ramp-function generators, smoothing elements or limit-value monitors. All blocks can be flexibly interconnected using BICO (Binector-Connector) technology, ensuring that signals are processed quickly and close to the drive which helps reduce the load on the higher-level control.

Diagnostics optimally supported by trace function

The time characteristics of input and output variables associated with drives can be measured by the integrated trace function and displayed using the STARTER commissioning tool. Up to 4 signals can be recorded simultaneously. Recording can be triggered as a function of freely selectable boundary conditions, e.g. the value of an input or output variable.

■ **Overview** (continued)

Safety Integrated

The integrated safety functions of SINAMICS S110 provide highly effective application-oriented protection for personnel and machinery (terms as defined in IEC 61800-5-2).

The following Safety Integrated <u>Basic</u> functions are included as standard:

- Safe Torque Off (STO)
- Safe Brake Control (SBC)
- Safe Stop 1 (SS1)

The following are optionally available Safety Integrated <u>Extended</u> functions

- Safe Stop 2 (SS2)
- Safe Operating Stop (SOS)
- Safely Limited Speed (SLS)
- Safe Speed Monitor (SSM)
- Safe Direction (SDI)

The Safety Integrated functions are fully integrated into the drive system. They can be activated via fail-safe digital inputs on the CU305 Control Unit or over PROFINET or PROFIBUS with PROFIsafe.

The Safety Integrated functions are implemented electronically and therefore offer short response times in comparison to solutions with externally implemented monitoring functions.

Accessories

Memory cards

The SINAMICS Micro Memory Card (MMC) can be optionally used for SINAMICS S110. The relevant slot is located underneath the CU305 Control Unit. On the memory card, the complete functionality of SINAMICS S110 can be saved: the parameter settings and the firmware. When service is required, e.g. after the converter has been replaced and the data have been downloaded from the memory card, the drive system is immediately ready for use again.

A SINAMICS Micro Memory Card (MMC) is essential when the optional Safety Integrated Extended functions are used. The necessary license is saved on the MMC.

Intelligent Operator Panel (IOP)

The IOP supports both entry-level personnel and drive experts. Thanks to the large plain text display, the menu prompting and the application wizards, it is easy to commission, diagnose and locally control standard drives.

The IOP can be connected to the RS232 of the CU305 Control Unit using the appropriate connecting cable. Mounting the IOP directly on the CU305 Control Unit is not possible.

Coated modules

The following units are equipped as standard with coated or partially coated modules:

- Blocksize format units
- Control Units
- Sensor Modules

The coating on the modules protects the sensitive SMD components against corrosive gases, chemically active dust and moisture.

PROFINET/Industrial Ethernet

SINAMICS S110 servo converters
CU305 Control Unit

2

■ Overview

CU305 PN Control Unit

The CU305 Control Unit for the communication and open-loop/closed-loop control functions of a SINAMICS S110 is combined with the PM340 Power Module to create a powerful single drive.

■ Design

The CU305 Control Unit features the following connections and interfaces as standard:

- Fieldbus interface
  - CU305 PN: 1 PROFINET interface with 2 ports (RJ45 sockets) with PROFIdrive V4 profile
  - CU305 DP: 1 PROFIBUS interface with PROFIdrive V4 profile
  - CU305 CAN: 1 CANopen interface with DS301 V4.0, DSP402 V2.0, DR303-3 V1.0 profile
- 1 DRIVE-CLiQ socket, used solely to connect a DRIVE-CLiQ motor or a Sensor Module
- 1 onboard encoder evaluation for evaluating the following encoder signals
  - Incremental encoder TTL/HTL
  - SSI encoder without incremental signals
- 1 PE/protective conductor connection
- 1 connection for the electronics power supply via the 24 V DC power supply connector
- 1 temperature sensor input (KTY84-130 or PTC)
- 3 parameterizable, fail-safe digital inputs (floating) or alternatively 6 parameterizable digital inputs (floating)
- 5 parameterizable digital inputs (floating)
- 1 parameterizable, fail-safe digital output (floating) or alternatively 1 digital output (floating)
- 4 parameterizable bidirectional digital inputs/outputs (floating)
- 1 analog input: ±10 V, ±12 bit resolution
- 1 serial RS232 interface
- 1 slot for the memory card on which the firmware, parameters and licenses can be stored
- 1 PM-IF interface for communication with the PM340 Power Modules in blocksize format
- 2 test sockets and one reference ground for commissioning support
- 1 interface to the BOP20 Basic Operator Panel

■ Integration

The CU305 Control Unit controls the PM340 Power Module via the PM-IF interface.

A BOP20 Basic Operator Panel can also be snapped directly onto the CU305 for diagnostic purposes. For comprehensive diagnostics and commissioning functions, an Intelligent Operator Panel (IOP) can be connected to the RS232 interface.

DRIVE-CLiQ motors or Sensor Modules (SMC) can also be connected to the integrated DRIVE-CLiQ socket to permit the operation of motors without a DRIVE-CLiQ interface.

The status of the CU305 is indicated via multi-color LEDs.

The CU305 can be operated optionally with a memory card. The firmware and project data are stored on the plug-in card underneath, so that the CU305 can be replaced without the support of software tools. This memory card can also be used to perform standard commissioning on multiple drives of identical type. The card is available as an empty memory card or containing the latest drive firmware version. The card also contains the safety license for the extended safety functions. To use these extended safety functions, a memory card containing the safety license must be permanently inserted.

The CU305 and other connected components are commissioned and diagnosed with the STARTER commissioning tool.

■ **Overview**

The SINAMICS S120 drive system can be perfectly adapted to a wide range of different drive tasks thanks to its modular design. The drives and the line supply/regenerative feedback are computed on the Control Unit. Power units (Power Modules, Line Modules and Motor Modules) ensure an optimum conversion of energy between the supply system and motor. SINAMICS S120 is available in blocksize, booksize, booksize compact and chassis format and offers optimum solutions both for simple single-axis drives as well as for complex multi-axis drives.

SINAMICS S120 can be used in a wide range of applications, such as:

- Turning, milling and grinding machines
- Packaging machines
- Machines for producing food and beverages
- Printing and paper machines
- Textile machines
- Plastics processing machines
- Presses and punches
- Machines used in the timber, glass, and ceramics industry
- Assembly and testing equipment
- Handling devices
- Rolling mill drives
- Vehicle and gearbox test stands
- Hoisting gear, cranes
- Plants and processing lines
- Test bays
- Renewable energy

SINAMICS S120 single-axis drives (AC/AC)

The simplest version of a SINAMICS S120 is a single-axis drive. It consists of a CU310-2 Control Unit and a Power Module. A mains rectifier, a voltage-source DC link and an inverter for supplying the motor are integrated in the Power Module.

PM340 Power Module in blocksize format with CU310-2 PN Control Unit

SINAMICS S120 Power Modules are single drives without regenerative feedback into the mains supply. Generated energy produced during braking is converted to heat via braking resistors. Power Modules for SINAMICS S120 are available in the following formats and power ranges:

Format	Rated current (type rating)
Blocksize	0.9 ... 178 A (0.12 ... 90 kW)
Chassis	210 ... 490 A (110 ... 250 kW)

SINAMICS S120 drive system

Overview (continued)

SINAMICS S120 multi-axis drives:

A multi-axis drive consists of a Line Module, several Motor Modules and a Control Unit. The Line Module generates a DC voltage from the line voltage and supplies the Motor Modules with energy via the DC link. In the Motor Modules, the DC link voltage is converted by an inverter into an AC voltage for feeding the motor. On the shared Control Unit, both the line supply/regenerative feedback and the closed-loop control of the motors are computed. The connection between the Control Unit and the power units is made very simply using the digital system interface DRIVE-CLiQ.

CU320-2 Control Unit, Line Module and 3 Motor Modules in booksize format

SINAMICS S120 multi-axis drives are available in various cooling methods (internal air cooling, external air cooling, cold plate cooling and liquid cooling) and in the following formats and output ranges:

Format	Rated power or rated current (type rating)
Line Modules	
Booksize Compact	16 kW
Booksize	5 ... 120 kW
Chassis	132 ... 1400 kW
Motor Modules	
Booksize Compact	3 ... 18 A (1.6 ... 9.7 kW)
Booksize	3 ... 200 A (1.6 ... 107 kW)
Chassis	210 ... 1405 A (110 ... 1200 kW)

The SINAMICS S120 multi-axis drives are often used together with a higher-level controller for motion control (SIMOTION, SINUMERIK). For this reason, the following catalogs contain a detailed description of SINAMICS S120 multi-axis drives together with the perfectly matched servo, torque and linear motors including the associated cables and connections and the higher-level controllers for motion control:

- Catalog PM 21 SIMOTION, SINAMICS S120 and Motors for Production Machines
- Catalog NC 61 SINUMERIK & SINAMICS, Equipment for Machine Tools

Block diagram with CU320-2 Control Unit, Line Module and 2 Motor Modules

Overview

CU310-2 PN Control Unit

The CU310-2 Control Unit for the communication and open-loop/closed-loop control functions of a SINAMICS S120 AC drive is combined with the PM340 Power Module to create a high-performance single drive. For fieldbus communication, PROFINET (PN) and PROFIBUS (DP) versions are available.

Design

The CU310-2 Control Unit features the following connections and interfaces as standard:

- Fieldbus interface
  - CU310-2 PN: 1 PROFINET interface with 2 ports (RJ45 sockets) with PROFIdrive V4 profile
  - CU310-2 DP: 1 PROFIBUS interface with PROFIdrive V4 profile
- 1 DRIVE-CLiQ socket for communication to the DRIVE-CLiQ motor or other DRIVE-CLiQ stations (e.g. Sensor Modules or Terminal Modules)
- 1 encoder evaluation for evaluating the following encoder signals
  - Incremental encoder TTL/HTL
  - SSI encoder without incremental signals
- 1 PE/protective conductor connection
- 1 connection for the electronics power supply via the 24 V DC power supply connector
- 1 temperature sensor input (KTY84-130 or PTC)
- 3 parameterizable, fail-safe (available soon) digital inputs (isolated), or alternatively 6 parameterizable digital inputs (isolated)
- 5 parameterizable digital inputs (isolated)
- 1 parameterizable, fail-safe (available soon) digital output (isoltaed), or alternatively 1 digital output (isolated)
- 8 parameterizable bidirectional digital inputs/outputs (non-isolated)
- 1 analog input: ±10 V, 13 bit resolution
- 1 Ethernet interface (female RJ45) for commissioning and diagnostics
- 1 slot for the CompactFlash card on which firmware and parameters are stored
- 1 PM-IF interface for communication with the Power Modules in blocksize format
- 3 test sockets and one reference ground for commissioning support
- 1 interface to the BOP20 Basic Operator Panel

The status of the CU310-2 Control Unit is indicated via multi-color LEDs.

A BOP20 Basic Operator Panel can also be snapped directly onto the CU310-2 Control Unit for diagnostic purposes.

As the firmware and parameter settings are stored on a plug-in CompactFlash card, the Control Unit can be changed without the need for software tools.

SINAMICS S120 drive system
CU310-2 Control Unit for single-axis drives

2

Integration

The CU310-2 Control Unit controls Power Modules in blocksize format via the PM-IF interface. DRIVE-CLiQ motors or Sensor Modules (SMC) can also be connected to the integrated DRIVE-CLiQ socket to permit the operation of motors without a DRIVE-CLiQ interface.

With the BOP20 Basic Operator Panel, parameters can be changed directly on the device. The BOP20 Basic Operator Panel can also be snapped onto the CU310-2 Control Unit during operation to perform troubleshooting procedures.

The CU310-2 Control Unit and other connected components are commissioned and diagnosed with the STARTER commissioning tool. The Control Unit CU310-2 requires a CompactFlash card with firmware version V4.2 or higher.

A CU310-2 PN Control Unit communicates with the higher-level control system using PROFINET IO and the PROFIdrive V4 profile.

The SINAMICS S120 drive system with the CU310-2 PN Control Unit then assumes the function of a PROFINET IO Device and can perform the following functions:

• PROFINET IO Device

• 100 Mbit/s full duplex

• Supports real-time classes of PROFINET IO:
  - RT (Real-Time)
  - IRT (Isochronous Real-Time), minimum send cycle 500 μs

• Connects to controls as PROFINET IO Devices in accordance with PROFIdrive according to Specification V4

• Standard TCP/IP communication for engineering processes using the STARTER commissioning tool

• Integrated 2-port switch with two RJ45 sockets based on the ERTEC ASIC. The optimum topology (line, star, tree) can therefore be configured without additional external switches.

2

■ Overview

The CompactFlash card contains the firmware and parameter settings. The CompactFlash card is plugged into the correct slot on the CU310-2 Control Unit.

■ Design

A CU310-2 Control Unit can perform the communication, open-loop and closed-loop control functions for one Power Module. The performance expansion is not required in this case.

In addition to the firmware, the CompactFlash card also contains licensing codes which are required to enable firmware options (Safety Integrated Extended functions in the current version). The Safety Integrated Extended functions must be ordered via the order code **F01** in addition to the order number.

The firmware option can also be enabled on-site, for example, if the Safety Integrated Extended functions should be enabled later. You will need the serial number of the CompactFlash card and the order number of the firmware option to be enabled. With this information, you can purchase the associated license code from a license database and enable the firmware option. The license code is only valid for the CompactFlash card declared and cannot be transferred to other CompactFlash cards.

SIPLUS CPU 1214C
compact CPU, AC/DC/relay

(extended temperature range and medial exposure)

Integrated program and
data memory of 50 KB,
load memory of 2 MB;
wide-range alternating voltage
supply 85 ... 264 V AC;
Boolean execution times of 0.1 μs
per operation;
14 digital inputs,
10 digital outputs (relay),
2 analog inputs;
expandable with up to
3 communication modules,
8 signal modules, and
1 signal board;
digital inputs usable as HSC
with 100 kHz

- Suitable for areas with
extraordinary medial exposure
(conformal coating)   **6AG1 214-1BE30-4XB0**

- Suitable for areas with
extraordinary medial exposure
(conformal coating); ambient
temperature -25 ... +55 °C;
without restrictions;
SB module can be used   **6AG1 214-1BE30-5XB0**

- Suitable for areas with
extraordinary medial exposure
(conformal coating); ambient
temperature -25 ... +70 °C;
from +60 ... +70 °C number of
simultaneously controllable
inputs and outputs max. 50%;
no SB module possible   **6AG1 214-1BE30-2XB0**

SIPLUS CPU 1214C
compact CPU, DC/DC/DC

(extended temperature range and medial exposure)

Integrated program and
data memory of 50 KB,
load memory of 2 MB;
voltage supply 24 V DC;
Boolean execution times of 0.1 μs
per operation;
14 digital inputs,
10 digital outputs,
2 analog inputs;
expandable with up to
3 communication modules,
8 signal modules and
1 signal board;
digital inputs usable as HSC
with 100 kHz;
24 V DC digital outputs usable
as pulse outputs (PTO) or pulse-
width-modulated outputs (PWM)
with 100 kHz

- Suitable for areas with
extraordinary medial exposure
(conformal coating)   **6AG1 214-1AE30-4XB0**

- Suitable for areas with
extraordinary medial exposure
(conformal coating); ambient
temperature -25 ... +55 °C;
without restrictions;
SB module can be used   **6AG1 214-1AE30-5XB0**

- Suitable for areas with extraor-
dinary medial exposure
(conformal coating); ambient
temperature -25 ... +70 °C;
from +60 ... +70 °C number of
simultaneously controllable
inputs and outputs max. 50%;
no SB module possible   **6AG1 214-1AE30-2XB0**

SIPLUS CPU 1214C
compact CPU, DC/DC/relay

(extended temperature range and medial exposure)

Integrated program and
data memory of 50 KB,
load memory of 2 MB;
power supply 24 V DC;
Boolean execution times of 0.1 μs
per operation;
14 digital inputs,
10 digital outputs (relay),
2 analog inputs;
expandable with up to
3 communication modules,
8 signal modules and
1 signal board;
digital inputs usable as HSC
with 100 kHz

- Suitable for areas with
extraordinary medial exposure
(conformal coating)   **6AG1 214-1HE30-4XB0**

- Suitable for areas with
extraordinary medial exposure
(conformal coating);
ambient temperature
-25 ... +55 °C;
without restrictions;
SB module can be used   **6AG1 214-1HE30-5XB0**

- Suitable for areas with
extraordinary medial exposure
(conformal coating);
ambient temperature
-25 ... +70 °C;
from +60 ... +70 °C number of
simultaneously controllable
inputs and outputs max. 50%;
no SB module possible   **6AG1 214-1HE30-2XB0**

Accessories   See SIMATIC S7-1200
CPU 1214C

CPU 314C-2 PN/DP

■ Overview

- The compact CPU with integral digital and analog inputs/outputs and technological functions
- High processing performance in binary and floating-point arithmetic
- For connecting distributed I/O via PROFIBUS and PROFINET
- Combined MPI/PROFIBUS DP master/slave interface
- PROFINET interface with 2-port switch
- PROFINET IO Controller for operating distributed I/O on PROFINET
- PROFINET I-Device for connecting the CPU as intelligent PROFINET device under a SIMATIC or third-party PROFINET I/O controller
- Component based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component based Automation (CBA)
- Integrated Web server with the option of creating user-defined web pages
- Isochronous mode on PROFINET

SIMATIC Micro Memory Card required for operation of CPU.

- with PG interface, 100 units	**6ES7 972-0BB52-0XB0**
• with axial cable outlet for SIMATIC OP, for connecting to PPI, MPI, PROFIBUS	**6GK1 500-0EA02**

PROFIBUS FastConnect bus cable	**6XV1 830-0EH10**

Standard type with special design for quick mounting, 2-core, shielded, sold by the meter, max. delivery unit 1000 m, minimum order quantity 20 m

Repeater RS 485 for PROFIBUS	**6ES7 972-0AA02-0XA0**

Data transfer rate up to 12 Mbit/s; 24 V DC; IP20 housing

PROFINET bus components

IE FC TP standard cable GP 2x2	**6XV1 840-2AH10**

4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/IE FC RJ45 Plug; PROFINET-compliant; with UL approval; sold by the meter, max. delivery unit 1000 m, minimum order quantity 20 m

FO standard cable GP (50/125)	**6XV1 873-2A**

Standard cable, splittable, UL approval, sold by the meter

SCALANCE X204-2 Industrial Ethernet switch	**6GK5 204-2BB10-2AA3**

Industrial Ethernet switches with integral SNMP access, Web diagnostics, copper cable diagnostics and PROFINET diagnostics, for configuring linear bus, star and ring topologies; four 10/100 Mbit/s RJ45 ports and two FO ports

Compact Switch Module CSM 377	**6GK7 377-1AA00-0AA0**

Unmanaged switch for the connection of a SIMATIC S7-300, ET 200M and up to three other nodes to Industrial Ethernet operating at 10/100 Mbit/s; 4 x RJ45 ports; external 24 V DC power supply, LED diagnostics, S7-300 module incl. electronic manual on CD-ROM

IE FC RJ45 Plugs

RJ45 plug-in connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables

IE FC RJ45 Plug 145

145° cable outlet

	Order No.
• 1 unit	**6GK1 901-1BB30-0AA0**
• 10 units	**6GK1 901-1BB30-0AB0**
• 50 units	**6GK1 901-1BB30-0AE0**

IE FC RJ45 Plug 180

180° cable outlet

	Order No.
• 1 unit	**6GK1 901-1BB10-2AA0**
• 10 units	**6GK1 901-1BB10-2AB0**
• 50 units	**6GK1 901-1BB10-2AE0**

PROFIBUS/PROFINET bus components	See chapter 3, CA 01 catalog

PROFINET/Industrial Ethernet
Controllers / Modular controllers / SIMATIC S7-300

CPU 315-2 PN/DP

2

Overview

- The CPU with mid-range program memory and quantity frameworks
- High processing power in binary and floating-point arithmetic
- Used as central controller in production lines with central and distributed I/O
- PROFINET interface with 2-port switch
- PROFINET IO Controller for operating distributed I/O on PROFINET
- PROFINET I-Device for connecting the CPU as intelligent PROFINET device under a SIMATIC or third-party PROFINET I/O Controller
- Component Based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)
- Integrated web server with the option of creating user-defined web pages
- Combined MPI/PROFIBUS DP master/slave interface
- Isochronous mode on PROFIBUS and PROFINET

SIPLUS CPU 315-2 PN/DP

Overview

- The CPU with medium-sized program memory and quantity frameworks
- High processing performance in binary and floating-point arithmetic
- Used as central controller in production lines with central and distributed I/O
- Component Based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)
- PROFINET IO Controller for operating distributed I/O on PROFINET
- PROFINET interface with 2-port switch
- Combined MPI/PROFIBUS DP master/slave interface
- Isochronous mode on PROFIBUS

SIMATIC Micro Memory Card required for operation of the CPU.

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

SIPLUS CPU 315-2 PN/DP		
Order number	6AG1 315-2EH14-2AY0	6AG1 315-2EH14-7AB0
Order No. based on	6ES7 315-2EH14-0AB0	6ES7 315-2EH14-0AB0
Ambient temperature range	-25 ... +60 °C	-25 ... +70 °C
Conformal coating	Coating of the printed circuit boards and the electronic components	
Technical data	The technical data of the standard product applies except for the ambient conditions	
Compliant with the standards for electronic equipment used on railway rolling stock (EN 50155, temperature T1, category 1).	Yes	No
Ambient conditions		
Relative humidity	5 ... 100 % Condensation permissible	
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)	
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]	
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]	
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range	
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K	
	658 ... 540 hPa (+3500 ... +5000 m) derating 20 K	

[1] ISA-S71.04 severity level GX: Long-term load: SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm Limit value (max. 30 min/d): SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm
[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

SIPLUS CPU 315-2 PN/DP (extended temperature range and medial exposure)	
Work memory 384 KB, power supply 24 V DC, combined MPI/PROFIBUS DP master/slave interface, Ethernet/PROFINET interface with 2-port switch; MMC required	**6AG1 315-2EH14-7AB0**
Additional conformance with EN 50155	**6AG1 315-2EH14-2AY0**
Accessories	See SIMATIC CPU 315-2 PN/DP

■ Overview

- The CPU with a large program memory and quantity framework for demanding applications
- For cross-industry automation tasks in series machine, special machine and plant construction
- Used as central controller in production lines with central and distributed I/O
- High processing power in binary and floating-point arithmetic
- PROFINET interface with 2-port switch
- PROFINET I/O Controller for operating distributed I/O on PROFINET
- PROFINET I-Device for connecting the CPU as intelligent PROFINET device under a SIMATIC or third-party PROFINET I/O Controller
- Distributed intelligence in Component Based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)
- Integrated web server with the option of creating user-defined web pages
- Combined MPI/PROFIBUS DP master/slave interface
- Isochronous mode on PROFIBUS and PROFINET
- Optionally supports the use of SIMATIC engineering tools

■ Overview

- The CPU with a large program memory and quantity structure for demanding applications
- Distributed intelligence in Component Based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)
- PROFINET IO Controller for operating distributed I/Os on PROFINET
- For cross-sector automation tasks in series machine, special machine and plant construction
- Used as central controller in production lines with central and distributed I/O
- For comprehensive I/O configuration
- For setting up distributed I/O structures
- High processing performance in binary and floating-point arithmetic
- Combined MPI/PROFIBUS DP master/slave interface
- Optionally supports the use of SIMATIC engineering tools

Micro Memory Card required for operation of CPU.

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

	SIPLUS CPU 317-2 PN/DP	
Order No.	6AG1 317-2EK13-2AB0	6AG1 317-2EK13-2AY0
Order No. based on	6ES7 317-2EK13-0AB0	6ES7 317-2EK13-0AB0
Ambient temperature range	-25 ... +70 °C	
Conforms with standard for electronic equipment used on rolling stock (EN 50155)	No	Yes
Conformal coating	Coating of the printed circuit boards and the electronic components	
Technical specifications	The technical data of the standard product applies except for the ambient conditions.	
Ambient conditions		
Relative humidity	5 ... 100 % Condensation permissible	
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)	
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]	
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]	
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range	
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K	
	658 ... 540 hPa (+3500 ... +5000 m) derating 20 K	

[1] ISA-S71.04 severity level GX: Long-term load:
SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d):
SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

SIPLUS CPU 317-2 PN/DP (extended temperature range and medial exposure)	
Work memory 512 KB, power supply 24 V DC, combined MPI/PROFIBUS DP master/slave interface, Ethernet/PROFINET interface; MMC required	**6AG1 317-2EK13-2AB0**
Additional conformance with EN 50155	**6AG1 317-2EK13-2AY0**
Accessories	See SIMATIC CPU 317-2 PN/DP

CPU 319-3 PN/DP

2

■ Overview

- The CPU with high command processing performance, large program memory and quantity framework for demanding applications
- For cross-industry automation tasks in series machine, special machine and plant construction
- Used as central controller in production lines with central and distributed I/O on PROFIBUS and PROFINET
- PROFINET I/O controller for operating distributed I/O on PROFINET
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device under a SIMATIC or non-Siemens PROFINET I/O controller
- PROFINET interface with 2-port switch
- Isochronous mode on PROFIBUS or PROFINET
- Integral Web server with the option of creating user-defined Web sites
- Distributed intelligence in Component Based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)
- Optionally supports the use of SIMATIC engineering tools

SIMATIC Micro Memory Card required for operation of the CPU.

PROFIBUS bus components

PROFIBUS DP bus connector RS 485

- with 90° cable outlet, max. transfer rate 12 Mbit/s
  - without PG interface — **6ES7 972-0BA12-0XA0**
  - with PG interface — **6ES7 972-0BB12-0XA0**

- with 90° cable outlet for FastConnect connection system, max. transfer rate 12 Mbit/s
  - without PG interface, 1 unit — **6ES7 972-0BA52-0XA0**
  - without PG interface, 100 units — **6ES7 972-0BA52-0XB0**
  - with PG interface, 1 unit — **6ES7 972-0BB52-0XA0**
  - with PG interface, 100 units — **6ES7 972-0BB52-0XB0**

- with axial cable outlet for SIMATIC OP, for connecting to PPI, MPI, PROFIBUS — **6GK1 500-0EA02**

PROFIBUS FastConnect bus cable — **6XV1 830-0EH10**

Standard type with special design for quick mounting, 2-core, shielded,
sold by the meter,
max. delivery unit 1000 m,
minimum ordering quantity 20 m

RS 485 repeater for PROFIBUS — **6ES7 972-0AA02-0XA0**

Transfer rate
up to 12 Mbit/s; 24 V DC;
IP20 enclosure

PROFINET bus components

IE FC TP standard cable GP 2x2 — **6XV1 840-2AH10**

4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/ IE FC RJ45 Plug; PROFINET-compatible; with UL approval;
sold by the meter,
max. delivery unit 1000 m, minimum ordering quantity 20 m

FO Standard Cable GP (50/125) — **6XV1 873-2A**

Standard cable, splittable, UL approval, sold by the meter

SCALANCE X204-2 Industrial Ethernet Switch — **6GK5 204-2BB10-2AA3**

Industrial Ethernet Switches with integral SNMP access, Web diagnostics, copper cable diagnostics and PROFINET diagnostics for configuring line, star and ring topologies; four 10/100 Mbit/s RJ45 ports and two FO ports

Compact Switch Module CSM 377 — **6GK7 377-1AA00-0AA0**

Unmanaged switch for connecting a SIMATIC S7-300, ET 200M and up to three other participants to Industrial Ethernet with 10/100 Mbit/s;
4 x RJ45 ports;
external 24 V DC power supply, LED diagnostics, S7-300 module incl. electronic manual on CD-ROM

IE FC RJ45 plugs

RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables

IE FC RJ45 plug 145

145° cable outlet

- 1 unit — **6GK1 901-1BB30-0AA0**
- 10 units — **6GK1 901-1BB30-0AB0**
- 50 units — **6GK1 901-1BB30-0AE0**

IE FC RJ45 plug 180

180° cable outlet

- 1 unit — **6GK1 901-1BB10-2AA0**
- 10 units — **6GK1 901-1BB10-2AB0**
- 50 units — **6GK1 901-1BB10-2AE0**

PROFIBUS/PROFINET bus components — see chapter 3, CA 01 catalog

For establishing MPI/PROFIBUS/PROFINET communication

CPU 315F-2 PN/DP

2

Overview

- Based on CPU 315-2 PN/DP
- The CPU with medium-sized program memory and quantity structures for setting up a fail-safe automation system in plants with increased safety requirements
- Complies with safety requirements up to SIL 3 according to IEC 61508, PL e according to ISO 13849, and up to Cat. 4 according to EN 954-1
- Fail-safe I/O modules in distributed stations can be connected through the integrated PROFINET interface (PROFIsafe) and/or through the integrated PROFIBUS DP interface (PROFIsafe);
- Fail-safe I/O modules of the ET 200M range can also be centrally connected
- Central and distributed use of standard modules for non safety-relevant applications
- Component Based Automation (CBA) on PROFINET
- PROFINET IO Controller for operating distributed I/O on PROFINET
- PROFINET interface with 2-port switch
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)

SIPLUS CPU 315F-2 PN/DP

■ **Overview**

- The CPU with a medium sized program memory and quantity structures to build a fail-safe automation system for plants with increased safety requirements
- Complies with safety requirements up to SIL 3 according to IEC 61508, PL e in accordance with ISO 13849 and up to category 4 of EN 954-1
- The fail-safe I/O modules can be locally connected to the integrated PROFINET interface (PROFIsafe) and/or to the integrated PROFIBUS DP interface (PROFIsafe)
- The fail-safe I/O modules of ET 200M can be also centrally connected
- The standard modules for non-safety applications can be operated both centrally and locally
- Component based Automation (CBA) on PROFINET
- PROFINET IO Controller for operating distributed I/O on PROFINET
- PROFINET interface with 2-port switch
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component based Automation (CBA)

Micro Memory Card required for CPU operation.

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

	SIPLUS CPU 315F-2 PN/DP	
Order No.	6AG1 315-2FJ14-2AB0	6AG1 315-2FJ14-2AY0
Order No. based on	6ES7 315-2FJ14-0AB0	6ES7 315-2FJ14-0AB0
Ambient temperature range	-25 ... +60 °C	
Conformal coating	Coating of the printed circuit boards and the electronic components	
Technical data	The technical data of the standard product applies except for the ambient conditions.	
Compliant with the standards for electronic equipment used on railway rolling stock (EN 50155, temperature T1, category 1).	No	Yes
Ambient conditions:		
Relative humidity	5 ... 100%, condensation allowed

- The fail-safe I/O modules of ET 200M can be also centrally connected
- The standard modules for non-safety applications can be operated both centrally and locally
- Component Based Automation (CBA) on PROFINET
- PROFINET IO Controller for operating distributed I/O on PROFINET
- PROFINET interface with 2-port switch
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)

SIMATIC Micro Memory Card required for operation of the CPU.

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

	SIPLUS CPU 317F-2 PN/DP	
Order number	**6AG1 317-2FK14-2AB0**	**6AG1 317-2FK14-2AY0**
Order No. based on	**6ES7 317-2FK14-0AB0**	**6ES7 317-2FK14-0AB0**
Ambient temperature range	-25 ... +60 °C	
Conformal coating	Coating of the printed circuit boards and the electronic components	
Technical data	The technical data of the standard product applies except for the ambient conditions.	
Compliant with the standards for electronic equipment used on railway rolling stock (EN 50155, temperature T1, category 1).	No	Yes
Ambient conditions		
Relative humidity	5 ... 100%, condensation allowed	

Technical documentation on SIPLUS can be found here:
www.siemens.com/siplus-extreme

■ Ordering data	Order No.
SIPLUS CPU 317F-2 PN/DP (extended temperature range and medial exposure)	
Main memory 1.5 MB, power supply 24 V DC, MPI/PROFIBUS DP master/slave interface; Industrial Ethernet/ PROFINET interface; MMC required	**6AG1 317-2FK14-2AB0**
Additional conformance with EN 50155	**6AG1 317-2FK14-2AY0**
Accessories	See SIMATIC CPU 317F-2 PN/DP

2

PROFINET/Industrial Ethernet
Controllers / Modular controllers / SIMATIC S7-300

CPU 319F-3 PN/DP

2

Overview

- The fail-safe CPU with high-performance command processing, large program memory and large quantity structure for demanding applications
- For constructing a fail-safe automation system for plants with increased safety requirements
- Complies with safety requirements up to SIL 3 according to IEC 61508, PL e according to 13849-1, and up to Cat. 4 according to EN 954-1
- Fail-safe I/O modules can be connected decentralized over the integrated PROFINET interface (PROFIsafe) and/or over the integrated PROFIBUS DP interface (PROFIsafe);
- Fail-safe I/O modules of ET200M can also be connected centrally
- Standard modules for non-safety-related applications can be operated centrally and decentralized
- Distributed intelligence in Component Based Automation (CBA) on PROFINET
- Isochronous mode on PROFIBUS
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component based Automation (CBA)

SIMATIC Micro Memory Card required for operation of CPU.

Ordering data

	Order No.
CPU 319F-3 PN/DP	**6ES7 318-3FL01-0AB0**
Main memory 2.5 MB, power supply 24 V DC, combined MPI/PROFIBUS DP master/slave interface, PROFIBUS DP master/slave interface, Ethernet/PROFINET interface; MMC required	
Distributed Safety V5.4 programming tool	
Task: Software for configuring fail-safe user programs for SIMATIC S7-300F, S7-400F, ET 200S *Requirement:* STEP 7 V5.3 SP3 and higher	
Floating license	**6ES7 833-1FC02-0YA5**
Software Update Service	**6ES7 833-1FC00-0YX2**

Electronic manuals on DVD, multilingual: LOGO!, SIMADYN, SIMATIC bus components, SIMATIC C7, S IMATIC distributed I/O, SIMATIC HMI, SIMATIC Sensors, SIMATIC NET, SIMATIC PC Based Automation, SIMATIC PCS 7, SIMATIC PG/PC, SIMATIC S7, SIMATIC Software, SIMATIC TDC	
SIMATIC Manual Collection update service for 1 year	**6ES7 998-8XC01-8YE2**
Current "Manual Collection" DVD and the three subsequent updates	

■ **Ordering data**

	Order No.		Order No.
Power supply connector	**6ES7 391-1AA00-0AA0**		
10 units, spare part			

	Order No.
Manual "Communication for SIMATIC S7-300/-400"	
German	**6ES7 398-8EA00-8AA0**
English	**6ES7 398-8EA00-8BA0**
PC adapter USB	**6ES7 972-0CB20-0XA0**
for connecting a PC to SIMATIC S7-200/300/400 via USB; with USB cable (5 m)	

PROFIBUS bus components

	Order No.
PROFIBUS DP bus connector RS 485	
• with 90° cable outlet, max. transfer rate 12 Mbit/s	
- without PG interface	**6ES7 972-0BA12-0XA0**
- with PG interface	**6ES7 972-0BB12-0XA0**
• with 90° cable outlet for FastConnect connection system, max. transfer rate 12 Mbit/s	
- without PG interface, 1 unit	**6ES7 972-0BA52-0XA0**
- without PG interface, 100 units	**6ES7 972-0BA52-0XB0**
- with PG interface, 1 unit	**6ES7 972-0BB52-0XA0**
- with PG interface, 100 units	**6ES7 972-0BB52-0XB0**
• with axial cable outlet for SIMATIC OP, for connecting to PPI, MPI, PROFIBUS	**6GK1 500-0EA02**
PROFIBUS FastConnect bus cable	**6XV1 830-0EH10**
Standard type with special design for quick mounting, 2-core, shielded, sold by the meter, max. delivery unit 1000 m, minimum ordering quantity 20 m	
RS 485 repeater for PROFIBUS	**6ES7 972-0AA02-0XA0**
Transfer rate up to 12 Mbit/s; 24 V DC; IP20 enclosure	

PROFINET bus components

	Order No.
IE FC TP standard cable GP 2x2	**6XV1 840-2AH10**
4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/ IE FC RJ45 Plug; PROFINET-compatible; with UL approval; sold by the meter, max. delivery unit 1000 m, minimum ordering quantity 20 m	
FO Standard Cable GP (50/125)	**6XV1 873-2A**
Standard cable, splittable, UL approval, sold by the meter	
SCALANCE X204-2 Industrial Ethernet Switch	**6GK5 204-2BB10-2AA3**
Industrial Ethernet Switches with integral SNMP access, Web diagnostics, copper cable diagnostics and PROFINET diagnostics for configuring line, star and ring topologies; four 10/100 Mbit/s RJ45 ports and two FO ports	
Compact Switch Module CSM 377	**6GK7 377-1AA00-0AA0**
Unmanaged switch for connecting a SIMATIC S7-300, ET 200M and up to three other participants to Industrial Ethernet with 10/100 Mbit/s; 4 x RJ45 ports; external 24 V DC power supply, LED diagnostics, S7-300 module incl. electronic manual on CD-ROM	

IE FC RJ45 plugs

	Order No.
RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables	
IE FC RJ45 plug 145	
145° cable outlet	
• 1 unit	**6GK1 901-1BB30-0AA0**
• 10 units	**6GK1 901-1BB30-0AB0**
• 50 units	**6GK1 901-1BB30-0AE0**
IE FC RJ45 plug 180	
180° cable outlet	
• 1 unit	**6GK1 901-1BB10-2AA0**
• 10 units	**6GK1 901-1BB10-2AB0**
• 50 units	**6GK1 901-1BB10-2AE0**
PROFIBUS/PROFINET bus components	See chapter 3, CA 01 catalog
For establishing MPI/PROFIBUS/PROFINET communication

SIPLUS CPU 416-3 PN/DP

2

■ Overview

High-performance CPUs in the high-end performance range

- Applicable for plants with high requirements in the high-end performance range
- Integrated PROFINET functions in CPU 416-3 PN/DP

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

	SIPLUS CPU 416-3 PN/DP
Order number	6AG1 416-3ER05-4AB0
Order No. based on	6ES7 416-3ER05-0AB0
Range of ambient temperature	0 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions
Ambient conditions	
Relative humidity	5 ... 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1) 2)]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2)]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range 795 ... 658 hPa (+2000 ... +3500 m) derating 10 K 658 ... 540 hPa (+3500 ... +5000 m) derating 20 K

[1)] ISA-S71.04 severity level GX: Long-term load: $SO_2 < 4.8$ ppm; $H_2S < 9.9$ ppm; $Cl < 0.2$ ppm; $HCl < 0.66$ ppm; $HF < 0.12$ ppm; $NH < 49$ ppm; $O_3 < 0.1$ ppm; $NOX < 5.2$ ppm
Limit value (max. 30 min/d): $SO_2 < 17.8$ ppm; $H_2S < 49.7$ ppm; $Cl < 1.0$ ppm; $HCl < 3.3$ ppm; $HF < 2.4$ ppm; $NH < 247$ ppm; $O_3 < 1.0$ ppm; $NOX < 10.4$ ppm

[2)] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

www.siemens.com/siplus-extreme

■ Ordering data	Order No.
SIPLUS CPU 416-3 PN/DP (medial exposure) Power supply 24 V DC, MPI/PROFIBUS DP master interface, PROFINET interface, module slot for 1 IF module, slot for memory card, including mounting position labels	**6AG1 416-3ER05-4AB0**
11.2 MB work memory	
Accessories	See SIMATIC CPU 416-3 PN/DP

2

Overview

- For constructing a fail-safe automation system for plants with increased safety requirements
- CPUs for high demands in the mid-level performance range
- Applicable for plants with additional demands on programming scope and processing speed
- Satisfies safety requirements up to SIL 3 acc. to IEC 61508 and Cat. 4 acc. to EN 954-1
- Standard and safety-related tasks can be performed with a single CPU
- Integrated PROFINET functions in CPU 414F-3 PN/DP
- Multi-processor mode is possible
- Safety-related communication with distributed I/O devices over PROFIBUS DP or PROFINET IO with PROFIsafe profile
- Fail-safe I/O modules can be connected in a distributed manner via the integrated interfaces (DP and PN with CPU 416F-3 PN/DP) and/or through communication modules (CP 443-5 Extended and CP 443-1 Adv.)
- Central and distributed use of standard modules for non-safety-oriented applications

Overview

- SIMATIC WinAC RTX:
  Optimized for applications that require a high degree of flexibility and integration capability.
- The software solution for tasks that require hard deterministic behavior and high performance.
- With real-time expansion for assuring deterministic behavior for the control section.

New with WinAC RTX 2010:
- Operation under Windows 7
- Web server
- New PROFINET functions:
  - Isochronous mode
  - Shared Device
  - Media redundancy
  - IP configuration

SIMATIC WinAC RTX F

■ **Overview**

- SIMATIC WinAC RTX F:
Optimized for applications that demand a high degree of flexibility and integration capability and that must also satisfy safety requirements up to SIL 3 (IEC 61508).
- The software solution for tasks that require hard deterministic behavior and high performance.
- With real-time expansion for assuring deterministic behavior for the control section.
- Distributed I/O can be connected over PROFIBUS and/or PROFINET, also safety-related over PROFIsafe.

Overview

- SIMATIC WinAC software PLCs support powerful interfaces which permit close meshing of the control task with PC-based applications.
- WinAC ODK allows the user to develop applications or to integrate already existing applications into the control task.

New with WinAC ODK V4.2:

- CCX interface:
  - New SFB 65003 for asynchronous execution of ODK applications
  - Expansion of data access functions
  - Creation of Windows DLL with C# and VB
- SMX interface:
  - Access to the Shared Memory interface under IntervalZero RTX
  - Expansion of data access functions
  - Creation of Windows applications with C# and VB
- Supports MS Visual Studio 2005 and 2008 (under Windows)

Ordering data

	Order No.
SIMATIC WinAC ODK V4.2	
for integration of C/C++ code in WinAC PLCs, executable under Windows XP SP2 or SP3; CD-ROM with electronic documentation	
Single license	**6ES7 806-1CC03-0BA0**

Note:

2

Overview

- Get off to a fast start in automation solutions with embedded PC platforms.
  - Ready-to-use SIMATIC WinAC RTX or WinAC RTX F pre-installed on EC31
  - Prepared for use in a SIMATIC environment with PROFINET and Industrial Ethernet
  - Commissioning by specialist automation personnel as with the S7-300
  - Configuring and programming with SIMATIC STEP 7 over Industrial Ethernet
  - Optional visualization
- Modular expansion capability:
  Central expansion with
  - S7-300 I/O (SM modules of S7-300)
  - Expansion modules for additional PC interfaces, e.g. DVI-I, USB, Gigabit Ethernet networks and memory card slots, as well as PCI-104
- Rugged operation
  - Hard-disk-free operation based on flash disk and Windows Embedded Standard
  - Fan-free operation
- Flexibility of a PC-based automation environment
  - Free memory space on flash disk can be used for other PC applications
  - Use of WinAC ODK with SIMATIC WinAC RTX and WinAC RTX F (read-only in safety-related program part)
  - Connection option for USB devices
  - Memory capacity expandable using multimedia card
- Data retentivity for WinAC RTX and RTX F without uninterruptible power supply (UPS)

■ **Overview**

- Expansion modules for SIMATIC S7-modular Embedded Controller EC31
  - EM PCI-104 for additionally accommodating up to 3 PCI-104 cards
  - EM PC with additional PC interfaces and slots for memory media

■ **Ordering data** | **Order No.**

	Order No.
EM PCI-104 expansion module	**6ES7 677-1DD40-1AA0**
For fitting up to 3 additional PCI-104 cards	
EM PC expansion module	**6ES7 677-1DD50-2AA0**
Additional connection options: 2 USB interfaces, 1 Gigabit Ethernet interface, 1 serial interface, 1 slot for CF card, 1 slot for SD card/Micro Memory Card	
CP 5603 mEC Package	**6GK1 560-3AE00**
for use of the CP 5603 in SIMATIC S7-MEC; consists of	

- CP 5603:
  PCI104 card for connection to PROFIBUS incl. DP-Base software with NCM PC; DP-RAM interface for DP master or DP slave, incl. PG and FDL protocols; single license for one installation, runtime software, software and electronic manual on CD-ROM, Class A, for operating system support see SIMATIC NET software; German/English
- Insert plate for CP 5603 for mounting into the EM PCI-104 expansion module of the SIMATIC S7-MEC

■ Overview

- A quick start in automation solutions with embedded PC platforms
  - SIMATIC WinAC RTX or SIMATIC WinAC RTX F preinstalled on SIMATIC IPC227D and ready for use
  - PROFINET RT and Industrial Ethernet pre-configured for use in a SIMATIC environment
  - Optional WinCC RT Advanced for visualization tasks in parallel with SIMATIC WinAC RTX
  - Configuration and programming with SIMATIC STEP 7 via Industrial Ethernet or PROFINET
- Safety requirements up to SIL 3 in accordance with IEC 61508/62061 or EN ISO 13849-1 up to PL e can be implemented with WinAC RTX F.
- Rugged operation
  - Operation without a hard disk, based on CompactFlash Card (CF Card) or Solid-State Drive and Windows Embedded Standard 2009
  - Fan-free operation
  - 128 KB of retentive data for WinAC RTX, also without uninterruptible power supply (UPS)
- Flexibility of a PC-based automation environment
  - Use of WinAC ODK with SIMATIC WinAC RTX or SIMATIC WinAC RTX F (read-only for fail-safe program section)
  - Connection option for USB devices, flat panel monitor or screen
  - PCIe cards can be plugged in

■ Overview

- Get off to a fast start in automation solutions with embedded PC platforms.
  - SIMATIC WinAC RTX or SIMATIC WinAC RTX F preinstalled on SIMATIC IPC427C and ready for use
  - PROFINET, PROFIBUS and Industrial Ethernet prepared for use in a SIMATIC environment
  - Optional WinCC flexible for visualization tasks in parallel with SIMATIC WinAC RTX.
  - Configuration and programming with SIMATIC STEP 7 via Industrial Ethernet, PROFINET, or PROFIBUS
- Safety requirements up to SIL 3 in accordance with IEC 61508/62061 or EN ISO 13849-1 up to PL e can be implemented with WinAC RTX F.
- Rugged operation
  - Operation without a hard disk, based on CompactFlash Card (CF Card) or Solid State Drive and Windows Embedded Standard
  - Fan-free operation
  - 128 KB of retentive data for WinAC RTX, also without uninterruptible power supply (UPS)
- Flexibility of a PC-based automation environment
  - Free memory space on CF Card can be used for other PC applications
  - Use of WinAC ODK with SIMATIC WinAC RTX or SIMATIC WinAC RTX F (read-only for fail-safe program section)
  - Connection option for USB devices, flat panel monitor or screen
  - PCI 104 cards can be plugged in
- High-performance service concept
  - Replacement parts for preferred types available ex stock
- New hardware basis SIMATIC IPC427C
- Cost-effective versions with PROFINET, based on the standard Ethernet interface
- Current product versions of the pre-installed software:
  - SIMATIC WinAC RTX 2010 or SIMATIC WinAC RTX F 2010
  - SIMATIC WinCC flexible 2008 SP2
  - SIMATIC NET Edition 2008

SIMATIC HMI IPC277D bundles

Overview

SIMATIC HMI IPC277D for implementing simple visualization and control tasks

- High degree of flexibility when selecting rugged widescreen fronts from 7" to 12" for more freely configurable display area
- High resolution, large viewing angle and up to 100% dimmable backlighting for brilliant display with optimized power consumption
- Absolutely maintenance-free due to the use of CompactFlash and SSD as mass storage and fanless operation up to 50 °C ambient temperature
- Maximum industrial functionality due to non-volatile retentive memory for battery-free operation
- Ready-to-run embedded bundles with visualization or/and control software

The following front installation versions are available:

- 7" Touch
- 9" Touch
- 12" Touch
- All fronts in widescreen design

SIMATIC HMI IPC477C bundles

Overview

Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation

- Maintenance-free (no rotating components such as fan and hard disk)
- Rugged construction: The PC is resistant to even the harshest mechanical stress and is extremely reliable in operation
- Battery-backed retentive memory onboard
- Compact design (only 61-69 mm installation depth for 12"-19")
- High investment protection
- Fast integration capability

The following versions are available:

- Built-in versions
  - 12" and 15" TFT Touch
  - 12" and 15" TFT Key
  - 19" Touch
- Support arm versions
  - PRO 15" and 19" Touch
    Fully-enclosed device to IP65 degree of protection for mounting on a support arm/stand.

• 2 GB	6ES7 648-2BF02-0XF0
• 4 GB	6ES7 648-2BF02-0XG0
• 8 GB	6ES7 648-2BF02-0XH0

Please be sure to note:

The HMI IPC477C is delivered as standard with an inserted CF card. The licenses are located on the supplied USB flash drive.

Note:

You can find more information in Catalog ST 80/ST PC and in the Industry Mall at www.siemens.com/industrymall

SIMATIC WinAC MP

◼ Overview

- WinAC MP, the software PLC based on Windows CE
- An optimized version is available for all current MP platforms
- The economical solution for all applications in combination with a rugged hardware platform
- Ideal for tasks on the machine level, saves space and costs
- Best service concept, backup/restore of all data on a standard SD card, standard Multi Media Card or standard USB stick

2

■ Overview

System connections for SIMATIC

CPs with standard functions

- CP 243-1 for SIMATIC S7-200, CP 343-1 Lean and CP 343-1 for SIMATIC S7-300, CP 443-1 for SIMATIC S7-400
- Designed for use in harsh industrial environments
- Shipbuilding certification for use on ships and offshore units
- Additional integrated 2-port switch for setting up small local networks with CP 343-1 Lean, CP 343-1 and CP 443-1
- Can be used via RJ45 interface for the industrial-standard SIMATIC NET FastConnect cabling system
- High-speed data transfer even with large volumes of data (10/100 Mbit/s)

CPs with function expansions

- CP 343-1 Advanced for SIMATIC S7-300
  - With security functionality (firewall and VPN)
  - With IT functionality
  - Can be used as a PROFINET IO Controller and IO Device with real-time characteristics
  - PROFINET CBA
  - With Gigabit connection, incl. routing functionality (10/100/1000 Mbit/s)
  - Network separation with IP-routing functionality
  - Additional integrated 2-port switch for setting up small local networks
  - Access protection via IP access list
- CP 443-1 Advanced for SIMATIC S7-400
  - With security functionality (firewall and VPN)
  - With IT functionality
  - Can be used as a PROFINET IO Controller with real-time characteristics
  - With Gigabit connection, incl. routing functionality (10/100/1000 Mbit/s)
  - Network separation with IP-routing functionality
  - Additional integrated 4-port switch for setting up small local networks
  - Access protection via IP access list
  - Operation in the SIMATIC H system for redundant S7-communication
  - Operation in fail-safe applications (PROFIsafe) together with SIMATIC S7-400 CPU 416F

PROFINET/Industrial Ethernet
System interfaces for SIMATIC S7

■ **Overview** (continued)

CPs for special fields of application "Value Added CP"

Special "Value Added" CPs are available to relieve the SIMATIC CPU of special communication tasks.

There are two such CP versions for the S7-300 system:
- CP 343-1 ERPC optimized for linking to MES or ERP systems by means of additional partner software
- CP 343-1 BACnet (Building Automation and Control Networks) for building automation.

	Hardware	Transport protocol			PROFINET			MRP	IT		IP-R	PG/OP	S7 communication		Open communication			Time			Telecontrol			ERP-Connect

Communication overview for SIMATIC S7 and telecontrol

CP 243-1

■ Overview

ISO	TCP	PN	MRP	IT	IP-R	PG/OP	S7
	●			●		●	●

Communication processor for connecting a SIMATIC S7-200 to Industrial Ethernet networks

The CP supports:

- PG/OP communication
- S7 communication
- IT communication

In addition, the CP 243-1 offers e-mail functions and user-created web pages and thus optimally supports maintenance and quality assurance. The Internet functions such as FTP allow connection to the most diverse PC-based systems.

■ Benefits

get Designed for Industry

- Process information can be accessed simultaneously (password protected) with standard Web browsers; software costs are reduced on the client side
- Low-cost bulk storage for data, statistics and HTML-based machine or plant documentation
- Simple universal linking of PLCs to different computers by means of FTP
- Local and worldwide transmission of event-driven messages by e-mail
- Time and cost savings due to fast and easy configuration, programming and monitoring from a central location via LAN
- Reduction of complexity and savings for networking all automation levels and devices since only Ethernet is required
- Simple startup and easy diagnostics options due to configuration support by STEP 7 Micro/WIN

■ Application

- The CP 243-1 communication processor is used to connect S7-200 to Industrial Ethernet.
- Distributed plants can be reached over telephone lines or the Internet by using a router and simple diagnostics, signal or user functions can be performed with the help of a web browser. The CP 243-1 is especially suited for plant sections where using PCs for permanent monitoring functions would not be cost-effective.
- PC applications can access the data of an S7-200 via an S7 OPC server. In this way, process data can be easily archived or further processed.
- SIMATIC S7-300 and S7-400 programmable controllers can communicate with a SIMATIC S7-200 with CP 243-1 over Industrial Ethernet which means that the S7-200 can also be used for more complex applications.

■ Design

The CP 243-1 offers all the advantages of the S7-200 design:

- Compact design in a rugged plastic enclosure
- Terminal strip for connecting the 24 V DC external supply voltage
- LED status display
- Optional DIN rail mounting or direct wall mounting
- RJ45 socket for connection to Industrial Ethernet with automatic data rate detection

■ Function

The CP 243-1 is connected to Industrial Ethernet via an RJ45 interface for 10/100 Mbit/s full/half duplex with autosensing/autonegotiation and autocrossover function.

The CP 243-1 enables communication between an S7-200 module and another S7-200 or S7-300/S7-400 controller via Industrial Ethernet, and access of the S7-200 programming software STEP 7-Micro/WIN to the S7-200 via Industrial Ethernet.

Integration into PC applications is possible by means of the S7-OPC server of the PC software.

IT functions

Simple visualization using Web technology, sending e-mails, and file processing (FTP).
The file system of the CP 243-1 can also be managed through the CPU. It is used as a bulk storage device, a cross-system computer link and a storage location for HTML pages and Java applets. The CP 243-1 has a large file system in which, apart from HTML pages, machine documentation or user guides can also be stored.

Web server
HTML pages can be downloaded and viewed with standard browsers

Web pages
- For observation of the S7-200 controller:
  standard pages for system diagnostics and a simple variable editor are supplied.
- Other customer-specific pages can be generated with any HTML tools

E-mails
sending of pre-defined e-mails directly from the user program Variables can be integrated into the text

FTP communication
The CPU can send data blocks as files to other computers or can read or delete the files of other computers (client function). Communication through FTP is possible with most operating systems

Configuration
- STEP 7 Micro/WIN V4.0 SP8 or higher is required for configuring the full functional scope of the CP 243-1.
- The CP 243-1 is supplied with a globally unique MAC address that cannot be changed.

■ Integration

S7-200 communication options with CP 243-1

CP 243-1

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-300

CP 343-1 Lean

■ Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
	●	●	●			●	●

Communication processor for connecting a SIMATIC S7-300 to Industrial Ethernet networks, also as PROFINET IO Device.

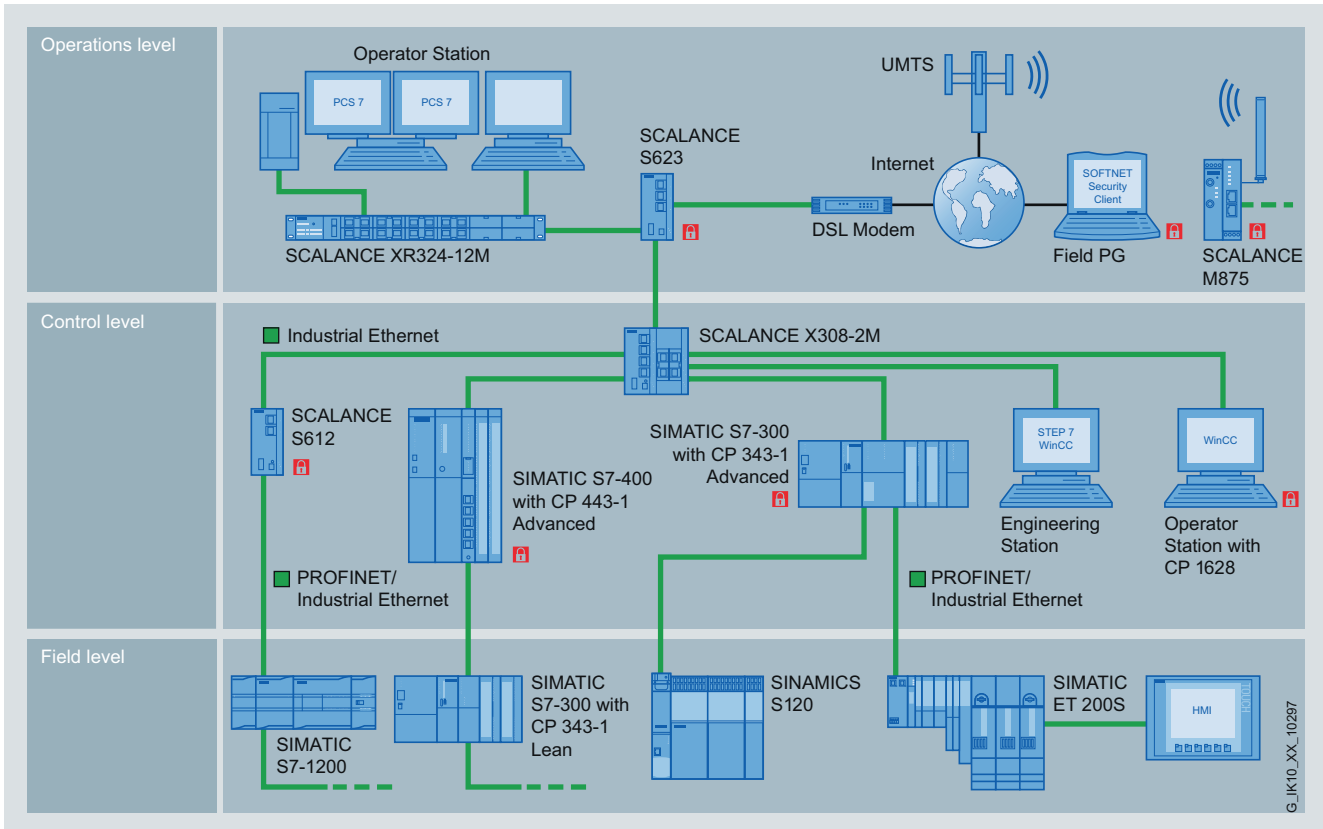
The CP supports:

- PG/OP communication
- S7 communication
- Open communication (SEND/RECEIVE)
- PROFINET communication

■ Benefits

- High level of plant availability due to support of media redundancy (MRP)
- Optimum support of maintenance through
  - Web-based diagnostics
  - Remote programming via WAN or a telephone network (ISDN)
  - Monitoring by means of IT network management tools (SNMP)
  - Module replacement without programming device thanks to saving of the configuration data on the CPU
- The capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 343-1 Lean ensures investment protection

■ Application

The CP 343-1 Lean is used to connect the SIMATIC S7-300 to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks and facilitates additional connections.


The CP 343-1 Lean offers the communication options of the S7-300 with

- PGs/PCs
- Master computers
- HMI devices
- Other SIMATIC S5/S7 systems
- PROFINET I/O Controllers

■ Design

The CP 343-1 Lean offers all the advantages of SIMATIC S7-300 system design:

- Compact design;
  the rugged plastic casing features on the front:
  - Two RJ45 sockets for connecting to Industrial Ethernet with automatic detection of transmission rate by means of autosensing;
    RJ45 sockets have an industry-compatible design with additional retaining collars for connection of IE FC RJ45 Plug 145/180
  - Diagnostic LEDs for each switch port
  - 2-pin plug-in terminal strip for connection of the 24 V DC external supply voltage
- Easy installation;
  The CP 343-1 Lean is snap-mounted on the S7-300 DIN rail and connected to adjacent modules through the bus connectors. There are no slot rules.
- The CP 343-1 Lean can be operated without a fan. A standby battery is not required.
- In combination with IM 360/361, CP 343-1 Lean can also be used in an expansion rack (ER).

■ Function

- PROFINET interface with two RJ45 ports, 10/100 Mbit/s full/half duplex with autosensing and autocrossover functionality via 2-port switch
- Communication services via interface:
  - Open communication (TCP/IP, UDP): Multicast for UDP
  - PG/OP communication: across networks by means of S7 routing
  - S7 communication (server only)
  - PROFINET IO device
- Media redundancy (MRP):
  - Within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP
- Diagnostics and network management:
  - Extensive diagnostic functions for all modules in the rack
  - Integration into network management systems through the support of SNMP V1
- Configuration of all functions with STEP 7 V5.4 and higher, or STEP 7 Professional V11
- Module replacement without programming device thanks to saving of the configuration data on the CPU

2

■ Integration

Line structure with CP 343-1 Lean with integrated real-time switch as a PROFINET IO device

Connection to higher-level network and PC-based system

Example configuration of CP 343-1 Lean as PROFINET I/O Device

2

Type of power supply	DC
Power supply	
• 1 from backplane bus	5 V
• External	24 V
Relative positive tolerance at 24 V DC	20 %
Relative negative tolerance at 24 V DC	15 %
Current consumed	
• from backplane bus at 5 V DC, typical	0.2 A
• from external power supply with 24 V DC	
- Typical	0.16 A
- Maximum	0.2 A
Effective power loss	5.8 W
Permitted ambient conditions	
Ambient temperature	
• with vertical installation during operation	0 … +40 °C
• with horizontal installation during operation	0 … +60 °C
• During storage	-40 ... +70 °C
• During transport	-40 ... +70 °C
Relative humidity at 25 °C without condensation during operation, maximum	95 %
IP degree of protection	IP20
Design, dimensions and weights	
Module format	S7-300 compact module, single-width
Width	40 mm
Height	125 mm
Depth	120 mm
Net weight	0.22 kg

Order No.	6GK7 343-1CX10-0XE0
Product type designation	**CP 343-1 Lean**
Performance data	
Performance data Open communication	
Number of possible connections for open communication by means of SEND/RECEIVE blocks, maximum	8
Data volume	
• as user data per ISO on TCP connection for open communication by means of SEND/RECEIVE blocks, maximum	8 KB
• as user data per TCP connection for open communication by means of SEND/RECEIVE blocks, maximum	8 KB
• as user data per UDP connection for open IE communication by means of SEND/RECEIVE blocks, maximum	2 KB
Number of multicast stations	8
Performance data S7 communication	
Number of possible connections for S7 communication	
• Maximum	4
Performance data Multiprotocol operation	
Number of active connections in multiprotocol mode	12
Performance data PROFINET communication as PN IO Device	
Product function: PROFINET IO Device	Yes
Data volume	
• As user data for input variables as PROFINET IO Device, maximum	512 byte
• As user data for output variables as PROFINET IO Device, maximum	512 byte
• As user data for input variables per submodule as PROFINET IO Device	240 byte
• As user data for output variables per submodule as PROFINET IO Device	240 byte
• As user data for the consistency area per submodule	240 byte
Number of submodules per PROFINET IO Device	32

SIPLUS CP 343-1 Lean

■ Overview

ISO	TCP/ UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
	●	●	●			●	●

- Interface for the SIMATIC S7-300 to Industrial Ethernet (not for SINUMERIK)
  - 2 x RJ45 interface for 10/100 Mbit/s full/half duplex connection (with autosensing for automatic switchover and autocrossover function)
  - Integral 2-port real-time switch ERTEC
  - Multi-protocol operation with TCP and UDP transport protocol and PROFINET I/O
  - Keep Alive function
- Communication services:
  - Open communication (TCP/IP and UDP):
  - PG/OP communication
  - S7 communication (server)
  - PROFINET IO device
- Multicast by UDP
- Remote programming and initial commissioning is possible over Industrial Ethernet
- IT communication
  - Web function
- Integration into network management through SNMP
- Configuration with STEP 7
- Cross-network programming device/operator panel communication through S7 routing
- Diagnostics possibilities in STEP 7 and Web browser

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

SIPLUS CP 343-1 Lean		
Order number	**6AG1 343-1CX10-2XE0**	**6AG1 343-1CX10-4XE0**
Order No. based on	6GK7 343-1CX10-0XE0	
Ambient temperature range	-25 ... +60 °C	0 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components	
Technical data	The technical data of the standard product applies except for the ambient conditions.	
Ambient conditions		
Relative humidity	5 ... 100 % Condensation permissible	
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)	
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]	
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]	
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range 795 ... 658 hPa (+2000 ... +3500 m) derating 10 K 658 ... 540 hPa (+3500 ... +5000 m) derating 20 K	

[1] ISA-S71.04 severity level GX: Long-term load:
SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d):
SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

CP 343-1

Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●			●	●

Communication processor for connecting a SIMATIC S7-300/SINUMERIK 840D powerline to Industrial Ethernet networks, also as PROFINET IO Controller or IO Device.

The CP supports:

- PG/OP communication
- S7 communication
- Open communication (SEND/RECEIVE)
- PROFINET communication

Benefits

get Designed for Industry

- High level of plant availability due to support of media redundancy (MRP)
- Optimum support of maintenance through
  - Web-based diagnostics
  - Remote programming via WAN or a telephone network (ISDN)
  - Monitoring by means of IT network management tools (SNMP)
  - Module replacement without programming device thanks to saving of the configuration data on the CPU
- Securing the system against unauthorized access by means of device-related IP address lists
- The capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 343-1 ensures investment protection

Application

The CP 343-1 is used for connecting the SIMATIC S7-300/SINUMERIK 840D powerline to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks and facilitates additional connections.

The CP 343-1 permits communication of the S7-300 with:

- PGs/PCs
- Master computers
- HMI devices
- SIMATIC S7/C7 systems
- PROFINET IO devices

Design

The CP 343-1 has all the advantages of the SIMATIC S7-300 design:

- Compact design;
  on the front, the rugged plastic housing features:
  - Two RJ45 sockets for connection to Industrial Ethernet with automatic sensing of the data transmission rate by means of Autosensing/Autonegotiation;
    the RJ45 sockets are industrially compatible and designed with additional holding collars for connecting to the IE FC RJ45 Plug 145/180
  - 2-pole plug-in terminal strip for connection of the 24 V DC external supply voltage
  - 8 LEDs for indication of the operating and communication status (diagnostics for each switch port)
- Easy installation;
  the CP 343-1 is mounted on the S7-300 rail and connected through the bus connector with the neighboring modules. No slot rules apply.
- Fan-free operation;
  A back-up battery is not required.
- Using the IM 360/361, the CP 343-1 can also be operated in the expansion rack (ER)
- Modules can be replaced without the need for a programming device

Function

- PROFINET interface with two RJ45 ports with 10/100 Mbit/s full/half duplex with autosensing and auto-crossover functionality via 2-port switch
- Communication services via interface:
  - Open communication (TCP/IP, UDP, ISO): Multicast for UDP
  - PG/OP communication: across networks by means of S7 routing
  - S7 communication (client, server, multiplexing)
  - PROFINET IO Controller or IO Device
- Media redundancy (MRP):
  - Within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP
- Diagnostics and network management:
  - Extensive diagnostic functions for all modules in the rack
  - Integration into network management systems through the support of SNMP V1
- Security mechanisms:
  - Access protection by means of configurable IP access list
- Configuration of all functions with STEP 7 V5.4 and higher, or STEP 7 Professional V11
- Module replacement without programming device thanks to saving of the configuration data on the CPU

2

◼ Integration

Line structure with CP 343-1 with integrated real-time switch
as a PROFINET IO controller or IO device

Connection to higher-level network and PC-based system

Interfacing to higher-level network with CP 343-1
as PROFINET IO controller

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-300

CP 343-1

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-300

CP 343-1

Ordering data	Order No.

CP 343-1 communication processor

For connection of SIMATIC S7-300 to Industrial Ethernet over ISO and TCP/IP; PROFINET IO Controller or PROFINET IO Device, MRP, integrated 2-port switch ERTEC; S7 communication, open communication (SEND/RECEIVE), FETCH/WRITE, with and without RFC 1006, multicast, DHCP, CPU clock synchronization via SIMATIC procedure and NTP, diagnostics, SNMP, access protection through IP access list, initialization over LAN 10/100 Mbit/s; with electronic manual on DVD

6GK7 343-1EX30-0XE0

IE FC TP Standard Cable GP 2x2

4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/ IE FC RJ45 Plug; PROFINET-compliant; with UL approval; sold by the meter max. length 1000 m, minimum order 20 m

6XV1 840-2AH10

C-PLUG

Removable media for easy device replacement upon failure, for receiving configuration or projects and application data, may be used in SIMATIC NET products with C-PLUG slot

6GK1 900-0AB00

Industrial Ethernet Switch SCALANCE X204-2

Industrial Ethernet switches with integral SNMP access, online diagnostics, copper cable diagnostics and PROFINET diagnostics for configuring line, star and ring topologies; four 10/100 Mbit/s RJ45 ports and two fiber-optic cable ports

6GK5 204-2BB10-2AA3

Compact Switch Module CSM 377

Unmanaged switch for connection of a SIMATIC S7-300-CPU, ET 200M and as many as three further nodes to Industrial Ethernet operating at 10/100 Mbit/s; 4 x RJ45 ports; external 24 V DC power supply, LED diagnostics, S7-300 module including electronic Manual on CD-ROM

6GK7 377-1AA00-0AA0

IE FC RJ45 Plug 145

RJ45 plug connector for Industrial Ethernet with a rugged metal enclosure and integrated insulation displacement contacts for connecting Industrial Ethernet FC installation cables; 145° cable outlet
- 1 pack = 1 unit
- 1 pack = 10 units
- 1 pack = 50 units

6GK1 901-1BB30-0AA0
6GK1 901-1BB30-0AB0
6GK1 901-1BB30-0AE0

IE FC Stripping Tool

Preadjusted stripping tool for fast stripping of the Industrial Ethernet FC cables

6GK1 901-1GA00

	Order No.

Target system:
SIMATIC S7-300/400,
SIMATIC C7, SIMATIC WinAC
Requirements:
Windows XP Professional SP3
(32 bit),
Windows 7 Professional (32 bit),
Windows 7 Enterprise (32 bit),
Windows 7 Ultimate (32 bit),
Microsoft Server 2003 R2 Std.
SP2 (32 bit),
Microsoft Server 2008 Std. SP2
(32 bit)
Type of delivery:
German, English, Chinese, Italian;
French, Spanish

	Order No.

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-300

SIPLUS CP 343-1

Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●			●	●

- Connection of SIMATIC S7-300/SINUMERIK 840D powerline to Industrial Ethernet
  - 2 x RJ-45 interface for 10/100 Mbit/s full/half-duplex connection with auto-sensing/auto-negotiation and auto-crossover function
  - Integrated 2-port real-time switch ERTEC
  - Multi-protocol operation with ISO, TCP, UDP transport protocol and PROFINET IO
  - Adjustable keep alive function
- Communication services:
  - Open communication (ISO, TCP/IP, and UDP)
  - PROFINET IO-Controller or PROFINET IO-Device
  - PG/OP communication: Cross-network by means of S7 routing
  - S7 communication (client, server, multiplexing)
- Media redundancy (MRP);
  within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP (V2.2 or higher).
- Multicast by UDP
- IP address assignment via DHCP, simple PC tool or via the user program (e.g. HMI)
- Access protection via configurable access list
- Remote programming and commissioning via Industrial Ethernet
- Configuration with STEP 7
- Automatic setting of CPU clock setting over Ethernet with NTP or SIMATIC procedure
- Web diagnostics
- Integration in network management systems via SNMP (MIB2 diagnostics information)
- Diagnostics possibilities in STEP 7 and Web browser

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

SIPLUS CP 343-1		
Order No.	**6AG1 343-1EX30-4XE0**	**6AG1 343-1EX30-7XE0**
Order No. based on	**6GK7 343-1EX30-0XE0**	**6GK7 343-1EX30-0XE0**
Ambient temperature range	0 ... +60 °C	-25 ... +70 °C
Conformal coating	Coating of the printed circuit boards and the electronic components	
Technical data	The technical data of the standard product applies except for the ambient conditions.	
Ambient conditions		
Relative humidity	5 ... 100 % Condensation permissible	
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)	
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]	
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]	
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range	
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K	
	658 ... 540 hPa (+3500 ... +5000 m) derating 20 K	

[1] ISA-S71.04 severity level GX: Long-term load:
SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d):
SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

CP 343-1 Advanced

Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●	●	●	●	●

Communication processor for connecting the SIMATIC S7-300/SINUMERIK 840D powerline to Industrial Ethernet networks, also as PROFINET IO Controller and IO Device.

The CP supports:

- PG/OP communication
- S7 communication
- Open communication (SEND/RECEIVE)
- PROFINET communication
- IT communication

In addition, the CP 343-1 Advanced offers e-mail functions and user-created web pages and thus optimally supports maintenance and quality assurance. The Internet functions such as FTP even allow connection to the most diverse PC-based systems. Therefore, for the S7-300, this CP is the bridge between the field level and the MES level. The CP 343-1 Advanced connects seamlessly to the security structures of the office and IT world.

Benefits

get Designed for Industry

- Cost advantage due to connection to two separate Ethernet segments with network separation
- High level of plant availability due to support of media redundancy (MRP)
- Optimum support of maintenance through
  - Web-based diagnostics
  - Remote programming via WAN or a telephone network (ISDN)
  - Monitoring by means of IT network management tools (SNMP)
  - Module replacement without programming device using the C-Plug swap medium
- Securing the system against unauthorized access [1] by means of
  - Central access protection for any devices within an automation cell, e.g. by means of authentication of the network stations
  - Secure remote access via the Internet by means of data encryption (VPN) and data integrity checking
  - Traceability by means of data logging on the basis of standard IT mechanisms (Syslog)
- The capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 343-1 Advanced ensures investment protection

Application

The CP 343-1 Advanced is used for connecting the SIMATIC S7-300/SINUMERIK 840D powerline to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks and facilitates additional connections.

The CP 343-1 Advanced provides the following communication options:

- PGs/PCs
- Master computers
- HMI systems
- SIMATIC S5/S7/C7 systems
- PROFINET IO Devices/IO Controllers
- PROFINET CBA components

With it, all of the devices of an Ethernet network can be protected from unauthorized access. The CP 343-1 Advanced allows safe remote access over the Internet and allows data transfer between devices or network segments to be protected from data manipulation/espionage [1].

PROFINET CBA components and security functionalities can only be used alternatively.

[1] Available soon

2

■ **Application** (continued)

Secure VPN communication between SCALANCE S, SOFTNET Security Client and components with Security Integrated

■ **Design**

The CP 343-1 Advanced offers all the advantages of SIMATIC S7-300 system design:

- Compact design:
  - Three RJ45 jacks for connecting to Industrial Ethernet via two independent interfaces;
    one of which is a security jack for externally safeguarding the network cell;
    automatic data rate detection by means of the autosensing and autocross function;
    the connection is made via the IE FC RJ45 Plug 180 with 180° cable outlet or via a standard patch cable
  - 2-pin plug-in terminal strip for connection of the 24 V DC external supply voltage
  - Diagnostics LEDs for indicating the operational and communication status

- Simple installation;
  the CP 343-1 Advanced is mounted on the S7-300 rack and connected to adjacent modules by means of the bus connector. There are no slot rules.

- The CP 343-1 Advanced can be operated without a fan; no backup battery is required.

- In combination with IM 360/361, the CP 343-1 Advanced can also be used in an expansion rack (ER).

- The module can be replaced without the need for a programming device

- C-PLUG (configuration plug) is included in scope of delivery as a swap medium (cannot be operated without C-PLUG)

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-300

CP 343-1 Advanced

2

Function

- Two separate interfaces (integrated network separation):
  - Gigabit interface with an RJ45 port with 10/100/1000 Mbit/s full/half duplex with autosensing functionality
  - PROFINET interface with two RJ45 ports with 10/100 Mbit/s full/half duplex with autosensing and auto-crossover functionality via 2-port switch
- Communication services via both interfaces:
  - Open communication (TCP/IP, UDP, ISO): Multicast with UDP, including routing between both interfaces
  - PG/OP communication: across networks by means of S7 routing
  - S7 communication (client, server, multiplexing) including routing between both interfaces
  - IT communication: HTTP communication permits access to process data via own web pages. E-mail client function enables sending of e-mails direct from the user program.. FTP communication allows program-controlled FTP-client communication. Access to data blocks via FTP server.
- Communication services via PROFINET interfaces:
  - PROFINET IO Controller and IO Device with real-time properties (RT and IRT)
  - PROFINET CBA
  - IP address assignment via DHCP, simple PC tool or via program block (e.g. for HMI)
- Media redundancy (MRP):
  - Within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP
- Diagnostics and network management:
  - Extensive diagnostic functions for all modules in the rack
  - Integration into network management systems through the support of SNMP V1/V3
- Security mechanisms[1]:
  - Access protection by means of configurable IP access list
  - Firewall for filtering connections on the basis of their IP/port addresses
  - Limiting bandwidth to avoid communication overload
  - VPN server and VPN client for tap-proof access to controllers
  - Encrypted HTML pages via SSL (HTTPs)
  - Secure file transfer (FTPs)
  - Tap-proof transmission of network analysis information to the network management system (SNMP)
  - Conversion between private and public IP addresses (NAT/NAPT)
  - Secure transfer of the time (NTP V3)
- Configuration of all functions with STEP 7. The security functions [1] are configured using the Security Configuration Tool (SCT), that is included in the scope of delivery of STEP 7 V5.5 SP2 .
- Configuration with STEP 7 Professional V11 except configuration of security functions and CBA. The use of security functions and CBA is not possible with STEP 7 V11 (security functions are planned for later Version).
- Module replacement without programming device: all information is stored on the C-PLUG (also file system for IT functions)

■ Overview

ISO	TCP/ UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●	●	●	●	●

- Connection of SIMATIC S7-300/SINUMERIK 840D powerline to Industrial Ethernet
  - Multi-protocol operation with TCP and UDP transport protocol
  - Adjustable keep alive function
- Two separate interfaces (integrated network separation):
  - Gigabit interface with one RJ45 port with 10/100/1000 Mbit/s full/half-duplex with auto-sensing capability
  - PROFINET interface with two RJ45 ports with 10/100 Mbit/s full/half-duplex with auto-sensing and auto-crossover functionality via integrated 2-port switch

- Communication services via both interfaces:
  - Open communication (TCP/IP and UDP): Multicast with UDP, including routing between both interfaces
  - PG/OP communication:
    Cross-network by means of S7 routing
  - S7 communication (client, server, multiplexing) including routing between both interfaces
  - IT communication:
    HTTP communication supports access to process data via own Web pages;
    e-mail client function, sending of e-mails directly from user program;
    FTP communication supports program-controlled FTP client communication;
    access to data blocks through FTP server
- Communication services via PROFINET interfaces:
  - PROFINET IO-Controller and IO-Device with real-time properties (RT and IRT) [1]
  - PROFINET CBA
  - IP address assignment via DHCP, simple PC tool or via program block (e.g. for HMI)
  - Configuration with STEP 7
- Media redundancy (MRP);
  within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP (V2.2 or higher).
- Access protection by means of configurable IP access list
- Module replacement without programming device;
  all information is stored on the C-PLUG (also file system for IT functions)
- Extensive diagnostics functions for all modules in the rack
- IT communication
  - Web function
  - E-mail function
  - FTP
- Integration into network management systems through the support of SNMP V1 MIB-II

[1] Possible combinations in parallel mode:
  - IO-Controller with IRT and IO-Device with RT
  - IO-Controller with RT and IO-Device using IRT

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

SIPLUS CP 343-1 Advanced

■ **Overview** (continued)

SIPLUS CP 343-1 Advanced	
Order No.	**6AG1 343-1GX30-4XE0**
Order No. based on	**6GK7 343-1GX30-0XE0**
Ambient temperature range	0 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions.

Ambient conditions

Relative humidity	5 ... 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K
	658 ... 540 hPa (+3500 ... +5000 m) derating 20 K

[1] ISA-S71.04 severity level GX: Long-term load:
SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d):
SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

Overview

ERPC	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●					●	●

The CP 343-1 ERPC (Enterprise Connect) communication processor for connecting a SIMATIC S7-300 to Industrial Ethernet networks.

The CP supports:

- PG/OP communication
- S7 communication
- Open communication (SEND/RECEIVE)
- ERPC communication

Connection of the SIMATIC S7-300 to various database systems for vertical integration is supported by means of a firmware expansion from ILS-Technology to be ordered separately.

Benefits

g e t **Designed for Industry**

- Cost reductions through simply configured database connection by means of a firmware extension from the company ILS-Technology, to be ordered separately; no costly programming and no additional gateway PCs
- Optimum support of maintenance through
  - Web-based diagnostics
  - Remote programming via LAN/WAN (e.g. Internet)
  - Monitoring by network management tools (SNMP)
  - Module exchange without programming device using the C-PLUG swap medium
- Safeguarding of the system (security) against unauthorized access by means of device-related IP access list (IP-ACL); the capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 343-1 Advanced ensures investment protection
- The capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 343-1 ERPC ensures investment protection

Application

The CP 343-1 ERPC (Enterprise Connect) is used for connecting the SIMATIC S7-300 to Industrial Ethernet networks and to different ERP or MES systems for vertical integration by means of a firmware extension from the company ILS-Technology, to be ordered separately. With its own processor, the module relieves the CPU of communication tasks and facilitates additional connections.

The CP 343-1 ERPC permits communication of the S7-300 with:

- PGs/PCs
- Master computers
- HMI devices
- SIMATIC S5/S7/C7 systems
- ERP or MES systems by means of database interface, e.g. ORACLE, MySQL, MS-SQL, DB2 by means of a firmware extension from the company ILS-Technology, to be ordered separately

CP 343-1 ERPC

2

■ **Design**

The CP 343-1 ERPC offers all the advantages of the SIMATIC S7-300 design:

- Compact design;
 the rugged plastic enclosure features the following on the front panel:
 - RJ45 socket for connection to Industrial Ethernet; Automatic detection of data transfer rate by means of autosensing function;
 The RJ45 socket is designed to be industry-compatible with an additional sleeve for connection of the IE FC RJ45 Plug 145/180;
 Integral autocrossover function permits use of uncrossed connecting cables
 - 2-pin plug-in terminal strip for connection of the 24 V DC external supply voltage
 - Diagnostics LEDs for indicating the operational and communication status
- Easy installation;
 the CP 343-1 ERPC is mounted on the rail of the S7-300 and connected to the adjacent modules by means of the bus connectors. No slot rules apply.
- Fanless operation;
 no backup battery required.
- The CP 343-1 ERPC can also be used in the expansion rack (ER) in conjunction with the IM 360/361
- The C-PLUG (configuration plug) is included in the scope of delivery as replacement medium (operation without C-PLUG is not possible)

■ **Function**

- Gigabit interface with an RJ45 port with 10/100/1000 Mbit/s full/half duplex with autosensing and autocrossover functionality
- Communication services:
 - Communication services: Open communication (TCP/IP, UDP)
 - PG/OP communication: across networks by means of S7 routing
 - S7 communication (client, server)
 - ERPC communication by means of a firmware expansion from the company ILS-Technology, to be ordered separately. Connection to databases such as ORACLE, MySQL, MS-SQL, DB2 and Massage Queue systems.
 For further information on firmware expansion, refer to "deviceWISE Embedded Edition for SIMATIC S7".
- Diagnostics and network management:
 - Extensive diagnostic functions for all modules in the rack
 - Integration in network management systems through the support of SNMP V1
- Security mechanisms:
 - Access protection by means of configurable IP access list
- Configuration
 - For the configuration of the database connection, see "deviceWISE Embedded Edition for SIMATIC S7".
 - Configuration of the automation functionality with STEP 7 or STEP 7 Professional V11
- Module replacement without programming device:
 All information is stored on the C-PLUG

■ Integration

Example configuration of optimization of production process with CP 343-1 ERPC

Example configuration of archiving of quality data with CP 343-1 ERPC

PROFINET/Industrial Ethernet

■ **Technical specifications**

Order No.	6GK7 343-1FX00-0XE0
Product type designation	**CP 343-1 ERPC**
Data transmission rate	
Transmission rate at interface 1	10 … 1 000 Mbit/s
Interfaces	
Number of electrical connections	
• at interface 1 in accordance with Industrial Ethernet	1
• For power supply	1
Design of electrical connection	
• at interface 1 in accordance with Industrial Ethernet	RJ45 port
• For power supply	2-pin plug-in terminal strip
Design of the swap medium C-Plug	Yes
Supply voltage, current consumption, power loss	
Type of power supply	DC
Power supply	
• 1 from backplane bus	5 V
• External	24 V
Relative positive tolerance at 24 V DC	20 %
Relative negative tolerance at 24 V DC	15 %
Current consumed	
• from backplane bus at 5 V DC, typical	0.3 A
• from external power supply at 24 V DC	
- Typical	0.16 A
- Maximum	0.6 A
Effective power loss	14.7 W
Permitted ambient conditions	
Ambient temperature	
• with vertical installation during operating phase	0 … +40 °C
• with horizontal installation during operating phase	0 … +60 °C
• During storage	-40 … +70 °C
• During transport	-40 … +70 °C
Relative humidity at 25 °C without condensation during operation, maximum	95 %
IP degree of protection	IP20
Design, dimensions and weights	
Module format	Compact module S7-300 double width
Width	80 mm
Height	125 mm
Depth	120 mm
Net weight	0.8 kg

Order No.	6GK7 343-1FX00-0XE0
Product type designation	**CP 343-1 ERPC**
Performance data	
Performance data Open communication	
Number of possible connections for open communication by means of SEND/RECEIVE blocks, maximum	8
Data volume	
• As user data per ISO on TCP connection for open communication by means of SEND/RECEIVE blocks, maximum	8 KB
• As user data per TCP connection for open communication by means of SEND/RECEIVE blocks, maximum	8 KB
• As user data per UDP connection for open IE communication by means of SEND/RECEIVE blocks, maximum	2 KB
Number of multicast stations	8
Performance data S7 communication	
Number of possible connections for S7 communication	
• Maximum	8
• Note	plus 2 PG/OP connections and 1 diagnostics connection
Performance data Multiprotocol operation	
Number of active connections in multiprotocol mode	32
Performance data ERPC functions	
Number of possible connections for communication with ERP or MES stations, maximum	8
Maximum number of possible logical triggers per CP	8
Number of configurable ERPC symbols for database access	
• Per CPU, maximum	2 000
• Per logical trigger, maximum	255
Data quantity as user data and header information per logical trigger	8 KB
Product functions Management, configuration, programming	
Product function: MIB support	Yes
Protocol is supported	
• SNMP v1	Yes
• DCP	Yes
• LLDP	Yes
Configuration software required	STEP 7 version V5.4 SP5 and higher plus HSP
Identification & maintenance	
• I&M0 - device-specific information	Yes
• I&M1 - higher-level designation/ location designation	Yes

Overview

BACnet	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●					●	●

BACnet (**B**uilding **A**utomation and **C**ontrol **Net**works) is a communication protocol for data networks in building automation and control developed by ASHRAE (American Society of Heating, Refrigeration and Air Conditioning Engineers Inc.). It is equally suitable for both the management and automation level and is recognized as an ANSI, CEN and ISO standard.

The CP 343-1 BACnet is a communication processor for the connection of a SIMATIC S7-300 to the Industrial Ethernet and via the BACnet protocol it also permits the integration in systems that support the BACnet protocol

- 2 x RJ45 interfaces for 10/100 Mbit/s full/half duplex connection with autosensing/autonegotiation/autocrossover functionality
- Integrated 2-port switch
- The CP supports:
  - Open communication (SEND/RECEIVE)
  - PG/OP communication
  - S7 communication (server)
  - BACnet communication based on TCP/IP, BACnet server according to EN 16484, Part 5
- Extensive diagnostics functions via STEP 7
- Integration into network management systems through the support of SNMP V1 MIB-II

Benefits

g e get   Designed for Industry

- Direct integration of SIMATIC S7-300 into industrial plants or building systems by means of Industrial Ethernet/BACnet at up to 100 Mbit/s
- Protection of investment for existing systems through the integration of the SIMATIC S7-300 by means of open communication
- Flexible use thanks to absence of slot rules
- Optimum support of maintenance through
  - Remote programming via LAN/WAN (e.g. Internet)
  - Monitoring by network management tools (SNMP)
- Easy module replacement
- Reliable network connection through industry-standard device connection with IE FC RJ45 plug 145/180 and additional strain relief by latching the connector onto housing

Application

The CP 343-1 BACnet is the communication module for the connection of SIMATIC S7-300 to Industrial Ethernet and is used for the integration of the SIMATIC S7 into BACnet systems. Via BACnet communication, the CP can also communicate with a third-party system such as heating or ventilation controllers.

With its own processor, the module relieves the CPU of communication tasks and facilitates additional connections.

The CP 343-1 BACnet permits the S7-300 to communicate with:

- PG/PC
- HMI devices
- SIMATIC S5/S7/C7 systems

Possible fields of application:

- Industrial building automation
- HVAC (heating, ventilation and air conditioning) solutions using PLCs at the automation level
- Infrastructure markets
- Airports
- Tunnels
- Totally Integrated Automation (TIA)
- Totally Integrated Power (TIP)

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-300

CP 343-1 BACnet

■ Design

The CP 343-1 BACnet offers all the advantages of the SIMATIC S7-300 design:

- Compact design;
  the rugged plastic enclosure features the following on the front panel:
  - Two RJ45 sockets for connection to Industrial Ethernet/ BACnet;
    the RJ45 sockets are industrially compatible and designed with additional holding collars, for connecting the IE FC RJ45 Plug 145/180;
    automatic sensing of the data transmission rate by means of the Autosensing function;
  - 2-pin plug-in terminal strip for connection of the 24 V DC external supply voltage
  - Diagnostics LEDs for each port for indicating the operational and communication status
- Easy installation;
  the CP 343-1 BACnet is installed on the mounting rail of the S7-300 and is connected to adjacent modules via the bus connector. No slot rules apply.
- The CP 343-1 BACnet can be operated without a fan; no back-up battery is required.
- The CP 343-1 BACnet can also be used in the expansion rack (ER) in conjunction with the IM 360/361
- The module can be replaced without using a programming device

■ Function

The CP 343-1 BACnet independently handles data traffic via Industrial Ethernet and BACnet protocol. The module has its own processor and can be put into service directly using the unique preset Ethernet address (MAC) via the network.

Due to the support of the dynamic host configuration protocol (DHCP), the IP address can be assigned from a central DHCP server.

The CP 343-1 BACnet works in multi-protocol mode for the following communication services:

- PG/OP communication
  PG/OP communication allows all S7 stations connected to the network to be remotely programmed.
  - S7 routing;
    using S7 routing it is possible to use PG communication across networks.
- S7 communication
- Open communication (SEND/RECEIVE)
- A large number of stations can be accessed thanks to the multicast function
- Use of the socket interface in the partner system possible without RFC 1006
- Integral autocrossover function permits use of uncrossed connecting cables
- BACnet communication based on TCP/IP, BACnet server according to EN 16484, Part 5

Siemens completes its building control system DESIGO with the SIMATIC S7. DESIGO S7 introduces two new performance packages to building automation:

- Building Solution
- Building Integration

These enable projects to be implemented for "Industrial Building Automation" where programmable logic controllers (PLCs) are required at the automation level.

The DESIGO S7 Building Solution performance package permits the use SIMATIC S7 within a DESIGO system (control system for building automation) with an S7-HVAC library (**H**eating, **V**entilation and **A**ir Conditioning), that is based on the library of DESIGO PX. Communication with the DESIGO system is by means of BACnet. This permits efficient engineering of HVAC applications.

With DESIGO S7 Building Integration, existing SIMATIC S7 (software without HVAC library) components are efficiently integrated into a DESIGO system by means of BACnet communication.

BACnet communication

Based on TCP/IP, a BACnet server compliant with EN 16484, Part 5 is made available. The CP processes the protocol autonomously as far as possible so that the CPU is not burdened with the BACnet protocol. The CP 343-1 BACnet optionally supports:

- BACnet communication for any SIMATIC software by mapping SIMATIC data onto BACnet
- HVAC functions with BACnet communication by using corresponding function blocks;
  these HVAC function blocks are a component of the block library and are to be incorporated in the S7 user program.

2

■ **Function** (continued)

Linear structure with CP 343-1 BACnet with integral switch

BACnet consists of:

- Standardized services that are processed autonomously by the CP
- Standardized objects that present a user view of the automation

The actual configuration of the BACnet objects and their mapping to S7 data is performed by a BACnet mapping tool.

The configuration data of the BACnet objects generated by the mapping tool can be downloaded to the SIMATIC S7 using the general download function or using Delta download.
The mapping tool can be obtained free of charge from your local Siemens I BT office.

The standardized transport protocol UDP is used for BACnet, as it already has sufficient transport checking mechanisms available. Like TCP, UDP is a transport protocol, but unlike TCP it operates on a connectionless basis. BACnet devices may only work with the UDP port number permanently assigned to them. The UDP port number 47808 = 0xBAC0 is registered for BACnet.

The Ethernet IP addressing consists of the IP address, the subnet mask and the default gateway. BACnet devices within one subnet have the same subnet address. In the case of devices with integral BBMD functionality (**B**ACnet **B**roadcast **M**anagement **D**evice), e.g. DESIGO automation stations, DHCP – the automatic assignment of IP addresses in networks – is generally not permitted.

BACnet uses broadcast messages for the communication, i.e. all devices are addressed directly. As a rule, Ethernet IP routers block these broadcast messages so that a direct connection of Ethernet subnets is not possible. By using BBMD, broadcast messages can still be distributed.

Diagnostics

Extensive diagnostics options are available via NCM, including:

- Operating status of the CP
- General diagnostics and statistics functions
- Connection diagnostics
- LAN controller statistics
- Diagnostic buffer

Diagnostic options during operation

- Integration into network management systems through the support of SNMP V1 MIB-2 objects;
  this allows the current status of the Ethernet interface to be called up, e.g. for network management.

Configuration

STEP 7 V5.4 SP5 or higher and NCM S7 for Industrial Ethernet (supplied with STEP 7 V5.x) plus a hardware support package (HSP) are required for configuring the CP 343-1 BACnet. The configuration data of the CP is stored on the CPU. This means a module can be replaced without a PG. An additional "Building Integration" runtime license (reference number S55372-C107) is required in order to use the BACnet protocol on the module. Please contact your regional Siemens representative for ordering the license.

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-400

CP 443-1

Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●	●		●	●

Communication processor for connecting a SIMATIC S7-400 to Industrial Ethernet networks, also as PROFINET IO controller or in SIMATIC H systems.

The CP supports:

- PG/OP communication
- S7 communication
- Open communication (SEND/RECEIVE)
- PROFINET communication
- IT communication

The communication processor can also be used for redundant S7 communication in SIMATIC H systems and for fail-safe applications (PROFIsafe) in connection with an S7-400 F-CPU.

Benefits

- High plant availability through the support of media redundancy (MRP) and use in the SIMATIC S7-400 H system
- Optimum support of maintenance through
  - Web-based diagnostics
  - Remote programming via WAN or a telephone network (ISDN)
  - Monitoring by means of IT network management tools (SNMP)
  - Module exchange without programming device using the C-PLUG swap medium
- Securing the system against unauthorized access by means of
  - Central access protection for any devices within an automation cell, e.g. by means of authentication of the network stations
- The capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 443-1 ensures investment protection

Application

- The CP 443-1 is used to connect the SIMATIC S7-400 to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks and facilitates additional connections.

The CP 443-1 offers communication options with

- PGs/PCs
- Host computers
- HMI systems
- SIMATIC S5/S7/C7 systems
- PROFINET IO devices

Design

The CP 443-1 features all the advantages of the SIMATIC S7-400 design:

- Compact design:
  - Two RJ45 sockets for connecting to Industrial Ethernet; automatic data rate detection by means of the autosensing/autocrossover function; the connection is made via the IE FC RJ45 Plug 180 with 180° cable outlet or via a standard patch cable
  - Diagnostics LEDs for indicating the operational and communication status
- Easy installation:
  The CP 443-1 is mounted on the S7-400 rack and connected to the other modules via the backplane bus. No slot rules apply.
- The CP 443-1 can be operated without a fan
- The CP 443-1 can also be operated in the expansion rack (ER) in conjunction with the IM 460/461
- The module can be replaced without the need for a programming device

Function

- Two RJ45 ports with 10/100 Mbit/s full/half duplex with autosensing and autocrossover functionality via integral 2-port switch
- Communication services of the interface:
  - Open IE communication (TCP/IP and UDP): Multicast with UDP, including routing between both interfaces
  - PG/OP communication: across networks by means of S7 routing
  - S7 communication (client, server, multiplexing) including routing between both interfaces
  - S7-H communication for S7-400-H systems
  - PROFINET IO controller with real-time properties (RT and IRT)
  - IP address assignment via DHCP, simple PC tool or via program block (e.g. for HMI)
- Media redundancy (MRP):
  - Within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP
- Diagnostics and network management:
  - Extensive diagnostic functions for all modules in the rack
  - Integration into network management systems through the support of SNMP V1/V3
- Security mechanisms:
  - Access protection by means of configurable IP access list
- Configuration of all functions with STEP 7 V5.4
- Configuration with STEP 7 Professional V11
- Module replacement without programming device: All information can be stored on the CPU

Integration

Interfacing to higher-level network with CP 443-1
as PROFINET IO controller

Line structure at the superordinated control level through
integrated 2-port switch

Line structure as PROFINET IO controller with integrated
real-time switch

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-400

SIPLUS CP 443-1

2

■ Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●	●		●	●

- The connection for the SIMATIC S7-400 to Industrial Ethernet
  - 2 x RJ-45 interface for 10/100 Mbit/s full/half-duplex connection with auto-sensing/auto-negotiation and auto-crossover function
  - Integrated real-time switch ERTEC with two ports
  - Multi-protocol operation for ISO, TCP/IP, UDP and PROFINET IO protocols
  - Adjustable keep alive function
- Communication services:
  - Open communication (ISO, TCP/IP, and UDP)
  - PROFINET IO Controller with real-time properties RT and IRT
  - PG/OP communication: Cross-network by means of S7 routing
  - S7 communication
- Media redundancy (MRP);
  within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP.
- Multicast by UDP
- Access protection via configurable access list
- Support for fail-safe programmable controllers together with SIMATIC S7-400 CPU 416F-3PN/DP
- Module replacement without PG
- SIMATIC H system operation for redundant S7 communication
- Configuration with STEP 7
- Diagnostics possibilities in STEP 7 and Web browser
- Automatic CPU-clock setting via Industrial Ethernet with NTP or SIMATIC procedure
- Integration of network management systems via SNMP (MIB II diagnostic information)

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

SIPLUS CP 443-1	
Order No.	**6AG1 443-1EX20-4XE0**
Order No. based on	**6GK7 443-1EX20-0XE0**
Ambient temperature range	0 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions
Ambient conditions	
Relative humidity	5 ... 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range 795 ... 658 hPa (+2000 ... +3500 m) derating 10 K 658 ... 540 hPa (+3500 ... +5000 m) derating 20 K

[1] ISA-S71.04 severity level GX: Long-term load:
SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d):
SO_2 < 17.8 ppm; H_2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

SIPLUS CP 443-1 communication processor (medial exposure)	**6AG1 443-1EX20-4XE0**
For connecting SIMATIC S7-400 to Industrial Ethernet through TCP/IP, ISO and UDP; PROFINET IO Controller, MRP; integrated real-time switch ERTEC with two ports; 2 x RJ-45 interface; S7 communication, open communication (SEND/RECEIVE) with FETCH/WRITE, with and without RFC 1006, DHCP, SNMP V2, diagnostics, multicast, access protection over IP access list, initialization over LAN 10/100 Mbit/s with electronic manual on DVD	
Accessories	See CP 443-1

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-400

CP 443-1 Advanced

■ Overview

ISO	TCP/UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●	●	●	●	●

Communication processor for connecting a SIMATIC S7-400 to Industrial Ethernet networks, also as PROFINET IO controller or in SIMATIC H systems.

The CP supports:

- PG/OP communication
- S7 communication
- Open communication (SEND/RECEIVE)
- PROFINET communication
- IT communication

The communication processor can also be used for redundant S7 communication in SIMATIC H systems and for fail-safe applications (PROFIsafe) in connection with an S7-400 F-CPU. In addition, the CP 443-1 Advanced offers e-mail functions and user-created web pages and thus optimally supports maintenance and quality assurance. The Internet functions such as FTP even allow connection to the most diverse PC-based systems. Therefore, for the S7-400, this CP is the bridge between the field level and the MES level. The CP 443-1 Advanced connects seamlessly to the security structures of the office and IT world.

■ Benefits

get Designed for Industry

- Cost advantage due to connection to two separate Ethernet segments with integrated network separation
- High plant availability through the support of media redundancy (MRP) and use in the SIMATIC S7-400 H system
- Optimum support of maintenance through
  - Web-based diagnostics
  - Remote programming via WAN or a telephone network (ISDN)
  - Monitoring by means of IT network management tools (SNMP)
  - Module replacement without programming device using the C-PLUG swap medium
- Securing the system against unauthorized access [1] by means of
  - Central access protection for any devices within an automation cell, e.g. by means of authentication of the network stations
  - Secure remote access via the Internet by means of data encryption (VPN) and data integrity checking
  - Traceability by means of data logging on the basis of standard IT mechanisms (Syslog)
- The capability of later connecting existing SIMATIC S7 systems to Industrial Ethernet using the CP 443-1 Advanced ensures investment protection

[1] Available soon

2

■ Application

The CP 443-1 Advanced is used to connect the SIMATIC S7-400 to Industrial Ethernet networks. With its own processor, it relieves the CPU of communication tasks and facilitates additional connections.

The CP 443-1 Advanced provides the following communication options:

- PGs/PCs
- Master computers
- HMI systems
- SIMATIC S5/S7/C7 systems
- PROFINET I/O devices
- PROFINET CBA components

With it, all of the devices of an Ethernet network can be protected from unauthorized access. The CP 443-1 Advanced allows safe remote access over the Internet and allows data transfer between devices or network segments to be protected from data manipulation/espionage [1].

PROFINET CBA components and security functionalities can be used as an alternative.

Secure VPN communication between SCALANCE S, SOFTNET Security Client and components with Security Integrated

CP 443-1 Advanced

2

Design

The CP 443-1 Advanced offers all the advantages of SIMATIC S7-400 system design:

- Compact design:
  - Five RJ45 jacks for connecting to Industrial Ethernet via two independent interfaces; one of which is a security socket for externally safeguarding the network cell; automatic data rate detection by means of the autosensing and autocross function; the connection is made via the IE FC RJ45 Plug 180 with 180° cable outlet or via a standard patch cable
  - Diagnostics LEDs for indicating the operational and communication status

- Simple installation;
  the CP 443-1 Advanced is mounted on the S7-400 rack and connected to other modules by means of the backplane bus. There are no slot rules.

- The CP 443-1 Advanced can be operated without a fan.

- In combination with IM 460/461, the CP 443-1 Advanced can also be used in an expansion rack (ER).

- The module can be replaced without the need for a programming device

- C-PLUG (configuration plug) is included in scope of delivery as a swap medium (cannot be operated without C-PLUG).

Function

- Two separate interfaces (integrated network separation):
  - Gigabit interface with an RJ45 port with 10/100/1000 Mbit/s full/half duplex with autosensing functionality
  - PROFINET interface with four RJ45 ports with 10/100 Mbit/s full/half duplex with autosensing and autocrossover functionality via integrated 4-port switch

- Communication services via both interfaces:
  - Open IE communication (TCP/IP and UDP): Multicast with UDP, including routing between both interfaces
  - PG/OP communication: across networks by means of S7 routing
  - S7 communication (client, server, multiplexing) including routing between both interfaces
  - S7-H communication for S7-400-H systems
  - IT communication: HTTP communication permits access to process data via own web pages. E-mail client function enables sending of e-mails direct from the user program. FTP communication allows program-controlled FTP-client communication. Access to data blocks via FTP server.

- Communication services via PROFINET interfaces:
  - PROFINET IO controller with real-time properties (RT and IRT)
  - PROFINET CBA
  - IP address assignment via DHCP, simple PC tool or via program block (e.g. for HMI)

- Media redundancy (MRP):
  - Within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP

- Diagnostics and network management:
  - Extensive diagnostic functions for all modules in the rack
  - Integration into network management systems through the support of SNMP V1/V3

- Security mechanisms [1]:
  - Access protection by means of configurable IP access list
  - Firewall for filtering connections on the basis of their IP/port addresses
  - Limiting bandwidth to avoid communication overload
  - VPN server and VPN client for tap-proof access to controllers
  - Encrypted HTML pages via SSL (HTTPs)
  - Secure file transfer (FTPs)
  - Tap-proof transmission of network analysis information to the network management system (SNMP)
  - Conversion between private and public IP addresses (NAT/NAPT)
  - Secure transfer of the time (NTP V3)

- Configuration of all functions with STEP 7.
  The security functions [1] are configured using the Security Configuration Tool (SCT), that is included in the scope of delivery of STEP 7 V5.5 SP2.

- Configuration with STEP 7 Professional V11.
  The use of security functions and CBA is not possible with STEP 7 V11 (security functions are planned for later version).

- Module replacement without programming device:
  all information is stored on the C-PLUG (also file system for IT functions)

■ Overview

ISO	TCP/ UDP	PN	MRP	IT	IP-R	PG/OP	S7/S5
●	●	●	●	●	●	●	●

- The connection for the SIMATIC S7-400 to Industrial Ethernet
  - Multi-protocol operation for ISO, TCP/IP, UDP and PROFINET IO protocols
  - Adjustable keep alive function
- Two separate interfaces (integrated network separation):
  - Gigabit interface with one RJ45 port with 10/100/1000 Mbit/s full/half-duplex with auto-sensing capability
  - PROFINET interface with four RJ45 ports with 10/100 Mbit/s full/half duplex with autosensing and auto-crossover functionality via 4-port switch

- Communication services via both interfaces
  - Open communication (ISO, TCP/IP and UDP), multicast with UDP, including routing between both interfaces
  - PG/OP communication:
    Cross-network by means of S7 routing
  - S7 communication (client, server, multiplexing) including routing between both interfaces
  - IT communication:
    HTTP communication supports access to process data via own web pages;
    e-mail client function, sending of e-mails with authentication directly from user program;
    FTP communication supports program-controlled FTP client communication;
    access to data blocks through FTP server
- Communication services via PROFINET interface
  - PROFINET IO controller with real-time properties (RT and IRT)
  - PROFINET CBA
  - IP address assignment via DHCP, simple PC tool or via the user program (e.g. HMI)
  - Support of the prioritized startup of PROFINET IO Devices
  - Configuration with STEP 7
- Media redundancy (MRP);
  within an Ethernet network with ring topology, the CP supports the media redundancy procedure MRP.
- Access protection by means of configurable IP access list
- Module replacement without programming device;
  all information is stored on the C-PLUG (also file system for IT functions)
- Extensive diagnostics functions for all modules in the rack
- Integration into network management systems through the support of SNMP V1 MIB-II
- SIMATIC H system operation for redundant S7 communication
- Operation in fail-safe applications (PROFIsafe) in combination with SIMATIC S7-400 CPU 416F

Note:

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

PROFINET/Industrial Ethernet
Communication for SIMATIC S7-400

SIPLUS CP 443-2 Advanced

2

■ Overview (continued)

SIPLUS CP 443-1 Advanced	
Order No.	**6AG1 443-1GX20-4XE0**
Order No. based on	**6GK7 443-1GX20-0XE0**
Ambient temperature range	0 ... +60 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions

Ambient conditions	
Relative humidity	5 ... 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 ... +2000 m) see ambient temperature range
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K
	658 ... 540 hPa (+3500 ... +5000 m) derating 20 K

[1] ISA-S71.04 severity level GX: Long-term load:
$SO_2 < 4.8$ ppm; $H_2S < 9.9$ ppm; $Cl < 0.2$ ppm; $HCl < 0.66$ ppm; $HF < 0.12$ ppm; $NH < 49$ ppm; $O_3 < 0.1$ ppm; $NOX < 5.2$ ppm
Limit value (max. 30 min/d):
$SO_2 < 17.8$ ppm; $H_2S < 49.7$ ppm; $Cl < 1.0$ ppm; $HCl < 3.3$ ppm; $HF < 2.4$ ppm; $NH < 247$ ppm; $O_3 < 1.0$ ppm; $NOX < 10.4$ ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

■ Overview

Software	Hardware

► You will find software products on the SIMATIC NET/Windows CD.

► Development Kits are available for use in various operating system environments (e.g. for CP 1616 or CP 1604).

► As a rule, the necessary configuration tools are included in the software packages.

► Manuals in PDF format and extensive supplementary information on SIMATIC NET products and communication can be found in the SIMATIC NET Manual Collection which is enclosed with the software products.

SIMATIC NET
Manual Collection

CPs with an internal microprocessor

CP 1613 A2 (PCI)

CP 1623/
CP 1628 (PCIe)

CP 1616 (PCI)

CP 1604
(PC/104-Plus)

CP without an internal microprocessor

CP 1612 A2
(PCI 32 Bit)

G_IK10_XX_50183

CPs with an internal microprocessor

- Protocol software executes on the CP
- Free PC resources for applications
- Suitable for comprehensive applications
- Recommended for applications with HMI systems which have high performance requirements, e.g. WinCC
- Recommended for large systems (eight stations or more, e.g. SIMATIC)
- Constant communication throughput
- Can be used for redundant communication
- Use for PROFINET IO real-time applications (RT, IRT with CP 1616/CP 1604)
- Time synchronization

CPs without an internal microprocessor

- Protocol software executes on the PG/PC
- PC resources are divided between communications and applications
- Suitable for less comprehensive applications
- Recommended for smaller applications (up to eight stations, e.g. SIMATIC)
- Communications performance depends on PC resources and PC loading

PROFINET/Industrial Ethernet
System interfaces for PG/PC/IPC

G_IK10_XX_10319

Function overview of the communication modules with integral switch for SIMATIC PG/PC/IPC

2

■ Overview

The following communication processors are available for connecting to the programming device or PC:

- CPs with an internal microprocessor:
  - CP 1616 (PCI)
  - CP 1604 (PC/104-Plus)
  - CP 1613 A2 (PCI)
  - CP 1623 (PCIe)
  - CP 1628 (PCIe)

Data throughput of Industrial Ethernet

Comparisons between Layer-2 Ethernet cards and CP 1613 A2/CP 1623/CP 1628 show the respective communications throughput.

This throughput varies between 0 and the maximum throughput for Layer-2 Ethernet cards with the corresponding software packages.

When the CP 1613 A2/CP 1623/CP 1628 is used with software packages, the communications performance remains constantly at a high level and ensures fast response times without any variations.

Communication performance comparisons

Advanced PC Configuration

- Enables simple configuration of an OPC server
- Easy to handle thanks to automatic software installation (plug & play)
- Advanced PC configuration is included in the scope of supply of the communications software for the PC from Version 6.0 upwards; the configuration tool NCM PC as well as the configuration console are also supplied with it.

NCM PC

The PC can be configured either in STEP 7 or in NCM PC Version V5.1+SP2 and higher. Both tools offer the same look and feel and create the same database. This enables integrated configuring for the communication functions open communication and S7 communication. Data only has to be entered once and data consistency is assured.

- A configuration wizard integrated into NCM PC also supports user-driven configuration of the PC station.
- With NCM PC and STEP 7 from Version V5.1+SP2 upwards, a PC similar to a SIMATIC S7 station can be configured and loaded over a network. This applies both to the local station on which NCM PC or STEP 7 is installed and to the remote station that is addressed over the network.

Note:

NCM PC does not contain a conversion function for LDBs that were created using COML S7. Reconfiguration is necessary.

■ More information

SIMATIC PG/PC with integral Ethernet interface	SOFTNET PN IO	●	●	●	●	●	●	–	●	●	●	●	●	●	●	●	●	●	●

1) Use of these CPs requires porting of the Development Kit DK-16xx PN IO to the relevant operating system environment. You can order the DK-16xx PN IO at www.siemens.com/simatic-net/dk16xx on the Internet. It contains sample software for Linux Suse 12 and Windows XP Professional. For IRT operation an exclusive interrupt is necessary; this is not available in all slots. The additional use of CP 1616/CP 1604 is not approved for SIMATIC Industrial PC versions and integrated PROFINET interface.
2) possible with restrictions, if necessary, depending on memory expansion and processor capacity
3) requires at least 2 PCI or 2 PCIe slots (4-way redundancy requires 4 free PCI or 4 PCIe slots!); hybrid configurations with CP 1613 A2 (PCI) and CP 1623 (PCIe) are possible, depending on PC expansion
4) without 4-way redundancy as there are only 2 slots
5) depending on the slots of the selected PC version

Notes
- Please always note the supplementary conditions for the specified SIMATIC NET products that you can view on the Internet pages shown below.
- for further details on XP embedded, see http://support.automation.siemens.com/WW/view/de/21661049
- further details on system requirements and operating environments can be found in the Readme file of the communication products on the SIMATIC NET PC Software V8.1 CD
- Updates and supplements to the catalog entries, as well as the above tables can be viewed at http://www.siemens.com/simatic-net/ik-info

Connection options of Industrial Ethernet CPs to PG/PC/IPC

Overview

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
	●	●	●				

- PCI-104 module for connecting PCI-104 systems to PROFINET IO
- Full/half duplex with autonegotiation
- With Ethernet real-time ASIC ERTEC 400
- Integral 4-port real-time switch
- Communication services:
  - PROFINET IO controller and/or PROFINET IO device
  - Support of IRT in motion control applications
- High performance through direct memory access
- Integration in network management systems through the support of SNMP
- Comprehensive diagnostics possibilities for installation, start-up and operation of the module
- Powerful configuration tools are included in delivery of module

Benefits

get　Designed for Industry

- Connection of field devices to Industrial Ethernet with PROFINET
- Ideally suited for design of small local networks through integral 4-port real-time switch
- Direct memory access to process data by linking as PROFINET IO-Controller via IO-Base interface
- High computing power is available in the PC by taking the load off the host CPU by means of a real-time ASIC ERTEC 400 with support of the PROFINET real-time features RT and IRT
- Implementation in Motion Control applications thanks to support of IRT
- Simple transfer to various operating system environments using HARDNET-PN IO Development Kit
- Switch mode also with the PC switched off, via optional external power supply (in RT mode only)
- Uncrossed connecting cables can be used due to the integrated Autocrossover function

Application

The CP 1604 is used to connect PCI-104 systems to PROFINET IO.

The CP 1604 provides high-performance support for control tasks on the PC (PC based Control, Numeric Control, Robot Control).

With IRT (Isochronous Real-Time), the CP is ideally suited to time-critical applications that are in the range of strictly isochronous closed-loop control in the motion control sector.

The integrated 4-port switch supports low-cost system solutions and the configuration of different topologies.

The CP 1604 offers PCI-104 systems communications facilities with:

- PROFINET IO controller and/or PROFINET IO device

The HARDNET-PN IO Development Kit enables integration of the module into any operating systems.

Design

- Industrial Ethernet (via "Connection Board for CP 1604")
  - Ethernet real-time ASIC ERTEC 400
  - 4 x RJ45 connection
  - Integral 4-port real-time switch for 10/100 Mbit/s Ethernet
  - Half/full duplex
  - Autosensing/Autocrossover/Autonegotiation
- PC/104 Plus port:
  - PCI 2.2
  - 32 bits
  - 33 MHz or 66 MHz
  - Installation through PCI standard mechanisms (Plug & Play)
- Host interface/processor:
  - Dual-port RAM onboard
  - Flash for program memory onboard
  - ARM 946 RISK processor (32-bit) onboard for pre-processing
- Power supply:
  - Operating voltage: 5 V through PC/104 Plus
  - Optional external 24 V DC supply for switch operation when PC is switched off (through "Power Supply for CP 1604")
- Size:
  - PCI-104 format

Function

The CP 1604 can be operated as a PROFINET IO controller and/or PROFINET IO device that stores the process image (input and output data) in the memory area on the CP. With simultaneous controller and device mode, only the controller or the device can be operated in IRT mode. High-performance data transfer to and from the IO devices is performed autonomously by the CP 1604.

Real-time

Support of real-time properties of PROFINET for RT and IRT. The real-time properties of the CP 1604 ensure extremely short cycle times with highly accurate clock-pulse rates.

Switching

According to the industry requirements, the 4-port real-time switch additionally permits the configuration of line topologies with spur lines and makes external switch components unnecessary.

The switch function in RT mode is also available when the PC is turned off thanks to the possibility of independently supplying an external voltage (via "Power Supply for CP 1604").

PROFINET/Industrial Ethernet
Communication for PC-based systems

CP 1604

2

■ Function (continued)

Software packages

DK-16xx PN IO development kit

Driver and IO-Base software for CP 1604 as PROFINET IO-Controller and IO-Device under Linux in source code for transfer to any PC-based operating systems with IO-Base interface for:

- PROFINET communication:
  - PROFINET IO controller:
    Connection of field devices to Industrial Ethernet with PROFINET
  - PROFINET IO device:
    Link-up with a PROFINET IO controller through real-time communication according to the PROFINET standard
- Access in isochronous mode to real-time data for PROFINET over IRT;
  extremely short cycle times with highly accurate clock-pulse rates;
  jitter accuracy, isochronous mode, and cycle time enable high-performance motion control applications.
- Direct memory access to the process data;
  the process data of the IO-Devices are always consistent. The IO programming interface provides the PC programmer with function calls for data transfer.
- The design of the interface not only permits fast access as PROFINET IO controller, but also easy porting to other operating system environments (e.g. VXWorks, QNX, RMOS, RTX).
- The IO-Base interface for the PROFINET IO controller of the CP 1604 is compatible with the interface for SOFTNET PN IO
- The CP 1604 is functionally compatible to the CP 1616

Using the Development Kit DK-16xx PN IO, the CP 1604 communication processor can be integrated into any PC-based operating system environment. The Development Kit contains the driver and IO-Base source code required for this including the transfer instructions and also the example code which executes with SUSE Linux 10.

User interfaces

Programming interface through C library

- For applications that want to use the PROFINET IO-Controller or IO-Device functionality directly over C/C++, the IO-Base interface can be used. This interface is of a similar design to the DP Base interface of PROFIBUS modules CP 5613 and CP 5614. It is therefore possible to port existing PROFIBUS DP master applications to PROFINET IO-Controller applications.

Diagnostics data

Extensive diagnostic options are available via STEP 7 or SNMP, including:

- General diagnostics functions
- Connection diagnostics
- Diagnostics of the assigned PROFINET field devices
- Integration in network management systems through the support of SNMP

Configuration

Configuration of the CP 1604 is performed with STEP 7/NCM PC, V5.3 SP2 and higher. NCM PC is included with the module.

■ Integration

CP 1604 as PROFINET IO-Controller and PROFINET IO-Device

CP 1604 communication processor	**6GK1 160-4AA00**
PCI-104 card (32-bit) with ASIC ERTEC 400 for connecting PCI-104 systems to PROFINET IO with 4-port real-time switch (RJ45); incl. IO-Base software for PROFINET IO-Controller and NCM PC; single license for one installation, runtime software, software and electronic manual on CD-ROM, Class A, for 32-bit Windows XP Professional and Windows 7; other operating systems by means of DK-16xx PN IO Development Kit German/English	
CP 1604 Microbox Package	**6GK1 160-4AU00**
Package for implementing the CP 1604 in the SIMATIC Microbox PC; comprising the CP 1604, connection board, power supply and expansion racks for Microbox PC; for use with Development Kit DK-16xx PN IO; NCM PC	
Accessories	
Connection board for CP 1604	**6GK1 160-4AC00**
Connection board for CP 1604 with four RJ45 sockets incl. connecting cable	
Power supply for CP 1604	**6GK1 160-4AP00**
Redundant power supply for CP 1604 for operating the integral 4-port switch of the CP 1604 with the PC-104 system switched off; includes connecting cable	
Development Kit DK-16xx PN IO	See www.siemens.com/simatic-net/dk16xx
Software development kit for CP 1616/CP 1604; driver and IO-Base software for CP 1616/CP 1604 as PN IO controller and IO device in source code for transfer to other PC-based operating systems; including executable example code for SUSE Linux 10, Windows XP Professional and Windows 7	
IE TP Cord RJ45/RJ45	
TP cable 4 x 2 with 2 RJ45 connectors	
• 0.5 m	**6XV1 870-3QE50**
• 1 m	**6XV1 870-3QH10**
• 2 m	**6XV1 870-3QH20**
• 6 m	**6XV1 870-3QH60**
• 10 m	**6XV1 870-3QN10**
SCALANCE X204IRT	**6GK5 204-0BA00-2BA3**
Managed Industrial Ethernet switches; isochronous real time, LED diagnostics, error signaling contact with SET button, redundant power supply 4 x 10/100 Mbit/s RJ45 ports	

More information

The DK-16xx PN IO development kit can be found on the Internet at: www.siemens.com/simatic-net/dk16xx

Overview

ISO	TCP/ UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
	●	●	●				

- PCI module for connecting PCs and SIMATIC PGs/PCs to PROFINET IO (Universal Keyed 3.3 V and 5 V; 33 MHz/66 MHz; 32-bit, runs in 64-bit PCI-X systems)
- Full/half duplex with autonegotiation
- With Ethernet real-time ASIC ERTEC 400
- Integral 4-port real-time switch
- Communication services:
  - PROFINET IO controller and/or PROFINET IO device
  - Support of IRT in motion control applications
- High performance through direct memory access
- Integration in network management systems through the support of SNMP
- Comprehensive diagnostics possibilities for installation, start-up and operation of the module
- Powerful configuration tools are part of the scope of delivery of the module

Benefits

get Designed for Industry

- Connection of field devices to Industrial Ethernet with PROFINET
- Ideally suited for design of small local networks through integral 4-port real-time switch
- Direct memory access to process data by linking as PROFINET IO-Controller via IO-Base interface
- High computing power is available in the PC by taking the load off the host CPU by means of a real-time ASIC ERTEC 400 with support of the PROFINET real-time features RT and IRT
- Implementation in Motion Control applications thanks to support of IRT
- Simple transfer to various operating system environments using HARDNET-PN IO Development Kit
- Switch mode also with the PC switched off, via optional external power supply (in RT mode only)
- Uncrossed connecting cables can be used due to the integrated Autocrossover function

Application

The CP 1616 enables SIMATIC PGs/PCs and PCs equipped with a PCI slot to be connected to PROFINET IO.

The CP 1616 provides high-performance support for control tasks on the PC (PC-based control, numeric control, robot control).

With IRT (isochronous real-time), the CP is ideally suited to time-critical applications that are in the range of isochronous closed-loop control in the motion control sector.

The integrated 4-port switch supports low-cost system solutions and the configuration of different topologies.

The CP 1616 provides SIMATIC programming devices/PCs and industrial PCs with communication functions as:

- PROFINET IO controller and/or PROFINET IO device

The HARDNET-PN IO Development Kit enables integration of the module into any operating systems.

Design

- Industrial Ethernet
  - Ethernet real-time ASIC ERTEC 400
  - 4 x RJ45 connection
  - Integral 4-port real-time switch for 10/100 Mbit/s Ethernet
  - Half/full duplex
  - Autosensing/Autocrossover/Autonegotiation
- PCI interface:
  - PCI 2.2
  - 32-bit, for execution in 64-bit PCI X systems
  - 33 MHz or 66 MHz
  - Universal Keyed 3.3 V and 5 V
  - Installation through PCI standard mechanisms (Plug & Play)
- Host interface/processor:
  - Dual-port RAM on board
  - Flash for program memory onboard
  - ARM 946 RISK processor (32-bit) onboard for pre-processing
- Power supply:
  - Operating voltage: 5 V through PCI
  - Optional external 6 to 9 V DC supply for switch operation with PC switched off
- Size:
  - Short PCI format

PROFINET/Industrial Ethernet
Communication for PC-based systems

CP 1616

■ Function

The CP 1616 can be operated as a PROFINET IO controller and/or PROFINET IO device that stores the process image (input and output data) in the memory area on the CP. With simultaneous controller and device mode, only the controller or the device can be operated in IRT mode. High-performance data transfer to and from the IO devices is performed autonomously by the CP 1616.

Real-time

Support of real-time properties of PROFINET for RT and IRT. The real-time properties of the CP 1616 ensure extremely short cycle times with highly accurate clock-pulse rates.

Switching

According to the industry requirements, the 4-port real-time switch additionally permits the configuration of line topologies with spur lines and makes external switch components unnecessary.

The switch function is also available in RT mode when the PC is turned off thanks to the possibility of independently supplying an external voltage.

Software packages

DK-16xx PN IO development kit

Driver and IO-Base software for CP 1616 as PROFINET IO-Controller and IO-Device under Linux in source code for transfer to any PC-based operating systems with IO-Base interface for:

- PROFINET communication:
  - PROFINET IO controller:
    Connection of field devices to Industrial Ethernet with PROFINET
  - PROFINET IO device:
    Link-up with a PROFINET IO controller through real-time communication according to the PROFINET standard
- Access in isochronous mode to real-time data for PROFINET over IRT;
  extremely short cycle times with highly accurate clock-pulse rates;
  jitter accuracy, isochronous mode, and cycle time enable high-performance motion control applications.
- Direct memory access to the process data;
  the process data of the IO-Devices are always consistent. The IO programming interface provides the PC programmer with function calls for data transfer.
- The design of the interface not only permits fast access as PROFINET IO controller, but also easy porting to other operating system environments (e.g. VXWorks, QNX, RMOS, RTX).
- The IO-Base interface for the PROFINET IO controller of the CP 1616 is compatible with the interface for SOFTNET PN IO
- The CP 1616 is functionally compatible with the CP 1604

Using the Development Kit DK-16xx PN IO, the CP 1616 communication processor can be integrated into any PC-based operating system environment. The development kit contains the driver and IO-Base source code required for this including the transfer instructions, and also the example code which executes with SUSE Linux 10.

User interfaces

Programming interface through C library

For applications that want to use the PROFINET IO-Controller or IO-Device functionality directly over C/C++, the IO-Base interface can be used. This interface is of a similar design to the DP Base interface of PROFIBUS modules CP 5613 and CP 5614. It is therefore possible to port existing PROFIBUS DP master applications to PROFINET IO-Controller applications.

Diagnostics

Extensive diagnostic options are available via STEP 7 or SNMP, including:

- General diagnostics functions
- Connection diagnostics
- Diagnostics of the assigned PROFINET field devices
- Integration in network management systems through the support of SNMP

Configuration

Configuration of the CP 1616 is performed with STEP 7/NCM PC, V5.3 SP2 and higher. NCM PC is included with the module.

■ Integration

CP 1616 as PROFINET IO-Controller and PROFINET IO-Device

Overview

ISO	TCP/ UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
●	●	●		●	●	●	●

- PCI card (32 bit; 33 MHz/66 MHz; 3.3 V/5 V Universal Key) for the connection of PG/PC to Industrial Ethernet
- 1 x 10/100/1000 Mbit/s RJ45 port, electrical
- Automatic data transmission rate detection (10/100/1000 Mbit/s), with autosensing and autocrossover function
- Communication services via
  - PROFINET
  - ISO or TCP/IP transport protocol
  - PG/OP communication
  - S7 communication
  - Open communication (SEND/RECEIVE)
- Designed for use in industrial environments
- The appropriate OPC servers and configuration tools are included in the scope of supply of the respective communication software.

Benefits

g **get** Designed for Industry

- Low commissioning overhead due to plug & play and autosensing/autocrossover/autonegotiation (10/100/1000 Mbit/s)
- Particularly suitable for industrial use in PCs that require a smaller quantity structure and no integrated switching functionality
- Ideally suited to SOFTNET for Industrial Ethernet and SOFTNET PN IO
- Simple access to automation data via OPC as standard interface
- Uniform procedure and configuration functionality with NCM PC and STEP 7

Application

The CP 1612 A2 supports the connection to Industrial Ethernet (10/100/1000 Mbit/s) for SIMATIC PG/PC and PCs with a PCI slot. It is designed for use in an industrial environment and can be operated with all SOFTNET for Industrial Ethernet and SOFTNET PN IO packages.

Design

The CP 1612 A2 module (PCI card 32-bit; 33 MHz/66 MHz; 3.3 V/5 V Universal Key) is inserted directly into a SIMATIC PG/PC or in a PC and requires a PCI slot.

- 1 x RJ45 connection with 10/100/1000 Mbit/s (half/full duplex)
- Installation through PCI standard mechanisms (Plug & Play)

Function

The CP 1612 A2 offers the following accesses:

- Level 2:
  interface for PC networks in the industrial environment
- Level 4 and Level 7:
  economical access to Industrial Ethernet, e.g. to SIMATIC S5/S7 in connection with SOFTNET packages for Industrial Ethernet.

In addition, the protocols for Industrial Ethernet provided by the operating system are supported.

The IT functionality emerges in connection with the PC's Windows software.

User interfaces

OPC interface

The OPC server included in the respective software package can be used as the standard programming interface for the protocols S7 communication and open communication, in order to connect automation technology applications to OPC-compatible Windows applications (Office, HMI systems, etc.)

Diagnostics

- Integration into network management systems through the support of SNMP

Configuration

- The S7 communication and open communication protocols are configured in STEP 7 V5.1 SP3 or higher or NCM PC V5.1 SP2 or higher.
- The NCM PC configuration tool is included in the scope of delivery of the CP 1612 A2 software packages.
- NCM PC is an integral component of Advanced PC Configuration.

Overview

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
●	●			●	●	●	●

- PCI card (32 bit; 33 MHz/66 MHz; 3.3 V/5 V universal key) with microprocessor for connection of PG/PC to Industrial Ethernet with 10/100 Mbit/s Autosensing/Autonegotiation
- Communication services using
  - Open IE communication via TCP/IP and UDP)
  - ISO transport protocol
  - PG/OP communication
  - S7 communication
  - Open communication (SEND/RECEIVE)
- 15-pole ITP connection
- RJ45 connection
- Time synchronization
- ISO and TCP/IP transport protocol onboard
- SNMP-supported diagnostics
- The appropriate OPC server and configuration tools are included in the respective scope of supply of the communication software

Benefits

g e t   Designed for Industry

- Constant data throughput through protocol processing on the CP
- Can be connected to many devices through ITP or RJ45 connections on the module
- Free computing capacity for other applications on the PC e.g. HMI (ISO and TCP/IP transport onboard)
- Simple handling through Plug&Play and Autosensing (10/100 Mbit/s)
- Operation of large network configurations with a single card through high number of connections
- Can be used for redundant communication
- OPC as standard interface
- Uniform procedure and configuration functions for NCM PC and STEP 7

Network connection facilities for CP 1613 A2

■ Design

The module CP 1613 A2 (PCI card with 32-bit microprocessor; 33 MHz/66 MHz; 3.3 V/5 V Universal Key) is inserted directly into a SIMATIC PG/PC or into a PC and requires a short PCI slot. It is capable of running in 64-bit PCI-X slots (PCI 2.2 and PCI-X-compatible).

Ports:

- 15-pin Sub-D socket for ITP
- RJ45 jack for twisted pair
- Automatic recognition and selection of the interface during booting (ITP or RJ45)

The module is connected, for example,

- in the case of ITP via the ITP standard cable 9/15 to OSM/ESM
- in the case of TP via TP cord up to 10 m or via FastConnect system up to 100 m (IE FC RJ45 Plug and FC cables) to SCALANCE X or SCALANCE S

■ Function

User interfaces

OPC interface

As a standard programming interface for the S7 communication and open communication protocols, the OPC server contained in the respective software package can be used to connect the automation technology to OPC-compatible Windows applications (Office, HMI systems, etc.).

Programming interface through C library

The programming interfaces for the S7 communication, PG/OP communication, and open communication protocols for existing applications are implemented as Dynamic Link Library (DLL) interfaces.

You can find the released compilers in the Readme file of the SIMATIC NET CD products at www.siemens.com/automation/csi/net.

Software for PG/OP communication

This software supports the programming of SIMATIC S5 and S7 controllers over Industrial Ethernet in combination with STEP 5 / STEP 7 programmable controllers.

It is included in all CP 1613 A2 software packages.

Software for S7 communication (HARDNET-IE S7 or S7-REDCONNECT)

The S7 interface allows PG/PC applications (e.g. WinCC) and user programs to access the SIMATIC S7 system components. This provides easy, flexible access to the data of the SIMATIC S7 controller.

S7 communication offers:

Administrative services

- Connection management
- Mini database
- Trace

Data transfer services

- Read/write variables
- BSEND/BRECEIVE

H-communication

For redundant S7-communication with a fault-tolerant S7-400 H system, the CP 1613/CP1623 can be used in connection with the S7-REDCONNECT software.

Software for open communication (SEND/RECEIVE)

This interface is used for communication between

- PG/PC and SIMATIC S5
- PG/PC and SIMATIC S7
- PG/PC and PG/PC

Open communication (SEND/RECEIVE) offers the following services:

- Management services
- Connection establishment services
- Data transfer services

These functionalities are a component part of the HARDNET-IE S7 software product.

Mode of operation

Protocols up to Level 4 (Transport) are processed autonomously on the module.

16 MB of memory is available for this to support a large quantitative framework and reliable communication.

Data is exchanged between the module and the host in master mode. This means that the CP 1613 A2 accesses the physical RAM of the host.

A Windows driver is responsible for transferring data between the host system and the CP 1613 A2. The transmission rate to Industrial Ethernet is detected and automatically switched over (autosensing).

The IT functionality is provided in combination with the Windows software of the PC.

Diagnostics data

Via SNMP all MIB-2 objects can be read out. This enables the current status of the Ethernet interfaces to be retrieved.

Configuration

- The S7 communication and open communication protocols are configured in STEP 7 or NCM PC.
- The configuration tool NCM PC is included in the CP 1613 A2 software packages.
- NCM PC is a component part of Advanced PC Configuration.

■ Overview

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
●	●			●	●	●	●

- PCI Express Card (PCIe x1) with an internal microprocessor for connection of PG/PC to Industrial Ethernet
- 10/100/1000 Mbit/s (Autosensing/Autocrossover/Autonegotiation)
- Integrated 2-port switch (2 x RJ45 connection)
- Communications services via
  - Open IE communication (TCP/IP and UDP)
  - ISO transport protocol
  - PG/OP communication
  - S7 communication
  - Open communication (SEND/RECEIVE)
- Time synchronization
- ISO and TCP/IP transport protocol on board
- Integration into network management systems through the support of SNMP (V1)
- The appropriate OPC server and configuration tools are included in the scope of supply of the respective communication software.

■ Benefits

get Designed for Industry

- High plant availability thanks to
  - stable and constant data communication by means of protocol processing on the CP
  - Optional: redundant communication via intelligent CPs combined with fault-tolerant software package (S7-REDCONNECT)
- IT cost savings (e.g. no additional computer) and use of free computer capacity for further applications since high quantity structures and offloading of the host CPU can be implemented with the intelligent CPs
- Simple access to automation/diagnostic data via SNMP and OPC as standard interface
- Simple and low-cost commissioning thanks to plug & play and uniform procedure and configuration functionality with NCM PC and STEP 7
- Connection of additional field devices to the Industrial Ethernet by means of an additional switch port
- Switch operation possible via external power supply even with PC turned off

■ Application

The CP 1623 makes it possible to connect to the Industrial Ethernet (10/100/1000 Mbit/s) for SIMATIC PG/PC and PCs with PCI Express slot. Additional field devices can be flexibly connected to the Industrial Ethernet via the integrated switch.

System configuration with CP 1613 A2/CP 1623/CP 1628 and HARDNET-IE S7

Example of redundant network structure with CP 1613 A2/CP 1623 and HARDNET-IE S7-REDCONNECT

■ Design

Industrial Ethernet:
• 2 x RJ45 connection
• Integrated 2-port switch for 10/100/1000 Mbit/s (half/full/duplex)
• Autosensing/Autocrossover/Autonegotiation

PG/PC slot:
• PCI Express x1 card
• Can also be operated in PCIe x4-, x8- or x16 slots
• Installation via PCIe standard mechanisms (Plug & Play)

Power supply:
• Operating voltage 3.3 V/12 V via PCIe interface
• Optional external 12 - 24 V DC power supply for switch operation with PG/PC turned off

Size:
• Short PCIe format

PROFINET/Industrial Ethernet
Communication for PC-based systems

CP 1623

■ Function

User interfaces

OPC interface

As a standard programming interface for the S7 communication and open communication protocols, the OPC server contained in the respective software package can be used to connect the automation technology to OPC-compatible Windows applications (Office, HMI systems, etc.).

Programming interface via C-library

The programming interfaces for the S7 communication, PG/OP communication, and open communication protocols for existing applications are implemented as Dynamic Link Library (DLL) interfaces.

The released compilers can be found in the readme file of the SIMATIC NET CD products at
www.siemens.com/automation/csi/net

Software for PG/OP communication

This software makes it possible to program the SIMATIC S5 and S7 controllers via the Industrial Ethernet in conjunction with STEP 5/STEP 7 automation systems.

It is contained in all CP 1623 software packages.

Software for S7 communication (HARDNET-IE S7 or S7-REDCONNECT)

The S7 interface allows PG/PC applications (e.g. WinCC) and user programs to access the SIMATIC S7 system components. This makes for easy and flexible access to SIMATIC S7 data.

S7 communication offers:

Administrative services

- Connection management
- Mini database
- Trace

Data transfer services

- Read/write variables
- BSEND/BRECEIVE

H-communication

For redundant S7 communication with a fault-tolerant S7-400H system, the CP 1613/CP 1623/CP 1628 can be used in connection with the S7-REDCONNECT software.

Software for open communication (SEND/RECEIVE)

This interface is used for communication between

- PG/PC and SIMATIC S5
- PG/PC and SIMATIC S7
- PG/PC and PG/PC

Open communication (SEND/RECEIVE) offers the following services:

- Management services
- Dial-up services
- Data transfer services

These functionalities are a component part of the HARDNET-IE S7 software product.

Mode of operation

The protocols up to and including Level 4 (transport) are independently processed on the module.

The internal memory is available for this purpose and it also provides for a large quantity structure and high communication reliability.

The data exchange between the module and host is done in Master-Mode operation. This means the CP 1623 accesses the physical RAM of the host.

A Windows driver transfers the data between the host system and the CP 1623. The transfer rate to the Industrial Ethernet is detected and automatically switched (Autosensing).

The IT functionality emerges in connection with the PC's Windows software.

Diagnostics

All MIB-2 objects, for example, can be read out via SNMP. As a result, the current status of the Ethernet Interface can be called up.

Configuration

- The S7 communication and open communication protocols are configured in STEP 7 or NCM PC.
- The configuration tool NCM PC is included in the scope of supply of the CP 1623 software package.
- NCM PC is an integral component of advanced PC configuration.

■ **Application**

The CP 1628 makes it possible to connect SIMATIC PG/PC and PCs with PCI Express slot to the Industrial Ethernet (10/100/1000 Mbit/s). Additional field devices can be flexibly connected to the Industrial Ethernet via the integrated switch.

System configuration with CP 1613 A2/CP 1623/CP 1628 and HARDNET-IE S7

Example of redundant and secure network structure with CP 1628 and HARDNET-IE S7-REDCONNECT

Secure VPN communication between SCALANCE S, SOFTNET Security Client and components with Security Integrated

Design

Industrial Ethernet:

- 2 x RJ45 connection
- Integrated 2-port switch for 10/100/1000 Mbps (half/full duplex)
- Autosensing/Autocrossover/Autonegotiation

PG/PC slot:

- PCI Express x1 card
- Can also be operated in PCIe x4, x8 or x16 slots
- Installation via PCIe standard mechanisms (Plug & Play)

Power supply:

- Operating voltage 3.3 V/12 V via PCIe interface
- Optional external 12 - 24 V DC power supply for switch operation with PG/PC turned off

Size:

- Short PCIe format

Function

User interfaces

OPC interface

As a standard programming interface for the S7 communication and open communication protocols, the OPC server contained in the respective software package can be used to connect the automation technology to OPC-compatible Windows applications (Office, HMI systems, etc.).

Programming interface via C Library

The programming interfaces for the S7 communication, PG/OP communication, and open communication protocols for existing applications are implemented as Dynamic Link Library (DLL) interfaces.

The released compilers can be found in the readme file of the SIMATIC NET CD products at
www.siemens.com/automation/csi/net

Software for PG/OP communication

This software makes it possible to program the SIMATIC S5 and S7 controllers via the Industrial Ethernet in conjunction with STEP 5/STEP 7 automation systems.

It is contained in all CP 1628 software packages.

Software for S7 communication (HARDNET-IE S7 or HARDNET-IE S7-REDCONNECT)

The S7 interface allows PG/PC applications (e.g. WinCC) and user programs to access the SIMATIC S7 system components. This makes for easy and flexible access to SIMATIC S7 data.

S7 communication offers:

Administrative services

- Connection management
- Mini database
- Trace

Data transfer services

- Read/write variables
- BSEND/BRECEIVE

H-communication

For redundant S7 communication with a fault-tolerant S7-400H system, the CP 1613/CP1623/CP 1628 can be used in connection with the HARDNET-IE S7-REDCONNECT software.

Software for open communication (SEND/RECEIVE)

This interface is used for communication between

- PG/PC and SIMATIC S5
- PG/PC and SIMATIC S7
- PG/PC and PG/PC

Open communication (SEND/RECEIVE) offers the following services:

- Management services
- Dial-up services
- Data transfer services

These functionalities are a component part of the HARDNET-IE S7 software product.

Security mechanisms

Integrated security mechanisms enable safeguarding of important computer systems, including their associated data communication systems:

- Stateful Inspection Firewall for filtering connections on the basis of their IP/port addresses
- Limiting bandwidth to avoid communication overload
- Secure and encrypted access to controllers or remote access over the Internet by means of VPN Server and VPN Client and checking of data integrity
- Tap-proof transmission of network analysis information to the network management system (SNMP V3)
- Secure transfer of the time (NTP V3)
- Traceability by means of data logging on the basis of standard IT mechanisms (Syslog)

Mode of operation

The protocols up to and including Level 4 (transport) are independently processed on the module.

The internal memory is available for this purpose and it also provides for a large quantity structure and high communication reliability.

The data exchange between the module and host is done in Master-Mode operation. This means that the CP 1628 accesses the physical RAM of the host.

A Windows driver transfers the data between the host system and the CP 1628. The transfer rate to the Industrial Ethernet is detected and automatically switched (Autosensing).

The IT functionality emerges in connection with the PC's Windows software.

Diagnostics

All MIB-2 objects, for example, can be read out via SNMP. This enables the current status of the Ethernet interfaces to be retrieved.

Configuration

- The S7 communication and open communication protocols are configured in STEP 7 or NCM PC.
- The configuration tool NCM PC is included in the scope of supply of the CP 1628 software package.
- NCM PC is an integral component of advanced PC configuration.

Design of electrical connection	
• at interface 1 in accordance with Industrial Ethernet	RJ45 port
• of the backplane bus	PCI Express x1
• for power supply	2-pin terminal block
Supply voltage, current consumption, power loss	
Type of power supply	DC
Type of power supply optional external supply	Yes
Supply voltage	
• 1 from backplane bus	3.3 V
• 2 from backplane bus	12 V
• External	24 V
- Minimum	10.5 V
- Maximum	32 V
Remark on supply voltage	-
Relative symmetrical tolerance	
• at 3.3 V in the case of DC	9 %
• at 12 V in the case of DC	8 %
• at 24 V in the case of DC	33 %
Current consumed	
• 1 from backplane bus with DC max.	0.85 A
• 2 from backplane bus with DC max.	0.4 A
• from external supply voltage	
- at 12 V with DC max.	0.55 A
- at 24 V with DC max.	0.3 A
Effective power loss	7.6 W
Effective power loss with switch mode max.	7.2 W
Permissible ambient conditions	
Ambient temperature	
• During operation	5 to 55 °C
• During storage	-20 to +60 °C
• During transport	-20 to +60 °C
Relative humidity at 25 °C without condensation during operation, maximum	95 %
IP degree of protection	IP00

Order no.	6GK1 162-8AA00
Product type designation	CP 1628 [1]
Design, dimensions and weights	
Module format	PCI Express x1 (half length)
Width	18 mm
Height	111 mm
Depth	167 mm
Net weight	0.124 kg
Product properties, functions, components General	
Number of plug-in cards of same design which can be inserted per PC station	4
Remark on number of modules	-
Performance data	
Performance data open communication	
Software required for open communication by means of SEND/RECEIVE	Yes, HARDNET-IE S7
Number of possible connections for open communication by means of SEND/RECEIVE, maximum	120
Performance data S7 communication	
Software required for S7 communication	Yes, HARDNET-IE S7
Maximum number of possible connections for S7/PG communication	120
Performance data multiprotocol operation	
Number of active connections in multiprotocol mode	120
Number of configurable connections per PC station	207
Product functions Management, configuration, programming	
Product function: MIB support	Yes
Protocol is supported	
• SNMP v1	Yes
• SNMP v3	Yes
• DCP	Yes
Configuration software	
• Required	NCM PC included in the scope of scope of delivery
Identification & maintenance	
• I&M0 - device-specific information	Yes
• I&M1 - plant designation/location designation	Yes

PROFINET/Industrial Ethernet
Communication for PC-based systems

HARDNET-IE S7-REDCONNECT

Overview

System configuration for S7-REDCONNECT

ISO	TCP/UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
●				●	●	●	

- For connecting PCs over redundant Industrial Ethernet to the SIMATIC S7-400H
- Protected from communication failures arising from a fault in the double bus or in redundant rings
- For redundant Layer 2 or Layer 3 Industrial Ethernet
- Can also be implemented in non-redundant networks
- No additional programming overhead for the PC and in H systems
- The appropriate OPC server and configuration tools are included in the scope of supply of the respective communication software
- Enhanced redundancy over 4-way communication (STEP 7 V5.1 + SP4 and higher)

Benefits

get **Designed for Industry**

- Protects against communication failures arising from a fault in the double bus or in redundant rings
- Simplifies communication between a PC application and the SIMATIC S7-400H system
- Secures the investment thanks to the use of existing applications and flexible application options
- No additional programming overhead for the PC and in H systems
- Increases the availability of the PC application (e.g. PCS 7) thanks to redundant Layer 2 or Layer 3 communication

Application

The HARDNET-IE S7-REDCONNECT software package connects the SIMATIC S7-400H with applications on the PC such as WinCC.

A redundant Industrial Ethernet is typically used. The software package can also be used if SIMATIC H systems are operated on non-redundant networks.

Combined operation of redundant and single systems is also possible.

Design

The following components are required to design a SIMATIC H system with PC connection

PC with:
- up to four CP 1613 A2/CP 1623/CP 1628 and HARDNET-IE S7-REDCONNECT to connect the PC to Industrial Ethernet with ISO or ISO on TCP protocol

S7-400H with:
- CP 443-1 to connect the S7-400H to Industrial Ethernet with ISO or ISO on TCP protocol
- STEP 7 V5.0 or higher for programming

2

■ Function

- HARDNET-IE S7-REDCONNECT contains the functional scope of the HARDNET-IE S7 software package (S7-communication, open communication and PG/OP communication) as well as additional redundant communication over S7 connections. No additional license is required for HARDNET-IE S7.
- Open communication
- Time synchronization
- Existing Windows applications can be used
- Services for monitoring the redundant communication
- Diagnostic tool for visualizing the communication status
- Simple redundancy over 2-way communication (STEP 7 V5.0 SP2 and higher)
- Enhanced redundancy over 4-way communication (STEP 7 V5.1 + SP4 and higher)

Fault-tolerant S7 communication is carried out via a standard connection and a standby connection. These are monitored during operation and switched in the event of a fault. With HARDNET-IE S7-REDCONNECT, these remain hidden from the PC application.

Fault detection, changeover (if required), communication monitoring, and synchronization are all invisible to the application.

The application, e.g. WinCC, communicates with both subunits of the S7-400H as with an S7-CPU.

User interfaces

OPC interface

As a standard programming interface for the S7 communication and open communication protocols, the OPC server contained in the respective software package can be used to connect the automation technology to OPC-compatible Windows applications (Office, HMI systems, etc.).

Configuration

- The S7 communication and open communication protocols are configured in STEP 7 NCM PC V5.1 SP2 or higher.
- The NCM PC configuration tool is included in the scope of supply of the HARDNET-IE S7-REDCONNECT software for Industrial Ethernet.
- NCM PC is a component part of Advanced PC Configuration.

Overview

System configuration SOFTNET for Industrial Ethernet

ISO	TCP/ UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
●	●			●	●	●	

- Software for coupling programming devices/workstations to automation systems
- Communication services:
  - PG/OP communication
  - S7 communication
  - Open communication (SEND/RECEIVE)
- Can be used with
  - Layer 2 Ethernet card (PCI/PCIe)
  - Integrated Industrial Ethernet interface, e.g. CP 1612 A2
  - Modem (Remote Access Service RAS)
- Complete protocol stack as a software package
- Increased availability thanks to additional option packages such as OPC Server Redundancy

Benefits

- Maximum transparency due to integrated communication with SIMATIC via Industrial Ethernet and OPC as the standard interface
- Low-cost solution for industrial use in PCs that require smaller quantity structures
- Simple and low-cost commissioning thanks to uniform procedure and configuration functionality with NCM PC and STEP 7
- Increased availability of the plant information by means of redundant SIMATIC NET OPC server

Application

With SOFTNET for Industrial Ethernet, PC/PG and workstations can be connected to programmable controllers, such as SIMATIC S7, over Industrial Ethernet.

The following user interfaces are available:

- PG/OP communication for SIMATIC S7
- Open communication (SEND/RECEIVE) for communication with SIMATIC S5 and S7
- S7 communication

SOFTNET is available for the following interfaces:

- Layer 2 Ethernet card (PCI/PCIe)
- integrated Industrial Ethernet interface
- Modem/ISDN (Remote Access Service RAS)

Function

With SOFTNET, the complete protocol stack is processed in the PC.

This architecture means that in contrast to the CP 1613 A2/ CP 1623/CP 1628 communication processors, the performance of the SOFTNET packages is dependent on the configuration or capacity utilization of the PC used.

The IT functionality is established in connection with the interfaces and the PC's Windows software.

User interfaces

OPC interface

As a standard programming interface for the S7 communication and open communication protocols, the OPC server contained in the respective software package can be used to connect the automation technology to OPC-compatible Windows applications (Office, HMI systems, etc.).

Software for PG/OP communication

This software makes it possible to program the SIMATIC S5 and S7 controllers via the Industrial Ethernet in conjunction with STEP 5/STEP 7.

Software for S7 communication

SIMATIC S7 system components communicate with each other using S7 communication functions.

The S7 communication can be based optionally on the ISO protocol or the TCP/IP protocol.

S7 communication offers the following services:

- Administrative services
- S7 connection management services
- Variable services
- VFD (Virtual Field Device) services
- Trace and mini database

PROFINET/Industrial Ethernet
Communication for PC-based systems

SOFTNET for Industrial Ethernet

■ Function (continued)

Open communication (SEND/RECEIVE)

This interface based on Layer 4 (ISO Transport or TCP/IP with RFC 1006) is used for communication between

- PG/PC and SIMATIC S5
- PG/PC and SIMATIC S7
- PG/PC and PG/PC

Open communication (SEND/RECEIVE) offers the following services:

- Management services
- Dial-up services
- Data transfer services

Configuration

- The complete configuration of the S7 communication and open communication protocols takes place in STEP 7 or SIMATIC NCM PC V5.1 SP2 or higher.
- The NCM PC configuration tool is included in the scope of delivery of the corresponding packages.

PROFINET/Industrial Ethernet
Communication for PC-based systems

SOFTNET PN IO

■ **Overview**

PC with SOFTNET PN IO as PROFINET IO Controller

ISO	TCP/ UDP	PN	MRP	OPC	PG/OP	S7/S5	IT
	●	●		●			

- Software with PROFINET IO Controller function for coupling PG/PC and IPC with PROFINET IO Devices
- Possible applications:
  - PC-based control systems
  - HMI systems
  - Test applications
- Communication services:
  - PROFINET IO Controller
- Can be used with
  - Integrated interfaces of SIMATIC PG/PC
  - You can find more information about the environment of use at
    www.siemens.com/simatic-net/ik-info
- Cost-effective solution for the low-end performance range
- OPC server for I/O interfacing over PROFINET included in scope of supply

■ **Benefits**

get Designed for Industry

- Cost-effective interfacing of field devices to Industrial Ethernet with PROFINET
- Simple porting of the application with OPC as a standard interface
- High-performance IO data access through RT Base interface for linking into C/C++ applications
- Simple changeover from PROFIBUS modules CP 5613 A2/ CP 5614 A2 with DP-Base interface to PROFINET through IO-Base interface
- Uniform procedure and configuration functions for NCM PC and STEP 7

Application

Using SOFTNET PN IO, PCs can be linked with PROFINET field devices including PC-based PN IO devices (e.g. with CP 1616 or CP 1604) via Industrial Ethernet.

SOFTNET PN IO is available for the following interfaces:

- CP 1612 A2
- Integrated interfaces of SIMATIC PG/PC

Function

PROFINET communication

PROFINET IO controller

Connection of field devices to Industrial Ethernet with PROFINET

User interfaces

OPC interface

The supplied OPC server can be used as a standard programming interface for PROFINET IO Controller to link automation applications to OPC-capable Windows applications (Office, HMI systems, etc.).

Programming interface via C Library

For applications that want to use the PROFINET IO Controller functionality directly over C/C++, the IO-Base interface can be used. In terms of design, this interface is based on the DP base interface of the PROFIBUS modules CP 5613 A2 and CP 5614 A2. Therefore, the porting of existing PROFIBUS DP master applications to PN IO Controller applications is also possible and easy.

The released compilers can be found in the readme file of the SIMATIC NET CD products at www.siemens.com/automation/csi/net.

SOFTNET PN IO and CP 1616 use compatible functions of the IO-Base interface.

Mode of operation

For SOFTNET, the entire protocol stack is handled in the PC. This architecture means that the performance depends on the configuration of the PC used or the loading on the PC.

Configuration

The configuration is done in STEP 7/NCM PC as of V5.3 SP1

Technical specifications

Product type designation	SOFTNET PN IO
Performance data

PROFINET/Industrial Ethernet
Communication for PC-based systems

OPC server for Industrial Ethernet

Overview

System integration with OPC server

OPC (**O**penness, **P**roductivity & **C**ollaboration) is a standardized, open, and vendor-independent interface that is widely used in automation.

A fundamental distinction is made between the classic OPC and its consistent further development OPC UA (**U**nified **A**rchitecture). Smooth migration to the new OPC UA standard is easily possible; this offers further value added, such as security. The SIMATIC NET OPC servers offer the two interfaces OPC UA and classic OPC for SIMATIC S7 and PROFINET.

- The appropriate OPC servers are included in the scope of supply of the respective communication software
- Standardized, open multi-vendor interface
- It permits interfacing of OPC-capable Windows applications to S7-communication, open communication (SEND/ RECEIVE), PROFINET and SNMP.
- Increased availability thanks to additional option packages such as OPC server redundancy
- OPC Scout with browser functionality as an OPC client and OCX Data Control/.NET Data Control for simple OPC client creation

Benefits

get **Designed for Industry**

- Simple use of different networks and protocols through uniform interface
- Reduced training and familiarization overhead
- Increased availability of the plant information by means of redundant SIMATIC NET OPC server
- Simple integration into the system environment and office applications via C++, Visual Basic- and .NET interfaces
- Short setup times for applications
- Simple handling and cost effective since the appropriate OPC servers are included in the scope of supply of the respective communication software

2

Application

The basic principle of OPC is that OPC client applications communicate with the OPC server over a standardized, open and manufacturer-independent interface.

It is also possible to connect to OPC-capable Windows applications (Microsoft Office or HMI systems) that are already available on the market.

The following communication possibilities are available for Industrial Ethernet with OPC server:

- S7 communication
- Open communication (SEND/RECEIVE)
- PROFINET
- SNMP (Simple Network Management Protocol)

The OPC server offers, for example:

- Data Access interfaces 2.0, 2.05a and 3.0
- Alarm and event interface 1.1
- OPC XML DA interface 1.0
- Integration of automation products of different manufacturers
- Uniform, easy user interface for different components
- Can be accessed from every computer in the LAN
- High-performance data access over the Custom Interface (C++, NET)
- Easy to use with the "Automation Interface" (VB, NET) or the supplied OCX Data Control or .NET Data Control
- Grouping of variables (Items); which allows a large quantity of data to be pre-processed in a short time.
- Optional redundancy expansion for S7 communication

Function

- Open standardization of the addressing using logical names for objects from an automation component or an automation system
- Supports STEP 7 symbols
- Efficient data transfer from a process component to an application for further processing
- One client application can use several servers simultaneously
- Simultaneous execution of more than one client is possible on one OPC server
- Communication protocols can be used in parallel by means of the multiplexer function

- Interfaces
  - "Custom Interface" for high-performance C++/NET applications
  - "Automation Interface" for easily created Visual Basic applications (or similar)
  - XML DA interface;
    Data access to S7 CPUs is therefore possible over the Internet.
  - OCX Data Control or .NET Data Control for direct integration in Windows applications that support COM/DCOM

Comparison of conventional client/server architecture with an OPC architecture

Configuration

The communication parameters are configured using only the tools of the installed software Advanced PC Configuration (configuration console, SIMATIC NCM PC or from STEP 7 V5.1 + SP2); SIMATIC iMAP is used for PROFINET CBA.

PROFINET/Industrial Ethernet
Communication for PC-based systems

OPC server for Industrial Ethernet

2

▮ Technical specifications

Product type designation	OPC server for Industrial Ethernet
Programming	• Synchronous and asynchronous reading and writing of variables • Monitoring of variables using the OPC server with a signal to the client when a change occurs • Use of quantity operations; so a large amount of data can be processed in a short time.
Interfaces	• Custom Interface (C++, NET) for high OPC performance • Automation Interface (VB, Excel, Access, Delphi, ...) for ease-of-use • Graphics with OCX or .NET Data Control; for configuring instead of programming • OPC XML-Interface for Data Access
Products	**include OPC servers for:**
Industrial Ethernet	
• HARDNET-IE S7, SOFTNET-IE S7, SOFTNET-IE S7 Lean	S7-OPC server for S7 communication, XML-DA S5-OPC server for open communication [1] communication, XML-DA
• SNMP OPC server	SNMP OPC server for SNMP protocol access; XML-DA
• S7 OPC Redundancy	Redundant S7-OPC server for S7 communication
PROFINET	
• SOFTNET-IE PN IO	PN IO OPC server for PROFINET IO communication; XML-DA
PROFIBUS	
• HARDNET-PB DP, SOFTNET-PB DP, SOFTNET-PB DP slave	DP-OPC server for PROFIBUS DP communication; XML-DA
• FMS-5613	FMS-OPC server for P ROFIBUS FMS communication; XML-DA
• HARDNET-PB S7, SOFTNET-PB S7	S7-OPC server for S7 communication, XML-DA
• S7 OPC Redundancy	Redundant S7-OPC server for S7 communication

2

Overview

OPC (**O**penness, **P**roductivity & **C**ollaboration) is a standardized, open, and vendor-independent interface that is widely used in automation. OPC UA (**U**nified **A**rchitecture) is the result of consistent further development of this standard, offering additional functions such as security or redundancy.

S7 OPC Redundancy is a software product compliant with the OPC UA standard that enables the redundant configuration of OPC UA servers to SIMATIC S7. The availability of automation data to operator control and monitoring systems is guaranteed thanks to the redundant use of OPC UA servers. This requires neither additional cabling for synchronizing the redundant OPC UA servers, nor additional programming overhead in the PC. The OPC UA servers are synchronized via high-performance Industrial Ethernet network access points at 10/100 and 1000 Mpbs. S7 OPC Redundancy represents an integrated customer solution for all SIMATIC NET S7 SOFTNET and HARDNET software products in the automation world.

Benefits

- Enhanced plant availability thanks to redundant OPC UA servers that guarantee plant access for operator control and monitoring systems
- Secures investments thanks to the use of existing applications (OPC clients) and flexible application options, regardless of the SIMATIC S7 controller used
- Improved utilization of IT resources thanks to even distribution of the OPC clients among the redundant OPC servers
- Easy and low-cost commissioning thanks to uniform procedure and configuration functionality with NCM PC and STEP 7

Application

The redundant OPC UA server software enables redundant configuration of SIMATIC NET OPC UA servers. Failure of one OPC UA server, as a result of power outage or system failure, for example, results in immediate use of the other OPC UA server, and continuation of the existing OPC UA client connection. This ensures increased availability of automation data to operator control and monitoring systems.

Design

Redundant use of OPC servers

A redundant OPC UA server system comprises the following:

Server PC with

- Operating system for Windows server
- SOFTNET-IE S7 or HARDNET-IE S7 software based on OPC UA server
- S7 OPC Redundancy software

The redundant operation of up to two OPC UA servers is possible.

Client PC (HMI)

- Software for OPC clients that supports OPC UA (incl. reconnect functionalities in accordance with OPC UA specification)

The communication parameters are configured using STEP 7 or SIMATIC NET NCM PC. The NCM PC configuration tool is included in the scope of delivery of the SIMATIC NET PC products.

S7 OPC Redundancy for Industrial Ethernet

2

■ Function

S7 OPC Redundancy enables the setup of redundant OPC UA servers, thus ensuring plant access for the operator control and monitoring systems.

This means, for example, that the information synchronization between two SIMATIC NET S7 OPC servers via the S7 OPC Redundancy software package is guaranteed. This is handled transparently for the OPC Client application so that in the event of a fault, the redundant OPC server takes over the tasks from the failed OPC server system.

Data exchange between the OPC clients and the OPC servers takes place via the standardized OPC UA communication. Communication with the SIMATIC S7 controller takes place using the S7 protocol. This is ensured by the software products SIMATIC NET SOFTNET or HARDNET-S7 for Industrial Ethernet that are necessary as the basis for SIMATIC NET IE S7 OPC Redundancy.

The S7 OPC Redundancy software package supports:

- High availability;
  Failure of one OPC UA server results in immediate use of the other OPC UA server, and continuation of the existing OPC UA client connection. The basis for this is the OPC UA synchronization that ensures synchronization of the necessary client information.

- Load compensation;
  Even distribution of OPC clients among the available OPC servers

Configuration

All configuration is performed with STEP 7 or SIMATIC NCM PC, V5.5 SP1 or higher. The NCM PC configuration tool is included in the scope of delivery of the corresponding packages.

2

Overview

- Status monitoring of SNMP-capable devices in any OPC client systems; e.g. SIMATIC WinCC/PCS 7
- Easy access to SNMP-capable devices over the OPC interface
- Devices without SNMP agents can be monitored using the ping mechanism
- Configuring with STEP 7 or NCM PC
- Ready-to-use SNMP diagnostics profiles for Siemens devices, e.g. SCALANCE X/W
- Generation of any SNMP diagnostics profiles by means of the integral MIB compiler
- Easy setup of the monitored devices with the help of an autodiscovery function

Benefits

- Network view and process view in a single system
- Easy network diagnostics in SIMATIC HMI/SCADA systems and office applications
- Easy configuration and engineering without the need for detailed knowledge of SNMP: embedded in the SIMATIC tool landscape
- It can operate in parallel with other communication protocols

Application

The SNMP OPC server makes data available for the administration of TCP/IP networks for any OPC client systems.

SNMP (Simple Network Management Protocol) is a protocol that has been specifically designed for administration of TCP/IP networks. The individual nodes in the network (network components or data terminals) are equipped with a so-called SNMP agent that provides information in structured form.

OPC (Openness, Productivity & Collaboration) provides a standardized, open, multi-vendor interface for automation engineering.

The SNMP OPC server supports access to device information over the OPC interface. This means that network visualization, system diagnostics and plant status monitoring can be implemented in any OPC client systems (with OPC clients such as WinCC, WinCC flexible, PCS 7). In addition to simple device diagnostics, detailed information such as redundant network structures or network load distribution can be displayed. This increases the operational safety and improves the availability of the plant.

The device information can be visualized according to individual requirements and can be adapted to the special requirements of the respective customer installation. The information that is made available can also be integrated into the signaling system and alarm log of an HMI/SCADA system for example.

Using the SNMP information, it is possible to expand an existing HMI/SCADA system as far as a customer-specific network management station.

The SNMP OPC server can be operated over the following interfaces:

- CP 1613 A2 (PCI)
- CP 1623 (PCIe)
- CP 1628 (PCIe) [1]
- Integral Industrial Ethernet interface of SIMATIC programming devices/PCs or CP 1612 A2

[1] Available soon

PROFINET/Industrial Ethernet
Communication for PC-based systems

SNMP OPC server

■ Function

The SNMP OPC server supports access to SNMP-capable devices in the OPC client systems. For all configured TCP/IP devices that are not SNMP-capable, one OPC variable for -of-life monitoring (ICMP-PING) is offered.

Read access and in part write access to the respective device information is possible. Thus the diagnosis of individual devices is possible as well as diagnosis of the complete plant and device characteristics can be actively controlled.

STEP 7/NCM PC contains an MIB compiler (Management Information Base) for integrating SNMP-enabled devices. This allows device profiles to be created on the basis of an MIB file

Devices with SNMP agents

SIMATIC NET devices that feature special SNMP agents such as switches, WLAN Access Points and Industrial Ethernet PC and S7 communication processors are already included complete with their device profiles.

Thanks to MIB compilers (Management Information Base), other SNMP-enabled devices can be integrated into the OPC configuration through loading of MIBs in accordance with the SMI V1 and SMI V2 standard from STEP 7 V5.4.

Devices with IP addresses without SNMP agents

Devices without SNMP agents can be monitored using the ping mechanism. The user can edit and save device-specific information such as the contact person, site and device description for this purpose.

- Any SNMP-capable devices such as printers or PCs can be depicted using a predefined library.
- The devices are integrated into the desktop of a client application using preconfigured ActiveX Controls.

The predefined device profiles and the associated ActiveX controls allow easy administration of the devices in OPC client applications. Individual expansions can also be implemented.

The SNMP OPC server is integrated in the SIMATIC NET OPC server. The OPC Scout is also included in the functional scope for browsing the displayed SNMP information. The SNMP OPC server can use, for example, PROFINET or S7 communication at the same time as PROFIBUS and Industrial Ethernet communication. This means that existing installations can also be expanded with SNMP functionality. The SNMP OPC server also enables several clients to execute simultaneously on one server.

User interfaces

- "Custom Interface" for high-performance C++ applications
- "Automation Interface" for easily created Visual Basic applications (or similar).
- OPC Data Control for easy creation of client applications by configuring ActiveX controls
- OPC Alarms & Events (Subset)
- Preconfigured ActiveX controls for the device profile used

Configuration

The NCM PC configuration tool is included in the scope of supply of the CP 1612 A2/CP 1613/1623/1628 [1] software packages and SOFTNET for Industrial Ethernet.

■ **Overview**

PC with SOFTNET PN IO Linux as PROFINET IO Controller

- Software with PROFINET IO Controller function for coupling PCs and IPCs with PROFINET IO Devices
- Possible applications:
  - PC-based control systems
  - HMI systems
  - Test applications

- Communication services:
  - PROFINET IO Controller
- Can be used in combination with integrated Ethernet interface
- Cost-effective solution for the low-end performance range

■ **Benefits**

get Designed for Industry

- Cost-effective interfacing of field devices to Industrial Ethernet with PROFINET
- High-performance access to IO data through IO-Base interface for integration into C/C++ applications
- Simple changeover from CP 5613 A2/CP 5614 A2 PROFIBUS modules with DP-Base interface to PROFINET through IO-Base interface
- Uniform approach and configuration functionality with NCM PC and STEP 7

PROFINET/Industrial Ethernet
Communication for PC-based systems

SOFTNET PN IO Linux

2

■ **Application**

Using SOFTNET PN IO Linux, PCs can be linked with PN field devices including PC-based PN IO Devices (e.g. with CP 1616 or CP 1604) via Industrial Ethernet.

SOFTNET PN IO Linux is available for the following interfaces:

• Integrated Ethernet interfaces

■ **Function**

PROFINET communication

PROFINET IO controller

Connection of field devices to Industrial Ethernet with PROFINET

User interfaces

Programming interface via C Library

For the integration of the PROFINET IO controller functionality, the IO-Base interface can be used. In terms of design, this interface is based on the DP base interface of the PROFIBUS modules CP 5613 A2 and CP 5614 A2. Therefore, the porting of existing PROFIBUS DP master applications to PN IO Controller applications is also possible and easy.

SOFTNET PN IO Linux and CP 1616 use compatible functions of the IO Base interface.

Mode of operation

For SOFTNET, the entire protocol stack is handled in the PC. This architecture means that the performance depends on the configuration of the PC used or the loading on the PC.

Configuration

The configuration is done in STEP 7/NCM PC as of V5.3 SP1

■ **Technical specifications**

Product type designation	SOFTNET PN IO Linux
Performance data	
• Number of operable IO Devices	max. 64
• Number of external IO lines in one central rack	max. 1
• Size of IO data areas overall	
- I/O input range	Max. 2 KB
- I/O output range	Max. 2 KB
• Size of I/O data area per connected IO Device	
- I/O input range	Max. 1433 bytes
- I/O output range	Max. 1433 bytes

■ Overview

- Software for connecting SIMATIC S7
- Provision of S7 communication via SAPI-S7 interface
- Support of ISO and TCP/IP (RFC 1006) protocol
- Available on Linux operating systems
- Simultaneous operation of several cards

SOFTNET-S7/Linux system configuration

■ Benefits

- High-speed communication with the S7 based on the S7 protocol
- Cost-saving programming thanks to user-friendly and simple interface
- Flexible in use thanks to hardware-independent software

■ Application

For Linux systems, Siemens offers high-speed communication with the SIMATIC S7 for Industrial Ethernet based on the S7 protocol.

SAPI-S7 (Simple Application Programmer Interface) provides you with a user-friendly call interface for communication between HMI systems or other Linux applications and the SIMATIC S7.

■ Function

SOFTNET uses internal standard interfaces of the operating system for accessing the Ethernet connections. This supports the interface cards enabled by the operating system. Simultaneous operation of several cards is possible.

During communication, you can choose between the protocols ISO and TCP/IP with RFC1006 for each connection.

The SOFTNET products offer the user diagnostics and trace functions.

SOFTNET-S7/Linux functions

SIMATIC S7 system components communicate with each other using S7 communication functions. The programming interface SAPI-S7 (Simple Application Programmer Interface) is available for Linux operating systems as well as for the Windows operating systems.

S7 communication offers the following services:

- Administrative services
- Variable services
- BSEND/BRECV

SOFTNET-S7/Linux system configuration

Overview

- Integrated communication
- Cross-computer communication

- Uniform interface
  - To databases
  - Link to ERP and DB systems
  - To SIMATIC S7

System configuration for SOFTBUS-SOFTNET

Benefits

get Designed for Industry

- Communication across the system with standardized interface.
- Incorporation of ERP and DB systems.
- Interfacing of SIMATIC control systems
- Fast and automatic data flow

Application

The process landscape in industrial companies is frequently a product of historical developments. Thus there are many isolated solutions that function optimally within their own terms of reference but operate in a vacuum.

Integrating these requires a smooth, loss-free and integrated communication system. Only this guarantees that the right information arrives at the right place and at the right time.

SOFTBUS together with SOFTNET-S7 consists of matched modules that are available on the commonly used system platforms (Linux, Windows) and thus ensure smooth communication between the system platforms.

PROFINET/Industrial Ethernet
Communication for PC-based systems

SOFTBUS for Linux

2

■ Function

SOFTBUS functions

SOFTBUS comprises software modules that can be used on all commonly available computer systems (Windows, Linux).

The modules are compatible and have been adapted to standards such as SIMATIC NET and thus secure vertical integration with short start-up times.

SOFTBUS DB functions

SOFTBUS-DB merges databases and communication and therefore offers possibilities for transaction protection and uniform data storage.

Interfaces

Thanks to the combination of different modules, all commonly used platforms can be supported and linked together heterogeneously or homogeneously.

The programming interface of SOFTBUS is identical to the WVS-KOM interface of the SIPAX package.

This means that SIPAX applications can migrate to SOFTBUS without any problems.

■ **Overview**

SIMATIC Basic Panel, Touch Panels (TP), Operator Panels (OP), Mobile Panel, Multifunctional Platforms (MP) [1] and the SIMATIC HMI software package for PC WinCC flexible Runtime support HMI functionality in conjunction with:

- SIMATIC S7
- SIMATIC S5
- SIMATIC 505
- SIMOTION
- SINUMERIK [2]
- Non-Siemens controllers:
  - Allen Bradley – DF1, DH485 and Ethernet IP protocols
  - GE Fanuc – SNP/SNPX protocol
  - LG GLOFA GM – dedicated protocol
  - Mitsubishi – FX and MP 4 protocols
  - Modicon – Modbus RTU and TCP/IP protocols
  - Omron I – Link/MultiLink protocol
  - Telemecanique – UNI-TELWAY protocol

For more detailed information, refer to the WinCC flexible user manual, the "Windows-based systems communication" manual, and the WinCC flexible online help.

[1] For the sake of simplicity, SIMATIC TP/OP/MP is always used in the text below. This is not restrictive, as the information is valid for all systems referred to above. If there are constraints, direct reference is made to them in the text.

[2] Required under WinCC flexible: "SINUMERIK HMI copy license WinCC flexible CE" and "SINUMERIK HMI copy license OA". For configuring, a "SINUMERIK HMI engineering package WinCC flexible" is also necessary.

Note:

Interface options for HMI devices: See the individual device descriptions.

Extended functionality with WinCC flexible

WinCC flexible supports OPC communication for Multi Panel and WinCC flexible Runtime and HTTP communication for all panels with integrated Ethernet interface. Both OPC and HTTP communication can be used in parallel with the process links to SIMATIC S7/S5/505 or non-Siemens PLCs.

OPC Data Access
(MP 277, MP 377, WinCC flexible Runtime only)

OPC Data Access is an open standard for exchanging both local and remote variables between various applications via Industrial Ethernet. The original version of OPC is based on Microsoft COM/DCOM and, therefore, requires a Microsoft Windows-based PC operating system (not Windows CE) on both clients and servers. As OPC XML, communication is based on the Internet standard SOAP/XML and is, therefore, suitable for embedded systems with Windows CE.
Options that are required: WinCC flexible /OPC server

HTTP communication for the variable exchange
between SIMATIC HMI systems
(only TP 177B DP/PN, OP 177B DP/PN, Mobile Panel 177 PN, TP 277, OP 277, Mobile Panel 277, Mobile Panel 277 IWLAN, MP 277, MP 377, WinCC flexible Runtime)

Communication based on HTTP message frames enables variables to be exchanged between SIMATIC HMI systems.
Options that are required: WinCC flexible/Sm@rt Access

Communication standard	SIMATIC HMI

Overview

The following types of interface are supported in respect of the link between SIMATIC HMI Panels and SIMATIC WinCC flexible Runtime with SIMATIC S7:

- PPI interface:
  Interface between SIMATIC HMI Panels and SIMATIC S7-200 via PPI. Communication runs on the PPI protocol, a standard FB as with SIMATIC S5 is not required.

- MPI interface:
  Interface between SIMATIC HMI Panels and SIMATIC S7 via the integrated PPI interface with S7-200 or MPI interface with S7-300/-400 or alternatively via the MPI interface of a separate interface module and the backplane bus to the SIMATIC S7-CPU. Communication runs on the MPI protocol (PG/OP communication), a standard FB as with SIMATIC S5 is not required.

- PROFIBUS interface:
  Interface between SIMATIC HMI Panels and SIMATIC S7 via the integrated PROFIBUS interface on the CPU or alternatively via the PROFIBUS interface on a separate interface module and the backplane bus to the SIMATIC S7-CPU. Communication runs on the MPI protocol (PG/OP communication), a standard FB as with SIMATIC S5 is not required.

- PROFINET interface:
  Interface between SIMATIC HMI Panels and SIMATIC S7 via the integrated PROFINET interface on the CPU or alternatively via the Industrial Ethernet interface on a separate interface module and the backplane bus to the SIMATIC S7-CPU. Communication runs on the MPI protocol (PG/OP communication), a standard FB as with SIMATIC S5 is not required.

The maximum possible number of S7 connections of a CPU is determined by its power (see Catalog ST 70); from the point of view of SIMATIC HMI Panels the following restrictions apply:

- OP 73micro, TP 177micro: 1 connection
- OP 73: max. 2 connections
- OP 77A, TP 177A, Basic Panel, OP 77B, TP177B, OP 177B, Mobile Panel 177: max. 4 connections
- TP 277, OP 277; Mobile Panel 277, MP 177, MP 277, MP 377: max. 6 connections
- PC with WinCC flexible Runtime: max. 8 connections

PPI interface

From the point of view of the concept, the PPI interface is a point-to-point connection between a SIMATIC HMI Panel (PPI master) or alternatively a PG (PPI master), and an S7-200 (PPI slave).

MPI interface/PROFIBUS interface/
Industrial Ethernet interface

The multipoint-enabled communication interfaces of SIMATIC HMI Panels and SIMATIC S7 are used. Options are:

- Interface between one or a number of SIMATIC HMI Panels (MPI master) and one or a number of S7-1200/300/400s or WinAC (MPI master).
  (possible network topology: *MPI/PROFIBUS/Industrial Ethernet*)
- Interface between one or a number of SIMATIC HMI Panels (MPI master) and one or a number of S7-200s (MPI slave) [1]
  (possible network topology: *PPI/MPI/PROFIBUS*)

Unlike PPI connections, MPI connections are static connections that are set up during booting and then monitored.

The original format of a master/master link has in the meantime been joined by a master/slave link, which has enabled integration of the S7-200 (except CPU 212). [1]

In principle this type of information exchange between SIMATIC HMI Panels and SIMATIC S7 is independent of the network used, PPI, MPI, PROFIBUS or Industrial Ethernet: SIMATIC HMI Panels are S7 clients and SIMATIC S7 CPUs are S7 servers.

[1] Constraints with regard to baud rate for S7-200; see Catalog ST 70.

SIMATIC WinCC flexible RT

Overview

PC-based visualization software for single-user systems directly at the machine.

- Runs under Windows XP Professional and Windows 7 Professional, Ultimate, Enterprise
- Current version: SIMATIC WinCC flexible 2008 Runtime with Service Pack 2

SIMATIC WinCC flexible Runtime is configured with the SIMATIC WinCC flexible Advanced configuration software.

Benefits

- Optimum price/performance ratio thanks to individually scalable system functionality
- Functions for all visualization tasks:
  Operator functions, graphical and trend displays, signaling system, log system, archiving (option), recipe management (option), Audit Trail (option), process fault diagnostics (option)
- Flexible runtime functionality thanks to Visual Basic scripts
- Innovative service concepts with remote operation, diagnostics and administration via intranet and Internet as well as e-mail communication to increase availability (option)
- Support for simple distributed automation solutions based on TCP/IP networks at the machine level (option)

Integration

SIMATIC WinCC flexible Runtime supports linking to:

Protocol	PC interfaces
SIMATIC S7 via Ethernet (TCP/IP)	
S7-200 with CP 243-1	CP 1612 [1]
S7-300 CPUs with integral Ethernet interface	CP 1613 A2 CP 1623
S7-300 with CP 343-1	
S7-400 CPUs with integral Ethernet interface	
S7-400 with CP 443-1	
WinAC Basis (V3.0 and higher)	
WinAC RTX	
SIMATIC S7 via integrated interface	
WinAC Basis (V2.0 and higher)	Internal system interface
WinAC RTX	
SIMOTION [2]	
SINUMERIK [3]	
Third-party controllers	
Allen Bradley (DF1/DH485)	COM1/COM2
Allen Bradley (Ethernet)	CP 1612 [1]
GE Fanuc (SNP/SNPX)	COM1/COM2
LG GLOFA GM	COM1/COM2
Mitsubishi (FX/MP4)	COM1/COM2
Modicon (Modbus)	COM1/COM2
Modicon (Modbus TCP/IP)	CP 1612 [1]
OMRON (Link/Multilink)	COM1/COM2
OPC [4] [6]	
Data Access V2.05a (client + server)	CP 1612 [1]
Data Access XML V1.00 (client)	
HTTP communication for data exchange between SIMATIC HMI (client + server) [5] [6]	CP 1612 [1]

[1] For Microbox 427 and Panel PC 477/577/677/877 via internal Ethernet interface

[2] For further information, see Catalog PM 10

[3] "SINUMERIK HMI copy license OA" option required; for further information, see Catalog NC 60

[4] OPC Client is included in scope of delivery, the "WinCC flexible /OPC Server for WinCC flexible Runtime" license is required for the OPC Server option

[5] "WinCC flexible /Sm@rtAccess for WinCC flexible Runtime" license required

[6] OPC and HTTP communication are additive, i.e. can be used in conjunction with the PLC links listed above

For information about SIMATIC Panels that support OPC/http communication, see the overview under "System interfaces".

Application note

In parallel with each and every PLC link, WinCC flexible Runtime supports the use of the OPC Client channel; this enables, for example, connection to an SNMP OPC Server for the purpose of visualizing the data stored there. The SNMP OPC Server provides a means of monitoring network components of any type (e.g. switches) which support the SNMP protocol.

Note:

You can find more information in Catalog ST 80 / ST PC and in the Industry Mall at www.siemens.com/industrymall

www.siemens.com/wincc-flexible

PROFINET/Industrial Ethernet
System interfaces for SIMATIC HMI

SIMATIC WinCC

■ Overview

- PC-based operator control and monitoring system for visualizing and operating processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems with redundant servers and cross-location solutions with Web clients. WinCC is the information hub for corporation-wide vertical integration.

- The basic system configuration (WinCC basic software) includes industry-standard functions for signaling and acknowledging events, archiving of messages and measured values, logging of all process and configuration data, user administration and visualization.

- The WinCC basic software forms the core of a wide range of different applications. Based on the open programming interfaces, a wide range of WinCC options (from Siemens Industry Automation) and WinCC add-ons have been developed (by Siemens-internal and external partners).

- WinCC can be operated with every PC that meets the given HW requirements. Particularly the SIMATIC Panel PC and SIMATIC Rack PC product range is available for the industrial use of WinCC systems. SIMATIC PCs impress with their powerful PC technology, are designed for round-the-clock operation, and can be operated in both office areas and harsh industrial environments.

- Together with the Panel PC 477B, there are turnkey solutions as WinCC Standard Client and with the SIMATIC HMI IPC477C as WinCC Standard Client or Single Station.
  (See also Packages and HMI IPC477C)

Current versions:

- **SIMATIC WinCC V7.0 SP2:**
  Executable with
  - Windows 7 (32-bit) Professional, Enterprise, Ultimate
  - Windows XP Professional SP3
  - Windows 2003 Server SP2 and Windows 2003 Server R2 SP2
  - Windows 2008 Server SP2 (32-bit)
    contains the Microsoft SQL Server 2005 SP2
  - Use in virtual environments – for further information, see http://support.automation.siemens.com/WW/view/en/49370459

- **SIMATIC WinCC V6.2 SP3:**
  Executable with
  - Windows XP Professional
  - Windows 2000 Professional
  - Windows Server 2003 and Windows Server 2003 R2
    Contains the Microsoft SQL Server 2005 SP2

■ Integration

Integration in company-wide solutions (IT and business integration)

WinCC is strictly based on Microsoft technology, which provides for the greatest possible compatibility and integration ability. ActiveX and .net [1] controls support technology and sector-specific expansions. Cross-manufacturer communication is also a simply exercise. The reason: WinCC can be used as an OPC client and server, and in addition to access to current process values, it also supports standards such as OPC HDA (Historical Data Access), OPC Alarm & Events, and OPC XML Data Access. Just as important: Visual Basic for Applications (VBA) for user-specific expansions of the WinCC Graphics Designer and Visual Basic Scripting (VBS) as an easy-to-learn, open runtime language. If desired, professional application developers can also use ANSI-C. And the access to the API programming interfaces is really simple with the Open-Development-Kit ODK.

WinCC integrates a powerful and scalable Historian function based on the Microsoft SQL Server 2005 in the basic system. Thus the user is given all possibilities: from high-performance archiving of current process data, to long-term archiving with high data compression, through to a central information turntable in form of a company-wide Process Historian. With the help of the option Central Archive Server, this can be created within the framework of a WinCC solution. Versatile clients and tools for evaluation, the open interfaces, special options (Connectivity Pack, Connectivity Station, IndustrialDataBridge) provide the basis for an effective IT and business integration.

[1] Only supported by WinCC V7.0

Integration in automation solutions

WinCC is an open process visualization system and offers the option of connecting the most diverse control systems.

Released communication software

Only communication software with the listed (or higher) product versions should be used. Corresponding SIMATIC NET upgrades are available for the upgrading of older versions.

Number of connectable controls

For the number of the connectable controls via Industrial Ethernet CP 1613/CP 1623, the following applies for a message frame length of 512 bytes:

Type of coupling	Number of nodes
SIMATIC S5 Ethernet Layer 4 + TCP/IP	up to 60
SIMATIC S7 Protocol Suite	up to 64
SIMATIC 505 Ethernet Layer 4 + TCP/IP	up to 60

Via PROFIBUS, a maximum of 8 controls with CP 5611 and a maximum of 44 controls with CP 5613 can be connected. With approx. 10 or more controls, the usage of Industrial Ethernet is recommended.

2

■ **Integration** (continued)

Mixed mode with different controls

With their multi-protocol stack, the communication processors CP 1613/CP 1623 and CP 5613 allow for the parallel operation of two protocols, e.g. for the mixed operation of different controls via a bus cable. WinCC supports the operation of two similar interface boards only in connection with the channels SIMATIC S5 Ethernet Layer 4 (2 x CP 1613/CP 1623), SIMATIC S7 Protocol Suite (2 x CP 1613/CP 1623, 2 x CP 5613) as well as PROFIBUS DP (4 x CP 5613; each CP 5613 max. 122 slaves). In addition to communication over industrial Ethernet CP 1613 or PROFIBUS CP 5613, one CP 5611 for communication with SIMATIC S7 via MPI can be used in each case.

Client-server communication

The communication between the clients and the server is achieved using the TCP/IP protocol. The construction of a separate PC-LAN is recommended. For small projects with correspondingly small message frame advent, a SIMATIC NET Industrial Ethernet can be used for both process communication (WinCC/Server ↔ PLC) and for the PC-PC communication (WinCC/client ↔ WinCC/server)

Channel-DLL PROFIBUS DP

In accordance with the PROFIBUS standard, DP/slaves are always permanently assigned to a DP master; i.e. a second WinCC station (DP/master) cannot access the same controls (DP/slave) This means that a redundant operation of two WinCC stations is not possible with the use of the PROFIBUS DP coupling.

Connection to controls from other manufacturers:

For the connection of controls from other manufacturers, OPC (OLE for Process Control) is recommended.

Current notes and information about OPC servers from various suppliers can be found at:
www.opcfoundation.org

WinCC supports the standards:

- OPC Data Access 2.05a
- OPC Data Access 3.00
- OPC XML Data Access 1.00 (Connectivity Pack/Connectivity Station)
- OPC HDA 1.20 (Connectivity Pack/Connectivity Station)
- OPC A&E 1.10 (Connectivity Pack/Connectivity Station)

Coupling overview

Protocol	Description
SIMATIC S7	
SIMATIC S7 Protocol Suite	Channel DLL for S7 functions via MPI, PROFIBUS or Ethernet Layer 4 + TCP/IP
Non-Siemens controllers (from WinCC V7.0)	
Allen Bradley - Ethernet IP	Channel DLL and drivers for communication with Allen Bradley controllers via Ethernet TCP/IP with Ethernet IP protocol
Modbus TCP/IP	Channel DLL and drivers for communication with Modicon controllers via Ethernet TCP/IP using Modbus TCP/IP protocol
Mitsubishi MC TCP/IP	Channel DLL and drivers for communication with Mitsubishi controllers via Ethernet TCP/IP using Mitsubishi MC TCP/IP protocol
Cross-manufacturer	
OPC client [1] for DA, XML DA	Channel DLL for OPC communication, WinCC can acquire data from OPC server applications.
OPC server for DA, XML DA, A&E, HDA	Server applications for OPC communication; WinCC provides process data for OPC client
PROFIBUS FMS	Channel DLL for PROFIBUS FMS
PROFIBUS DP	Channel DLL for PROFIBUS DP

[1] Application note:
The parallel usage of the OPC client channel allows, for example, the connection to an SNMP-OPC server for visualization of the data contained there. The SNMP-OPC server enables monitoring of any network components (e.g. switch) that support the protocol SNMP. You can find more information under SIMATIC NET Communications Systems/SNMP OPC Server.

■ Overview

The SIMATIC Touch Panel (TP), Operator Panel (OP), Basic Panel, Comfort Panel, Mobile Panel, multifunctional platforms (MP) [1] offer HMI functionality for the control systems:

- SIMATIC S7
- SINUMERIK [2]
- Non-Siemens controllers:
  - Allen Bradley
  - Mitsubishi
  - Modicon
  - Omron

For more detailed information, refer to the WinCC flexible user manual, the "Windows-based systems communication" manual, and the WinCC flexible online help.

[1] For the sake of simplicity, SIMATIC Panel is always used in the text below. This is not restrictive, as the information is valid for all systems referred to above. If there are constraints, direct reference is made to them in the text.

[2] Required under WinCC flexible: "SINUMERIK HMI copy license WinCC flexible CE" and "SINUMERIK HMI copy license OA". For configuring, a "SINUMERIK HMI engineering package WinCC flexible" is also necessary.

OPC communication and HTTP communication are offered for all Panels with an integrated Ethernet interface. Both OPC and HTTP communication can be used in parallel with the process links to SIMATIC S7 or non-Siemens PLCs.

OPC communication

OPC Data Access is an open standard for exchanging both local and remote variables between various applications via Industrial Ethernet. The original version of OPC is based on Microsoft COM/DCOM and, therefore, requires a Microsoft Windows-based PC operating system (not Windows CE) on both clients and servers. As OPC XML, communication is based on the Internet standard SOAP/XML and is, therefore, suitable for embedded systems with Windows CE.

HTTP communication for variable exchange between SIMATIC HMI systems

Communication based on HTTP message frames enables variables to be exchanged between SIMATIC HMI systems.

SIMATIC S7

2

■ Overview

The following types of interface are differentiated in respect of the link between the SIMATIC Panels and SIMATIC S7 controllers:

- PROFINET interface:
  Coupling of SIMATIC Panel to SIMATIC S7 controllers via Industrial Ethernet TCP/IP using the integrated PROFINET interface of the CPU or, alternatively, a PROFINET interface module.

- MPI/PROFIBUS interface:
  Coupling of SIMATIC Panel to SIMATIC S7 controllers via MPI/PROFIBUS using the integrated MPI/PROFIBUS interface of the CPU for S7-300, S7-400 or the integrated PPI interface of the CPU in the case of S7-200 or, alternatively, a PROFIBUS interface module in the case of S7-1200, S7-300 and S7-400.

- PPI interface:
  Coupling of SIMATIC Panel to SIMATIC S7-200 via PPI network using the integrated PPI interface of the CPU

The maximum possible number of S7 connections of one CPU is determined by its performance capacity (see Catalog ST 70); from the point of view of SIMATIC Panel, the following restrictions apply:

- OP 73: max. 2 connections
- OP 77A, TP 177A, Basic Panel, OP 77B, TP177B, OP 177B, Mobile Panel 177: max. 4 connections
- Comfort Panel, TP 277, OP 277; Mobile Panel 277, MP 177, MP 277, MP 377: max. 6 connections
- PC with PC WinCC Runtime Advanced: max. 8 connections

PPI interface

The PPI interface is a point-to-point connection between a SIMATIC Panel (PPI master) or alternatively a PG (PPI master) and an S7-200 (PPI slave).

MPI/PROFIBUS interface or PROFINET interface

The corresponding multipoint-enabled communication interfaces of SIMATIC Panels and SIMATIC S7 are used. The following are possible:

- Interface between one or a number of SIMATIC Panels (MPI master) and one or a number of S7-1200/300/400s or WinAC (MPI master).(possible network topology: MPI/PROFIBUS or Industrial Ethernet, TCP/IP)
- Interface between one or a number of SIMATIC Panels (MPI master) and one or a number of S7-200s (MPI slave) [1] (possible network topology: PPI, MPI/PROFIBUS)

Unlike PPI connections, MPI connections are static connections that are set up during booting and then monitored.

The original format of a master/master link has been joined by a master/slave link, which has enabled integration of the S7-200 (except CPU 212). [1]

In principle this type of information exchange between SIMATIC Panels and SIMATIC S7 is independent of the network used, PPI, MPI/PROFIBUS or Industrial Ethernet: SIMATIC Panels are S7 clients and SIMATIC S7 CPUs are S7 servers.

[1] Constraints with regard to baud rate for S7-200; see Catalog ST 70.

SIMATIC WinCC (TIA Portal) Runtime

■ **Overview**

SIMATIC WinCC Runtime Advanced visualization software

- PC-based HMI solution for single-user systems directly at the machine
- Basic package for visualization, reporting and logging, user administration, can be expanded flexibly with VB scripts
- Basic package expandable by means of option packages
- Can be integrated into automation solutions based on TCP/IP networks
- Expanded service concepts with remote operation, diagnostics and administration over the intranet and Internet in combination with email communication

SIMATIC WinCC Runtime Professional visualization software

- PC-based operator control and monitoring system for visualization and operator control of processes, production flows, machines and plants in all sectors – from the simple single-user station through to distributed multi-user systems and cross-location solutions with web clients. WinCC Runtime Professional is the information hub for corporation-wide vertical integration.
- Industry-standard functions for signaling and acknowledging events, archiving of messages and measured values, logging of all process and configuration data, user administration, can be expanded flexibly with VB and C scripts
- Basic package expandable by means of option packages
- Also included are APIs for the Runtime to utilize the open programming interfaces

Note:
You can find more information in Catalog ST 80/ST PC and in the Industry Mall at www.siemens.com/industrymall

PROFINET/Industrial Ethernet
System interfaces for SIMATIC HMI

WinCC Runtime Communication

2

■ Overview

SIMATIC WinCC Runtime Advanced

WinCC Advanced is an open visualization system and offers the option of connecting the most diverse control systems.

Number of connectable controllers

WinCC Advanced permits the parallel coupling of up to 8 controllers.

Connection to third-party controllers

The following "Coupling overview" table lists third-party protocols and controllers which are directly supported by WinCC Advanced. Generally it is also possible to connect third-party controllers via OPC (OLE for Process Control).

Current notes and information about OPC servers from many different suppliers can be found at:
www.opcfoundation.org/

WinCC Advanced supports the standards:

- OPC Data Access 2.05a
- OPC XML Data Access 1.00 (client via DCOM/XML gateway)

Coupling overview for WinCC Runtime Advanced

Protocol	Description	PC interface
SIMATIC HMI		
Ethernet TCP/IP (HTTP communication)	HTTP communication for data exchange between SIMATIC HMI (client + server) [1]	CP 1612 A2
SIMATIC S7		
Ethernet TCP/IP (S7 communication)	Channel for communication via Ethernet TCP/IP with max. 8 x SIMATIC S7 controllers S7-1200, S7-300, S7-400, S7-200 with CP 243-1	CP 1612 A2 CP 1613 A2 CP 1623
SINUMERIK [2]		
Ethernet TCP/IP (S7 communication)	Channel for communication via Ethernet TCP/IP with SINUMERIK 840D sl	CP 1612 A2 CP 1613 A2 CP 1623
Third-party controllers (from WinCC V11.0) [3]		
Allen Bradley Ethernet IP	Channel for communication with max. 4 x Allen Bradley controllers via Ethernet TCP/IP with Allen Bradley Ethernet IP protocol The controllers ControlLogix / CompactLogix, SLC500 / MicroLogix and PLC5 are supported	CP 1612 A2
Mitsubishi MC TCP/IP	Channel for communication with max. 4 x Mitsubishi controllers via Ethernet TCP/IP with Mitsubishi MC TCP/IP protocol The FX3, Q, and iQ/QnUD controller series are supported	CP 1612 A2
Modbus TCP/IP	Channel for communication with max. 4 x Modicon controllers via Ethernet TCP/IP using the Modbus TCP/IP protocol The Quantum, Momentum, Premium, TSX Micro, Compact and M340 controllers are supported	CP 1612 A2
Cross-manufacturer		
OPC client [1] [4] for DA, XML DA	Channel for OPC communication, WinCC can acquire data from OPC server applications	CP 1612 A2
OPC server for DA	Server applications for OPC communication; WinCC provides process data to OPC clients	CP 1612 A2

[1] HTTP and OPC communication can be used in combination with the other couplings; regarding SIMATIC Panels that support HTTP or OPC communication, see the overview under "System interfaces (WinCC V11)".

[2] "SINUMERIK Operate WinCC RT Advanced" license required; for further information, see NC 60 Catalog.

[3] For detailed information regarding supported controllers, see "System interfaces (WinCC V11)"

[4] Application note:
The parallel use of the OPC client channel allows, for example, the connection to an SNMP OPC Server for visualization of the data present there. The SNMP OPC Server enables monitoring of any network components (e.g. switch) that support the SNMP protocol. Further information can be found under SIMATIC NET communications systems/SNMP OPC Server.

2

WinCC Runtime Communication

■ Overview (continued)

SIMATIC WinCC Runtime Professional

WinCC Professional is an open process visualization system and offers the option of connecting the most diverse control systems.

Released communication software

Only communication software with the listed (or higher) product versions should be used. Corresponding SIMATIC NET upgrades are available for the upgrading of older versions.

Number of connectable controllers

With CP 1613/CP 1623, a maximum of 64 S7 controllers can be connected via Industrial Ethernet; with CP 5611 a maximum of 8 and with CP 5613 a maximum of 44 S7 controllers can be connected via PROFIBUS. With approx. 10 or more controllers, the use of Industrial Ethernet is recommended.

Client-server communication

Communication between the clients and the server is implemented using the TCP/IP protocol. The construction of a separate PC-LAN is recommended. For small projects with correspondingly small message frame advent, a SIMATIC NET Industrial Ethernet can be used for both process communication (WinCC/server ↔ PLC) and for PC-PC communication (WinCC/client ↔ WinCC/server)

Connection to third-party controllers

The following "Coupling overview" table lists third-party protocols and controllers which are directly supported by WinCC Professional. Generally it is also possible to connect third-party controllers via OPC (OLE for Process Control).

Current notes and information about OPC servers from many different suppliers can be found at:
www.opcfoundation.org/

WinCC Professional supports the standards:
- OPC Data Access 2.05a
- OPC Data Access 3.00
- OPC XML Data Access 1.00 (Connectivity Pack/Connectivity Station)
- OPC HDA 1.20 (Connectivity Pack/Connectivity Station)
- OPC A&E 1.10 (Connectivity Pack/Connectivity Station)

Coupling overview for WinCC Runtime Professional

Protocol	Description	PC interface
SIMATIC S7		
SIMATIC S7 Protocol Suite	Protocol Suite with channel units for communication with SIMATIC S7 via • Ethernet TCP/IP (S7 communication) to S7-1200, S7-300, S7-400 • Software interface (S7 communication) to WinAC	CP 1612 A2 CP 1613 A2 CP 1623
Third-party controllers (from WinCC V11.0)		
Allen Bradley Ethernet IP	Channel for communication with Allen Bradley controllers via Ethernet TCP/IP with Ethernet IP protocol The controllers ControlLogix / CompactLogix, SLC500 / MicroLogix, and PLC5 are supported	CP 1612 A2
Mitsubishi MC TCP/IP	Channel for communication with Mitsubishi controllers via Ethernet TCP/IP with Mitsubishi MC TCP/IP protocol The FX3, Q, and iQ/QnUD controller series are supported	CP 1612 A2
Modbus TCP/IP	Channel for communication with Modicon controllers via Ethernet TCP/IP using the Modbus TCP/IP protocol The Quantum, Momentum, Premium, TSX Micro, Compact and M340 controllers are supported	CP 1612 A2
Cross-manufacturer		
OPC client [1] **for DA, XML DA**	Channel for OPC communication, WinCC can acquire data from OPC server applications	CP 1612 A2
OPC Server for DA, XML DA, A&E, HDA	Server applications for OPC communication; WinCC provides process data to OPC clients	CP 1612 A2

[1] Application note:
The parallel use of the OPC client channel allows, for example, the connection to an SNMP OPC Server for visualization of the data present there. The SNMP OPC Server enables monitoring of any network components (e.g. switch) that support the SNMP protocol. Further information can be found under SIMATIC NET communications systems/SNMP OPC Server.

2

■ Overview

- Swap media that supports the fast and easy replacement of SIMATIC NET components without a programming device in the event of a fault
- For implementation in all SIMATIC NET products with C-PLUG slot
- For automatic backing up of configuration or engineering data from the SIMATIC NET components
- The C-PLUG can also be used to store application data such as documents or Web pages
- In some SIMATIC S7 CP modules, such as the CP 443-1 Advanced, the C-PLUG is a standard component of the scope of supply and is required to guarantee the complete functional scope of the respective component.

■ Benefits

get Designed for Industry

- Quick and easy replacement of SIMATIC NET components without the need to reconfigure the replacement part
- The device can be replaced without the need for specially trained personnel or a programming device or PC
- The downtime of network segments and connected Industrial Ethernet stations in the event of a fault is minimized.

■ Application

The C-PLUG is used when it is necessary for network components or communication modules to be replaced quickly and easily in the event of a fault without the need for reconfiguring the replacement part and without the need for special training.

■ Design

The C-PLUG is designed to the degree of protection IP20. For IP65 components, the degree of protection is ensured by the construction of the target device. The power supply is also provided by the data terminal.

The C-PLUG is plugged into the appropriate slot in the SIMATIC NET component. During start-up of the device and reconfiguring, the configuration data of the device is backed up automatically.

In the event of component failure, the C-PLUG is simply removed from the failed component and plugged into the replacement part. The replacement unit installed in the network or in the automation system then starts up automatically with the same device configuration as the failed device.

To protect against inadvertent removal (falling out), the slot for the C-PLUG is usually mounted on the rear of the data terminal.

The C-PLUG is plugged into the rear of the CP 443-1 Advanced

The C-PLUG is plugged into the IWLAN Access Point SCALANCE W 788-1PRO on the rear of the device

2

C-PLUG

■ Function

During start-up, the device automatically backs up the configuration data on an unwritten C-PLUG (delivery condition) that has been plugged into a SIMATIC NET component. Changes to the configuration during normal operation are also backed up on the C-PLUG without any additional operator intervention.

During start-up an unconfigured device automatically loads the configuration data from an inserted, written C-PLUG provided the data were written by a compatible device type.

Diagnostics

Incorrect C-PLUG handling, such as inserting a C-PLUG that contains the configuration of another device group or general malfunctions of the C-PLUG are signaled over the diagnostic mechanisms for the respective data terminal (LEDs, PROFINET, SNMP, Web-based Management, etc.).

■ Integration

Supported products

SCALANCE X Industrial Ethernet switches

- SCALANCE X-200
- SCALANCE X-300 (included in scope of supply)
- SCALANCE X-400 (included in scope of supply)
- SCALANCE X-500 (included in scope of supply)

SCALANCE S security modules

- SCALANCE S-600

Industrial Wireless LAN SCALANCE W

- SCALANCE W74x IWLAN Client Modules
- SCALANCE W78x IWLAN Access Points

System connections for SIMATIC S7

- CP 443-1 Advanced (included in delivery)
- CP 343-1 Advanced (included in delivery)
- CP 343-1 ERPC (included in delivery)

Network transitions

- IWLAN/PB Link PN IO
- IE/PB Link PN IO
- IE/AS-i LINK PN IO
- DP/AS-i LINK Advanced

■ Technical specifications

Product type designation	C-PLUG
Power supply	via terminal equipment
Power dissipation	0.015 mW
Assembly	Can be plugged into C-PLUG slot
Permissible ambient conditions	
• Operating temperature	-40 °C to +85 °C
• Transport/storage temperature	-40 °C to +80 °C
• Relative humidity	max. 95%
Constructional design	
• Dimensions (W x H x D) in mm	24.3 x 17 x 8.1
• Weight	approx. 5 g
Memory capacity	32 MB
Degree of protection	IP20

■ Ordering data

	Order No.
C-PLUG	**6GK1 900-0AB00**
Swap medium for simple replacement of devices in the event of a fault; for storing configuration or engineering and application data; can be used for SIMATIC NET products with C-PLUG slot	

Overview

- The PS791-1 PRO power supply is an AC/DC power supply for input voltages of 90 to 265 V AC for numerous SCALANCE products with IP65 degree of protection.
- Mounting:
  - Wall mounting or on S7-300 rail, immediately under/next to the SCALANCE W788-xPRO and SCALANCE W788-xRR Access Points, SCALANCE W74x-1PRO and SCALANCE W74x-1RR Client Modules, or SCALANCE X-200PRO switches
- Robust metal housing with IP65 protection against water and dust
- Operating temperature -20 °C to +60 °C

Benefits

g e t
get   Designed for Industry

- Reduced storage of replacement parts, as only one power supply unit is required for several SCALANCE products with IP65 degree of protection
- Global application due to wide input voltage range
- High reliability as power supply is short-circuit proof, secure against no-load operation and is able to bridge short breaks in the mains power
- Variety of possible applications thanks to:
  - wide range of input voltages
  - high degree of efficiency
  - low heat dissipation

Design

- Fanless design and rugged metal casing; High protection against dust and splashwater with IP65 degree of protection
- Operating temperatures from -20 °C to +60 °C
- Resistant to condensation
- Connection to AC network via AC Power 3+PE cable connector (included)
- Direct mounting is possible on the SCALANCE products with IP65 degree of protection using supplied installation material; also suitable for wall-mounting or mounting on standard mounting rail (S7-300)

Example for the use of power supply PS791-1PRO with SCALANCE X and SCALANCE W

Note:
When SCALANCE W is connected to SCALANCE X208PRO, the power supply in the hybrid connector is not available; power must be supplied via the M12 plug connector.

Overview

- SICLOCK TC 400 and TC 100 central plant clock as the central component for time synchronization of a plant over Ethernet
- *SICLOCK TC 400*
  - Four independent Ethernet interfaces for supporting several Ethernet subnets
  - Redundancy options
  - Designed for PROFINET
- *SICLOCK TC 100*
  - An Ethernet interface
  - Designed for mini and small plants
  - Designed for PROFINET
- GPS or DCF77 radio clocks for direct connection to PCs, SIMATIC S7 controllers, and to the SICLOCK TC 400 or TC 100 central plant clocks
- Pulse converter for electrical and optical distribution and interface conversion
- Complete packages for common applications

Application

Time synchronization of all components plays an important part in the automation of production plants. The SICLOCK system is a parameterizable, modular system with perfectly matched components for the time synchronization of plants.
GPS (worldwide) as well as DCF77 (Germany) can be used for external radio synchronization

The modular SICLOCK system supports the time synchronization of an individual PLC through to the large plant with multiple redundancy.

Time synchronization concepts

The automation systems and operator stations of a SIMATIC PCS 7 plant or WinCC stations can be synchronized as follows with DCF77 or GPS time signals:

- Large plants:
  for larger plants with many network stations and stringent requirements for timekeeping, the time synchronization is performed using a SICLOCK TC 400 central plant clock on the plant bus.
- Small plants:
  For small to medium-sized plants, the PCS 7 Operator Station or the WinCC Station are used as the time master, connecting the corresponding DCF or GPS radio clock directly to the COM interface of the PC.
  An alternative to the PC solution is the option of synchronizing the plant over the NTP via the SICLOCK central plant clocks. The SICLOCK TC 100 is recommended for use with these small plants.
- Stand-alone systems:
  For SIMATIC S7 controllers or small systems, e.g. for laboratory automation, SICLOCK DCFS7 is a low-cost alternative to DCF77 synchronization directly over an S7 digital input.

Design

SICLOCK TC 400 and TC 100 are designed for mounting on a SIMATIC rail. Sets of materials for installation in 19-inch racks are also available.

PROFINET/Industrial Ethernet

Accessories

SICLOCK time synchronization

2

Function

Central plant clocks

The SICLOCK TC 400 and SICLOCK TC 100 central plant clocks support the synchronization of CPs and PCs with the SIMATIC procedure as well as the NTP procedure over Industrial Ethernet.

SICLOCK TC 400

SICLOCK TC 400 is used as a central plant clock for highly accurate timekeeping and distributes the time to all synchronized systems over Industrial Ethernet, as well as over three additional point-to-point connections with TTY/24 V and RS422/5 V.

The devices are equipped with four independent Ethernet interfaces. This enables separate or redundant automation networks and I&C networks to be synchronized in parallel with just one device. Apart from the well-proven standard networks such as SIMATIC NET or NTP, TC 400 is also prepared for use in PROFINET.

Interfaces, signal types, redundancy, etc. are parameterized over the Internet/HMI. The display of statuses on the device provides fast access to the operating status and any faults.

SICLOCK TC 400 has interrupt capability and can be integrated into the I&C.

SICLOCK TC 100

SICLOCK TC 100 is the "little sister" of the TC 400 and is used as a central plant clock for highly accurate time synchronization. It distributes the time to all systems to be synchronized over an Industrial Ethernet interface.

Like the TC 400, the interfaces, signal types, redundancy, etc. are parameterized over the Internet/HMI. The display of statuses on the device provides fast access to the operating status and any faults.

SICLOCK TC 100 has interrupt capability and can be integrated into the I&C.

On failure of the antennas of radio clocks, the central plant clocks *SICLOCK TC 400* and *SICLOCK TC 100* continue to provide reliable clock control thanks to automatic changeover to highly accurate quartz operation. When the radio clock is returned to service, they accept the time signal without a time step.

DCF radio clocks

**SICLOCK DCFRS,
radio clock, industrial version** — **2XV9 450-1AR21**

DCF radio clock for time synchronization of individual PCs or servers in industrial environments with high levels of interference;
distances of up to 1000 m are possible between the DCF radio clock and the PC,
package comprises

- Active DCF77 antenna with TTY output (20 mA line current) and antenna frame
- TTY/RS232 converter
- Plug-in power supply
- Two junction boxes
- 1 m connecting cable mounted, extendable to 1000 m
- DCF77 receiving service for Windows

**SICLOCK DCFRS,
radio clock for Windows** — **2XV9 450-1AR14**

DCF radio clock for the time synchronization of individual PCs over short distances,
package comprises

- Active DCF77 antennas with RS232 interface and mounting bracket
- 20 m connecting cable, mounted
- DCF77 receiving service for Windows

SICLOCK DCFS7 — **2XV9 450-1AR36**

Low-cost solution for time synchronization of SIMATIC S7-300/400 over DCF77 over one digital input,
package comprises

- SICLOCK DCFRS, radio clock with RS232 output, 20 m connecting cable and mounting bracket
- SICLOCK DCFS7 interface
- SICLOCK DCFS7 receiving service (STEP 7 function block for integration in S7 software)

Accessories for SICLOCK DCFS7

**SICLOCK DCFS7 interface +
receiving service** — **2XV9 450-1AR30**

(STEP 7 function block for integration in S7 software)

SICLOCK DCFS7 interface — **2XV9 450-1AR35**

**SICLOCK DCFS7
receiving service** — **2XV9 450-1AR32**

(STEP 7 function block for integration in S7 software)

GPS radio clocks

**GPS1000 + power supply,
radio clock for Windows** — **2XV9 450-1AR82**

GPS radio clock for time synchronization of PCs, programmable controllers as well as SICLOCK TC 400/TC 100 central plant clocks in industrial environments with high levels of interference with distances up to 1000 m between the antenna and device,
package comprises

- GPS1000 antenna head with antenna frame
- GPS1000 power supply
- Junction box
- 5 m RS232 connecting cable
- DCF77 receiving service for Windows

SIPLUS IM 151-3 PN interface module (extended temperature range and medial exposure)	
For ET 200S; transfer rates up to 100 Mbit/s; data volume depends on the number of modules inserted, up to 63 modules can be connected, bus connection through RJ45	6AG1 151-3AA23-2AB0
Accessories	See SIMATIC IM 151-3 PN interface module

PROFINET/Industrial Ethernet
SIMATIC ET 200S – Interface modules with integrated CPU

IM 151-8 PN/DP CPU

■ **Overview**

- Interface module for SIMATIC ET 200S with integrated CPU S7-314
- For high-performance control solutions in ET 200S

- Increase of the availability of systems and machines
- PROFINET IO Controller for up to 128 IO Devices
- PROFINET I-Device for connecting the CPU as an intelligent PROFINET device under a SIMATIC or non-Siemens PROFINET IO controller
- PROFINET interface with integrated 3-port switch
- Isochronous mode on PROFINET
- With many communication options: PG/OP communication, PROFINET IO, PROFINET CBA, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7-communication (with loadable FBs)
- Fast, simple and end-to-end programming of a system with modular programs via STEP 7
- Compact SIMATIC Micro Memory Card (MMC)
- Optional PROFIBUS master for 32 PROFIBUS DP slaves (with master interface 6ES7138-4HA00-0AB0)
- Fail-safe IM 151-8F PN/DP CPU PROFIsafe available

Note:

SIMATIC Micro Memory Card required for operation of CPU.

Overview

PROFIBUS DP master interface module for IM 151-7(F) CPU/
IM 151-8(F) PN/DP CPU interface modules

- Integrated 12 Mbit/s PROFIBUS DP master interface in copper design
- Facilitates parallel operation of two PROFIBUS DP interfaces on one IM 151-7 CPU
- Enables operation of a PROFIBUS DP interface on an IM 151-8(F) PN/DP CPU
- Increases the availability of plants and machinery
- Functionality corresponds to the interface of an S7-300 CPU 314-2 DP configured as DP master

Programming is with STEP 7 from Version V5.2 with
Service Pack 1.

Overview

PROFIBUS DP master interface module for interface module IM 151-7 (R) CPU / IM 151-8 (F) PN/DP CPU

- Integrated 12 Mbit/s PROFIBUS DP master interface in Cu version
- Allows parallel operation of two PROFIBUS DP interfaces on one IM 151-7 CPU
- Allows operation of one PROFIBUS DP interface with an IM 151-8 (F) PN/DP CPU
- Increase in availability of systems and machines
- Functionality in accordance with a DP master configured interface of an S7-314 CPU

Programming is performed with STEP 7 from version V5.2 with Service Pack 1.

Note:

IM 151-8 F PN/DP CPU

■ Overview

2

- Interface module for SIMATIC ET 200S with integrated fail-safe CPU
- For constructing a fail-safe automation system for plants with increased safety requirements
- Complies with safety requirements up to SIL 3 according to IEC 61508, IEC 62061, up to PLe according to ISO 13849-1:2006 and Cat. 4 according to EN 954-1
- For high-performance control solutions in ET 200S
- Increase of the availability of systems and machines
- PROFINET IO-Controller for up to 128 IO-Devices
- PROFINET interface with integrated 3-port switch
- With many communication options:
  PG/OP communication, PROFINET IO, PROFINET CBA, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7-communication (with loadable FBs)
- Fast, simple and end-to-end programming of a system with modular programs via STEP 7
- Compact SIMATIC Micro Memory Card (MMC)
- Optional PROFIBUS master for 32 PROFIBUS DP slaves (with master interface 6ES7138-4HA00-0AB0)

Note:
SIMATIC Micro Memory Card required for operation of CPU.

Overview

- To connect ET 200M to PROFINET IO (via copper line, RJ45) as an IO device
- 2 versions:
  - IM 153-4 PN STANDARD
  - IM 153-4 PN HIGH FEATURE:
    supports, in contrast to the STANDARD version, the operation of PROFIsafe F and HART modules
- Integrated 2-port switch
- 12 modules per station
- Usable I/O capacity: 192 bytes each
- Active bus backplane to hot-swap modules available as an option
- Baud rate 10 Mbit/s / 100 Mbit/s (autonegotiation / full duplex)
- I&M functions in accordance with PROFIBUS International guideline order no. 3.502, Version V1.1

Note:

Micro Memory Card with at least 64 KB required if not all the stations in the network support LLDP (Link Layer Discovery Protocol; proximity detection).

Overview

- For connection of ET 200M as IO Device to PROFINET IO (copper, RJ45)
- 2 versions:
  - IM 153-4 PN STANDARD
  - IM 153-4 PN HIGH FEATURE:
    additionally to the STANDARD version, operation of PROFIsafe F and HART modules
- Integrated 2-port switch
- 12 modules per station
- Usable I/O quantity structure: 192 bytes each
- Active backplane bus for hot swapping of modules optionally available
- Baud rate 10 Mbit/s / 100 Mbit/s (Autonegotiation/Full Duplex)
- I&M functions according to PNO-Guideline Order-No. 3.502, Version V1.1

Notes:

Micro Memory Card with min. 4 KB required if not all participants in the network support LLDP (Link Layer Discovery Protocol; neighbor detection).

SIPLUS extreme products are based on Siemens Industry standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme-specific information was added.

Product type designation	SIPLUS ET 200 M IM 153-4 PN
Order number	6AG1 153-4AA01-7XB0
Order No. based on	6ES7 153-4AA01-0XB0
Ambient temperature range	-25 °C ... + 70 °C
Conformal coating	Coating of the printed circuit boards and the electronic components
Technical data	The technical data of the standard product applies except for the ambient conditions.
Ambient conditions	
Relative humidity	5 … 100 % Condensation permissible
Biologically active substances	Conformity with EN 60721-3-3, Class 3B2 mold and fungal spores (except fauna)
Chemically active substances	Conformity with EN 60721-3-3, Class 3C4 incl. salt mist and ISA–S71.04 severity level G1; G2; G3; GX [1] [2]
Mechanically active substances	Conformity with EN 60721-3-3, Class 3S4 including conductive sand, dust [2]
Air pressure (depending on the highest positive temperature range specified)	1080 ... 795 hPa (-1000 … +2000 m) See ambient temperature range
	795 ... 658 hPa (+2000 ... +3500 m) derating 10 K
	658 … 540 hPa (+3500 … +5000 m) derating 20 K

[1] ISA-S71.04 severity level GX: Long-term load: SO_2 < 4.8 ppm; H_2S < 9.9 ppm; Cl < 0.2 ppm; HCl < 0.66 ppm; HF < 0.12 ppm; NH < 49 ppm; O_3 < 0.1 ppm; NOX < 5.2 ppm
Limit value (max. 30 min/d): SO_2 < 17.8 ppm; H2S < 49.7 ppm; Cl < 1.0 ppm; HCl < 3.3 ppm; HF < 2.4 ppm; NH < 247 ppm; O_3 < 1.0 ppm; NOX < 10.4 ppm

[2] The supplied plug covers must remain in place over the unused interface when operated in atmospheres containing corrosive gases!

The technical documentation on SIPLUS can be found here: www.siemens.com/siplus-extreme

Ordering data	Order No.
SIPLUS ET 200M interface connection IM 153-4 PN (extended temperature range and medial exposure) IO Device to connect an ET 200M to PROFINET [1]	**6AG1 153-4AA01-7XB0**
Accessories	See SIMATIC ET 200M interface module IM 153-4 PN

[1] To operate the IM153-4, an MMC is required with at least 64 KB memory. Cards with higher memory capacity may also be used.

IM 154-4 PN

2

Overview

Interface module for processing the communication between ET 200pro and a higher-level controller over PROFINET IO.

Ordering data

	Order No.		Order No.
IM 154-4 PN High Feature interface module	**6ES7 154-4AB10-0AB0**	*Accessories (continued)*	
For communication between ET 200pro and higher-level controllers over PROFINET IO; support of PROFIsafe		**IE M12 connecting cables**	
Accessories		Preassembled, with two M12 connectors, up to 85 m	
CM IM PN connection module M12, 7/8"	**6ES7 194-4AJ00-0AA0**	• 0.3 m long	**6XV1 870-8AE30**
		• 0.5 m long	**6XV1 870-8AE50**
For connecting PROFINET PN and 24 V power supply to PROFINET interface modules, 2 x M12 and 2 x 7/8"		• 1.0 m long	**6XV1 870-8AH10**
		• 1.5 m long	**6XV1 870-8AH15**
		• 2.0 m long	**6XV1 870-8AH20**
CM IM PN connection module 2xRJ45	**6ES7 194-4AF00-0AA0**	• 3.0 m long	**6XV1 870-8AH30**
		• 5.0 m long	**6XV1 870-8AH50**
For connecting PROFINET PN and 24 V power supply to PROFINET interface modules, 2 x RJ45 and 2 x push-pull power connector		• 10 m long	**6XV1 870-8AN10**
		• 15 m long	**6XV1 870-8AN15**
		• Other special lengths with 90° or 180° cable outlet	see http://support.automation.siemens.com/WW/view/en/26999294
CM IM PN 2xSCRJ FO connection module	**6ES7 194-4AG00-0AA0**	**7/8" sealing caps**	**6ES7 194-3JA00-0AA0**
		1 pack = 10 units	
For connecting PROFINET PN and 24 V power supply to PROFINET interface modules, 2 x SCRJ FO and 2 x push-pull power connector		**7/8" connecting cable to power supply**	
		5-core, 5 x 1.5 mm^2, trailing type, preassembled with two 7/8" connectors, 5-pin, up to 50 m	
M12 sealing cap	**3RX9 802-0AA00**	• 1.5 m long	**6XV1 822-5BH15**
		• 2.0 m long	**6XV1 822-5BH20**
For protection of unused M12 connections with ET 200pro		• 3.0 m long	**6XV1 822-5BH30**
		• 5.0 m long	**6XV1 822-5BH50**
Industrial Ethernet Switches SCALANCE X208PRO	**6GK5 208-0HA00-2AA6**	• 10 m long	**6XV1 822-5BN10**
		• 15 m long	**6XV1 822-5BN15**
with integral SNMP access, online diagnostics, copper cable diagnostics and PROFINET diagnostics for configuring line, star and ring topologies, IP65 degree of protection; with eight 10/100 Mbit/s M12 ports, incl. eleven M12 dust protection caps		• Other special lengths with 90° or 180° cable outlet	see http://support.automation.siemens.com/WW/view/en/26999294
		Power cable	**6XV1 830-8AH10**
		5-core, 5 x 1.5 mm^2, trailing type, sold by the meter, minimum order quantity 20 m, maximum order quantity 1,000 m	
		7/8" cable connector	
		For ET 200eco, with axial cable outlet	
		• with male insert, 5 per pack	**6GK1 905-0FA00**
		• with female insert, 5 per pack	**6GK1 905-0FB00**

Ordering data	Order No.		Order No.

Accessories (continued)

Industrial Ethernet FastConnect installation cables		**General accessories**	
• **IE FC TP Standard Cable GP 2 x 2**; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	6XV1 840-2AH10	**ET 200pro rack**	
		• Narrow, for interface, electronics and power modules	
		- 500 mm	6ES7 194-4GA00-0AA0
		- 1000 mm	6ES7 194-4GA60-0AA0
		- 2000 mm, can be cut to length	6ES7 194-4GA20-0AA0
• **IE FC TP Trailing Cable 2 x 2**; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	6XV1 840-3AH10	• Compact, for interface, electronics and power modules	
		- 500 mm	6ES7 194-4GC70-0AA0
		- 1000 mm	6ES7 194-4GC60-0AA0
• **IE FC TP Trailing Cable GP 2 x 2**; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	6XV1 870-2D	- 2000 mm, can be cut to length	6ES7 194-4GC20-0AA0
		• Wide, for interface, electronics, power modules and motor starters	
		- 500 mm	6ES7 194-4GB00-0AA0
• **IE TP Torsion Cable GP 2 x 2**; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	6XV1 870-2F	- 1000 mm	6ES7 194-4GB60-0AA0
		- 2000 mm, can be cut to length	6ES7 194-4GB20-0AA0
• **IE FC TP Marine Cable 2 x 2**; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	6XV1 840-4AH10	• Wide, for I/O modules and motor starters	
		- 500 mm	6ES7 194-4GD00-0AA0
		- 1000 mm	6ES7 194-4GD10-0AA0
		- 2000 mm	6ES7 194-4GD20-0AA0
Power Plug PRO	6GK1907-0AB10-6AA0	**Spare fuse**	6ES7 194-4HB00-0AA0
5-pole power plug for 2 x 24 V power supply in IP65/67-rated design, for on-site assembly, plastic housing, for SCALANCE X-200IRT and ET 200pro 1 pack = 1 unit		12.5 A quick-response, for interface and power modules, 10 items per package unit	
IE panel feedthrough		**SIMATIC Manual Collection**	6ES7 998-8XC01-8YE0
Control cabinet feedthrough for converting M12 D-coded connection system (IP65) to RJ45 connection system (IP20)		Electronic manuals on DVD, multi-language: S7-200, TD 200, S7-300, M7-300, C7, S7-400, M7-400, STEP 7, Engineering Tools, Runtime Software, SIMATIC DP (Distributed I/O), SIMATIC HMI (Human Machine Interface), SIMATIC NET (Industrial Communication)	
• 1 pack = 5 units	6GK1 901-0DM20-2AA5		
Push-Pull cable connector	6GK1 907-0AB10-6AA0		
For 1L+/ 2L+, unassembled			
Cover caps for Push-Pull RJ45 female connectors	6ES7 194-4JD50-0AA0	**SIMATIC Manual Collection – Update service for 1 year**	6ES7 998-8XC01-8YE2
5 items per pack		Scope of delivery: Current DVD "S7 Manual Collection" and the three subsequent updates	
Industrial Ethernet FastConnect Stripping Tool	6GK1 901-1GA00		

Note:

IM 154-6 PN IWLAN

2

Overview

Interface module for handling communication between
ET 200pro and host PROFINET IO controllers over Industrial
Wireless LAN (IWLAN) radio networks for 2.4 GHz or 5 GHz with
data transfer rates up to 54 Mbit/s.

- Protection against illegal access, espionage, tapping and
  falsification through use of effective encryption mechanisms
- Fast exchange of devices through use of interchangeable
  medium MICRO MEMORY CARD

Ordering data

	Order No.
IM 154-6 PN HF IWLAN interface module	
For communication between ET 200pro and host controllers over Industrial Wireless LAN (IWLAN) radio networks; support of PROFIsafe	
With various national approvals; refer to the current list of approvals	**6ES7 154-6AB00-0AB0**
With approval for USA	**6ES7 154-6AB50-0AB0**
Antennas with omnidirectional characteristic	
Mounting directly on IM154-6 PN HF IWLAN	
• ANT IM 154-6 IWLAN; 2 units	**6ES7 194-4MA00-0AA0**
For wall or pipe mounting	
• ANT 792-6MN; rod antenna N-Connect female 2.4 GHz; 1 unit	**6GK5 792-6MN00-0AA6**
• ANT793-6MN; rod antenna N-Connect female 5 GHz; 1 unit	**6GK5 793-6MN00-0AA6**
For use with the RCoax antenna system	
• ANT 792-4DN; RCoax N-Connect female 2.4 GHz; 1 unit	**6GK5 792-4DN00-0AA6**
• ANT793-4MN; RCoax N-Connect female 5 GHz; 1 unit	**6GK5 793-4MN00-0AA6**
Access Points SCALANCE W and Power Supplies PS791	See chapter 8

	Order No.		Order No.

Accessories

7/8" connecting cable to power supply

5-core, 5 x 1.5 mm², trailing type, pre-assembled with two 7/8" connectors

• 1.5 m long	6XV1 822-5BH15
• 2.0 m long	6XV1 822-5BH20
• 3.0 m long	6XV1 822-5BH30
• 5.0 m long	6XV1 822-5BH50
• 10 m long	6XV1 822-5BN10
• 15 m long	6XV1 822-5BN15
• Other special lengths with 90° or 180° cable outlet	See http:// support.automation.siemens.com /WW/view/en/26999294

Power cable — 6XV1 830-8AH10

5-core, 5 x 1.5 mm², trailing type, sold by the meter, minimum order quantity 20 m, maximum order quantity 1,000 m

7/8" cable connector — 6GK1 905-0FB00

For ET 200eco, with axial cable outlet; with socket insert, pack of 5

Twisted Pair cables 4x2 with RJ45 connectors

• 0.5 m long	6XV1 870-3QE50
• 1 m long	6XV1 870-3QH10
• 2 m long	6XV1 870-3QH20
• 6 m long	6XV1 870-3QH60
• 10 m long	6XV1 870-3QN10

Crossed Twisted Pair cables 4x2 with RJ45 connectors

• 0.5 m long	6XV1 870-3RE50
• 1 m long	6XV1 870-3RH10
• 2 m long	6XV1 870-3RH20
• 6 m long	6XV1 870-3RH60
• 10 m long	6XV1 870-3RN10

General accessories

ET 200pro rack

- Narrow, for interface, electronics and power modules
  - 500 mm — 6ES7 194-4GA00-0AA0
  - 1000 mm — 6ES7 194-4GA60-0AA0
  - 2000 mm, can be cut to length — 6ES7 194-4GA20-0AA0
- Compact, for interface, electronics and power modules
  - 500 mm — 6ES7 194-4GC70-0AA0
  - 1000 mm — 6ES7 194-4GC60-0AA0
  - 2000 mm, can be cut to length — 6ES7 194-4GC20-0AA0
- Wide, for interface, electronics, power modules and motor starters
  - 500 mm — 6ES7 194-4GB00-0AA0
  - 1000 mm — 6ES7 194-4GB60-0AA0
  - 2000 mm, can be cut to length — 6ES7 194-4GB20-0AA0
- Wide, for I/O modules and motor starters
  - 500 mm — 6ES7 194-4GD00-0AA0
  - 1000 mm — 6ES7 194-4GD10-0AA0
  - 2000 mm — 6ES7 194-4GD20-0AA0

Spare fuse — 6ES7 194-4HB00-0AA0

12.5 A quick-response, for interface and power modules, 10 items per package unit

Labels — 3RT1 900-1SB20

20 x 7 mm, pale turquoise, 340 units per pack

SIMATIC Micro Memory Card

• 64 KB	6ES7 953-8LF20-0AA0
• 128 KB	6ES7 953-8LG20-0AA0
• 512 KB	6ES7 953-8LJ30-0AA0

SIMATIC Manual Collection — 6ES7 998-8XC01-8YE0

Electronic manuals on DVD, multi-language: S7-200, TD 200, S7-300, M7-300, C7, S7-400, M7-400, STEP 7, Engineering Tools, Runtime Software, SIMATIC DP (Distributed I/O), SIMATIC HMI (Human Machine Interface), SIMATIC NET (Industrial Communication)

SIMATIC Manual Collection – Update service for 1 year — 6ES7 998-8XC01-8YE2

Scope of delivery: Current DVD "S7 Manual Collection" and the three subsequent updates

PROFINET/Industrial Ethernet
SIMATIC ET 200pro – Interface modules

IM 154-8 PN/DP CPU

Overview

- CPU with PLC functionality equivalent to S7-315-2 PN/DP provides distributed intelligence for preprocessing
- Interface module for exchanging pre-processed I/O data between the ET 200pro and a higher-level master/IO Controller via PROFIBUS DP/PROFINET IO
- PROFINET IO Controller to operate distributed I/Os on PROFINET
- Component based Automation (CBA) on PROFINET
- PROFINET proxy for intelligent devices on PROFIBUS DP in Component Based Automation (CBA)
- PROFINET interface with 3-port switch
- Isochronous mode on PROFIBUS or PROFINET
- Integral Web server with the option of creating user-defined Web sites
- Fast, simple and end-to-end programming of a system with modular programs via STEP 7
- Fail-safe IM 154-8F PN/DP CPU PROFIsafe available

Micro Memory Card required for operation of CPU.

Accessories (continued)

Industrial Ethernet FastConnect installation cables

• FastConnect standard cable	**6XV1 840-2AH10**
• FastConnect trailing cable	**6XV1 840-3AH10**
• FastConnect marine cable	**6XV1 840-4AH10**

Industrial Ethernet FastConnect installation cables

• IE FC TP Trailing Cable GP 2 x 2; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	**6XV1 870-2D**
• IE TP Torsion Cable GP 2 x 2; Sold by the meter, max. order quantity 1000 m; Minimum order quantity 20 m	**6XV1 870-2F**

Industrial Ethernet FastConnect Stripping Tool — **6GK1 901-1GA00**

IE Connecting Cable M12-180/M12-180

Preassembled IE FC TP Trailing Cable GP 2 x 2 (PROFINET Type C) with two 4-pin M12 plugs (4-pin, D-coded), degree of protection IP65/IP67, length:

• 0.3 m	**6XV1 870-8AE30**
• 0.5 m	**6XV1 870-8AE50**
• 1.0 m	**6XV1 870-8AH10**
• 1.5 m	**6XV1 870-8AH15**
• 2.0 m	**6XV1 870-8AH20**
• 3.0 m	**6XV1 870-8AH30**
• 5.0 m	**6XV1 870-8AH50**
• 10 m	**6XV1 870-8AN10**
• 15 m	**6XV1 870-8AN15**

PROFINET M12 connecting cable, trailing cable preassembled at both ends with angled M12 connectors (male insert)

• 3.0 m	**3RK1 902-2NB30**
• 5.0 m	**3RK1 902-2NB50**
• 10 m	**3RK1 902-2NC10**

PROFINET M12 connecting cable, trailing cable preassembled at one end with angled M12 connector (male insert at one end, other end unconnected)

• 3.0 m	**3RK1 902-2HB30**
• 5.0 m	**3RK1 902-2HB50**
• 10 m	**3RK1 902-2HC10**

Accessories (continued)

IE FC M12 Plug PRO

PROFINET M12 plug connector, D-coded with fast connection system, axial cable outlet

• 1 unit	**6GK1 901-0DB20-6AA0**
• 8 units	**6GK1 901-0DB20-6AA8**
PROFINET M12 plug connector, D-coded, angled	**3RK1 902-2DA00**

IE panel feedthrough — **6GK1 901-0DM20-2AA5**

Cabinet feedthrough for converting from the M12 connection system (D-coded, IP65/IP67) to the RJ45 connection system (IP20), 1 pack = 5 units

7/8" connecting cable to power supply

5-core, 5 x 1.5 mm^2, trailing type, preassembled with two 7/8" connectors (axial cable outlet), 5-pin, up to 50 m
Length:

• 1.5 m	**6XV1 822-5BH15**
• 2.0 m	**6XV1 822-5BH20**
• 3.0 m	**6XV1 822-5BH30**
• 5.0 m	**6XV1 822-5BH50**
• 10 m	**6XV1 822-5BN10**
• 15 m	**6XV1 822-5BN15**
• Other special lengths with 90° or 180° cable outlet	See http://support.automation.siemens.com/WW/view/en/26999294

power cable, can be trailed, 5 x 1.5 mm^2, preassembled at both ends with 7/8" angled connectors (female insert at one end, male insert at the other end)
Length:

• 3.0 m	**3RK1 902-3NB30**
• 5.0 m	**3RK1 902-3NB50**
• 10 m	**3RK1 902-3NC10**

Power cable, can be trailed, 5 x 1.5 mm^2, preassembled at one end with 7/8" angled connector with female insert (female insert at one end, other end unconnected)
Length:

• 3.0 m	**3RK1 902-3GB30**
• 5.0 m	**3RK1 902-3GB50**
• 10 m	**3RK1 902-3GC10**

Power cable — **6XV1 830-8AH10**

5-core, 5 x 1.5 mm^2, trailing type, sold by the meter, minimum order quantity 20 m, maximum order quantity 1,000 m

2

Overview

- Interface module for SIMATIC ET 200pro with integrated fail-safe CPU

- CPU with PLC functionality equivalent to CPU S7-315F PN/DP; with distributed intelligence for preprocessing

- For constructing a fail-safe automation system for plants with increased safety requirements

- Complies with safety requirements up to SIL 3 according to IEC 61508, IEC 62061, up to PLe according to ISO 13849-1:2006 and Cat. 4 according to EN 954-1

- For high-performance control solutions in ET 200pro

- Increase of the availability of systems and machines

- Integral Web server with the option of creating user-defined Web sites

- Isochronous mode on PROFIBUS or PROFINET

- PROFINET IO Controller for up to 128 IO Devices

- PROFINET interface with integrated 3-port switch

- With many communication options:
  PG/OP communication, PROFINET IO, PROFINET CBA, open IE communication (TCP, ISO-on-TCP and UDP), web server and S7-communication (with loadable FBs)

- Fast, simple and end-to-end programming of a system with modular programs via STEP 7

- Compact SIMATIC Micro Memory Card (MMC)

Note:

SIMATIC Micro Memory Card required for operation of CPU.

PROFINET/Industrial Ethernet
SIMATIC ET 200eco

ET 200eco PN

2

Overview

- Compact block I/O for processing digital, analog and IO-Link signals for connecting to the PROFINET bus system
- Cabinet-free design with degree of protection IP65/66/67 with M12 connections
- Very rugged and resistant metal enclosure and encapsulated
- Compact module in two types of enclosures:
  - 30 mm x 200 mm x 37 mm (W x H x D, long and narrow enclosure), with 4 x M12 for digital signals
  - 60 mm x 175 mm x 37 mm (W x H x D, short and wide enclosure), with 8 x M12 for digital signals and IO-Link
  - 60 mm x 175 mm x 37 mm (W x H x D, short and wide enclosure) with 4 x M12 or 8 x M12 for analog signals
- PROFINET connection: 2 x M12 and automatic PROFINET address assignment
- Data transmission rate 100 Mbit/s
- LLDP proximity detection without PG and Fast Startup (boot up within approx 0.5 seconds)
- Supply and load voltage connection: 2 x M12
- Module variance:
  - 8 DI
  - 16 DI
  - 8 DO (2 A)
  - 8 DO (1.3 A)
  - 8 DO (0.5 A)
  - 16 DO (1.3 A)
  - 8 DI/DO (1.3 A),
  - 8 AI (U, I, TC, RTD)
  - 4 AO (U, I)
  - 4 IO-Link + 8 DI + 4 DO (1.3 A)
- Channel-specific diagnostics

PROFINET/Industrial Ethernet
Motion Control System SIMOTION

The SIMOTION system

■ **Overview**

The system approach

SIMOTION is recommended for all machines with Motion Control tasks – from simple to high-performance. The focus is on a simple and flexible solution for the greatest possible range of Motion Control tasks.

SIMOTION is based on the fusion of Motion Control with two other control functions which are found in most machines: PLC and technology functions.

This approach means that Motion Control of axes and control of the complete machine can be implemented within the same system. The same applies to technology functions, such as pressure control of a hydraulic axis. A seamless switch can be made from position-controlled positioning mode to pressure control.

Combining the three open-loop control functions of Motion Control, PLC and technology functions has the following benefits:

- Reduced engineering overhead and increased machine performance
- Fast system response – Time-critical interfaces between the individual components are no longer required
- Simple, uniform and transparent programming as well as diagnostics of the entire machine

The SIMOTION system is made up of three components:

Engineering system

SCOUT enables Motion Control, PLC and technology functions to be incorporated in one comprehensive, integrated system and provides all the necessary tools: From programming and parameterization through testing and commissioning, to diagnostics.

Runtime system

The runtime system offers a high-performance execution system for cyclic and sequential tasks. The runtime software modules make the different PLC, Motion Control and technology functions available. By selecting the appropriate modules, the overall functionality of the system can be flexibly adapted to the machine.

Hardware platforms

The hardware platforms are the basis of the SIMOTION Motion Control System. The application created with the engineering system and the associated runtime software modules can be implemented on different hardware platforms.

The fast path to the automation solution

Thanks to the SIMOTION system components and the concept of ready-to-apply standard applications and complete machine solutions called SIMOTION Easy Set (Ready to Run), it is possible to reduce engineering costs, speed up project completion times and implement successful automation systems more quickly.

■ Overview

SIMOTION D – Compact and integrated in the drive

In SIMOTION D, the SIMOTION functionality is integrated directly in the closed-loop control module of the SINAMICS S120 drive system. Therefore, the complete system (consisting of the open-loop control and the drive) is extremely compact and powerful.

SIMOTION D is finely scalable – starting with the compact SIMOTION D410 Control Unit for single-axis applications up to the powerful SIMOTION D4x5-2 multi-axis system for up to 128 axes.

This flexibility ensures a quick response to changing requirements in automation without having to change the system.

The SIMOTION D Control Units are available in the following versions:

- SIMOTION D410 are compact Control Units for single-axis applications and are snapped on to the SINAMICS S120 PM340 Power Modules in blocksize format.

- SIMOTION D4x5/D4x5-2 are Control Units for multi-axis applications in the SINAMICS S120 booksize format and are available in the following performance versions:
  - SIMOTION D425 (BASIC performance)
    Control Unit for up to 16 axes
  - SIMOTION D435 (STANDARD performance)
    Control Unit for up to 32 axes
  - SIMOTION D445-1 (HIGH performance)
    Control Unit for up to 64 axes
  - SIMOTION D445-2 DP/PN (HIGH performance)
    Control Unit for up to 64 axes
  - SIMOTION D455-2 DP/PN (ULTRA-HIGH performance)
    Control Unit for up to 128 axes

With SIMOTION D, the PLC, Motion Control and technology functions as well as the SINAMICS S120 drive software run on shared control hardware. The IEC 61131-3-compliant PLC integrated in SIMOTION D means that the system is not just capable of controlling motion sequences, but that the entire machine can also be controlled with a single compact unit.

For visualization and operation, SIMATIC HMI devices can be connected via PROFIBUS, PROFINET or Ethernet depending on the SIMOTION D version. Distributed I/O is connected via PROFIBUS or PROFINET.

SIMOTION C – Modularity and flexibility

SIMOTION C is a Motion Controller based on the SIMATIC S7 300 design.

It is available in two versions which differ in terms of their interfaces, but not with respect to Motion Control functionality or performance. In addition to the already integrated interfaces, both controllers can be expanded using I/O modules from the SIMATIC S7 300 range.

Version C240 with its four drive and encoder interfaces is ideal for machine automation applications and the operation of drives with analog setpoint interface or stepper drives. As a result, this version is particularly suitable for machine retrofits.

Version C240 PN with its three PROFINET ports, which support PROFINET with IRT as well as TCP/IP and RT communication, is used to automate machines on the basis of PROFINET. It is capable of operating PROFINET drives with PROFIdrive, as well as PROFINET I/Os, such as SIMATIC ET 200S High Speed.

Both versions are equipped additionally with two PROFIBUS interfaces via which drives with PROFIdrive profile as well as standard I/Os can be connected. In addition, both controllers feature an Industrial Ethernet interface, thus offering further communication options.

PROFINET/Industrial Ethernet
Motion Control System SIMOTION

Hardware platforms

■ **Overview** (continued)

SIMOTION P – Open for multiple tasks

SIMOTION P is a PC-based Motion Control System.
An Embedded PC for Motion Control has been added to the portfolio of PC-based controls. As a result, the well-proven SIMOTION P350-3 with Windows XP Professional operating system is now available for applications other than high-end tasks, as was previously the case. SIMOTION P320-3 has been created for Embedded PC Motion Control applications. Thanks to the Embedded Windows operating system and elimination of rotating parts in the PC, the SIMOTION P320-3 is particularly compact and ideal for applications in harsh environments. Both PCs are equipped with the usual real-time expansion for SIMOTION. This means that in addition to SIMOTION machine applications, it is possible to run other PC applications at any time including, for example, the SIMOTION engineering system, an operator application, a process data evaluation routine or standard PC applications.

With its excellent processor performance, SIMOTION P350-3 has been developed especially for applications with exacting performance requirements (such as hydraulic applications with highly dynamic position and pressure control loops). SIMOTION P320-3 is particularly suitable for harsh operating environments. Its small footprint makes it the preferred choice for many applications in which available space and rugged design play a key role.

The SIMOTION P350-3 can be operated by a variety of different panel fronts. These are available in various screen sizes and can either be operated using a keyboard and mouse, or a touch screen. The SIMOTION P320-3 can be linked to the SIMOTION fronts by means of the Remote Panel PC Kit.

SIMOTION P350-3 is available in either a PROFIBUS or PROFINET version for the connection of I/Os, while SIMOTION P320-3 is available only as a PROFINET version.

2

■ Overview

Motion Control architectures with SIMOTION and SINAMICS

With SIMOTION and SINAMICS, a range of different automation structures can be implemented over PROFINET. In this case, central architectures comprising a controller (e.g. SIMOTION P) are supported as well as decentralized, distributed architectures with several distributed controllers (e.g. SIMOTION D with SINAMICS S120).

When SIMOTION is integrated in a complete automation system, hierarchic automation structures often result.

Thanks to the ability to configure SIMOTION as controller and device concurrently on the same PROFINET interface (I-Device), both hierarchic automation structures and modular machine concepts can be implemented easily and without additional components:

- On the one hand, SIMOTION as a device can communicate with a higher-level controller, e.g. a SIMATIC S7 PLC or a non-Siemens PLC.
- On the other hand, SIMOTION can also communicate with local IO devices, such as drives and I/O modules, in the role of IO Controller.

Via controller-to-controller and controller-to-device relationships based on PROFINET IO with IRT, it is also possible to synchronize several axes via several SIMOTION IO Controllers. This functionality is known as distributed synchronous operation.

PROFINET for SIMOTION

SIMOTION is fully integrated into the PROFINET communication. Interaction with the following PROFINET components is possible:

- Distributed I/O with SIMOTION
- SINAMICS with SIMOTION
- SIMOTION as an IO-Device with a SIMATIC S7 CPU
- Active network components (e.g. SCALANCE) with SIMOTION and SINAMICS
- Wireless with SIMOTION and SINAMICS
- PROFIsafe to a SIMATIC F-CPU. The PROFIsafe message frames are routed from SIMOTION to the lower-level drives.

When an automation topology is configured, the real-time classes RT and IRT can be used alongside each other on the same network or cable. It must, however, be noted that not all devices support both real-time classes RT and IRT. For devices that should be synchronized with IRT, it is important that all the PROFINET components that lie in between support the IRT real-time class, especially the SCALANCE switches of the X200 family.

■ **Overview**

PROFIdrive – The standardized drive profile for PROFIBUS and PROFINET

PROFIdrive defines the device behavior and the access procedure to internal drive data for electrical drives on PROFIBUS and PROFINET, from simple frequency converters up to high-performance servo controllers.

It contains a detailed description of how the communication functions "slave-to-slave communication", "constant bus cycle time" and "isochronous operation" are used for drive applications. In addition, it clearly specifies all device characteristics which influence interfaces connected to a controller over PROFIBUS or PROFINET. This includes the sequence control, encoder interface, standardization of values, definition of standard messages, and access to drive parameters, etc.

The PROFIdrive profile supports both central as well as distributed motion control concepts.

What are profiles?

Profiles specify specific properties and responses for devices and systems in automation. In this manner, manufacturers and users pursue the goal of defining common standards. Devices and systems that comply with a multi-vendor profile can interoperate on a fieldbus and can be operated interchangeably to a certain extent.

Do different profile types exist?

A distinction is made between application profiles (general or specific) and system profiles:

- Application profiles (also known as device profiles) mainly refer to devices (e.g. drives) and contain an agreed selection of bus communication modes, as well as specific device applications.
- System profiles describe system classes and include the master functionality, program interfaces and integration methods.

Is PROFIdrive future-proof?

PROFIdrive has been specified by PROFIBUS and PROFINET International (PI) and has been laid down in IEC 61800-7 as a future-proof standard.

The basic philosophy: Keep it simple

The PROFIdrive profile tries to keep the drive interface as simple as possible and free from technology functions. This philosophy ensures that reference models as well as the functionality and performance of the PROFIBUS/PROFINET master have no or very little influence on the drive interface.

One drive profile – Different application categories

The integration of drives into automation solutions depends strongly upon the drive task. To cover the extensive range of drive applications from the simple frequency converter up to highly dynamic, synchronized multi-axis systems with a single profile, PROFIdrive defines six application categories which define most drive applications:

- Category 1 – Standard drives (such as pumps, fans, stirring units, etc.)
- Category 2 – Standard drives with technology functions
- Category 3 – Positioning drives
- Category 4 – Motion control drives with central, higher-level motion control intelligence and the patented "Dynamic Servo Control" position control concept
- Category 5 – Motion control drives with central, higher-level motion control intelligence and position setpoint interface
- Category 6 – Motion control drives with distributed motion control intelligence integrated in the drives

■ Design

The device model of PROFIdrive

PROFIdrive defines a device model based on function modules which cooperate in the device and generate the intelligence of the drive system. These modules have objects assigned to them which are described in the profile and are defined with respect to their functions. The overall functionality of a drive is therefore described through the sum of its parameters.

In contrast to other drive profiles, PROFIdrive defines only the access mechanisms to the parameters as well as a subset of approx. 30 profile parameters such as the fault buffer, drive control and device identification.

All other parameters are vendor-specific which gives drive manufacturers great flexibility with respect to implementing function modules. The elements of a parameter are accessed acyclically via data records.

As a communication protocol, PROFIdrive uses DP-V0, DP-V1, and the DP-V2 expansions for PROFIBUS including the functions "Slave-to-slave communication" and "Isochronous operation", or PROFINET IO with real-time classes RT and IRT.

PROFIdrive for Motion Control

Utilization category 4 is the most important for highly dynamic and highly complex Motion Control tasks. This application category describes in detail the master/slave relationship between the Controller and the drives which are connected to each other over PROFIBUS and PROFINET.

The DSC (Dynamic Servo Control) function significantly improves the dynamic response and stiffness of the position control loop by minimizing the dead times which usually occur for speed setpoint interfaces with an additional, relatively simple feedback network in the drive. The position control loop is closed in the drive which permits very fast position control cycles (e.g. 125 µs for SINAMICS S120) and thus limits dead times exclusively to the control behavior.

PROFIdrive for SIMOTION

In SIMOTION, the drive interface is realized in accordance with the PROFIdrive V4 profile and utilization categories 1 to 4 (category 4 with and without DSC).

When SINAMICS S120 operates with SIMOTION, utilization category 4 with DSC is used as standard.

■ More information

For further information on SIMOTION and SINAMICS, see Catalog PM 21 and the Internet at:

Overview

SINUMERIK 840D sl with SINAMICS S120

The SINUMERIK 840D sl offers modularity, open architecture, flexibility, uniform operation, programming and visualization and provides a system platform with future-oriented functions for nearly all technologies. Integrated into the SINAMICS S120 drive system and complemented by the SIMATIC S7-300 automation system, the SINUMERIK 840D sl forms a complete digital system that is best suited for the mid to upper performance range.

The SINUMERIK 840D sl distinguishes itself through its flexibility, maximum dynamics, precision, and optimum integration in networks.

The SINUMERIK 840D sl combines CNC, HMI, PLC, closed-loop control and communication tasks on one SINUMERIK NCU. The NCU modules are available in three expansion stages with different power.

SINAMICS S120 can be used to solve complex drive tasks for a very wide spectrum of industrial applications, and has been designed as a modular system toolbox. From a wide range of matched components and functions, the user selects just the combination that best suits his own particular requirements. All SINUMERIK 840D sl and SINAMICS S120 components, including the motors and encoders, are interconnected via the joint interface DRIVE-CLiQ.

Application

SINUMERIK 840D sl is used worldwide:

- Turning, drilling, milling, grinding, laser machining, nibbling and punching technologies
- Tool and Mold Making
- Press control
- High-Speed Cutting
- Woodworking and textile processing
- Handling
- Transfer lines
- Rotary transfer machines
- Large-scale and jobshop production

The SINUMERIK is available as an export version for use in countries where approval is required.

Integration

The following components can be connected to the SINUMERIK 840D sl:

- SINUMERIK operator panel front with TCU, PCU 50.3
- Machine control panel, Push Button Panel
- SINUMERIK handheld units
- Distributed PLC I/O via PROFIBUS DP and PROFINET connection
- SINAMICS S120 drive system
- Feed and main spindle motors

More information

More detailed information on the SINUMERIK 840D sl and SINAMICS S120 is provided in Catalog NC 61.
Further information is available on the Internet at:

Key Panels
SIMATIC HMI KP8/KP8F

■ Overview

SIMATIC HMI Key Panel KP8 PN/KP8F PN

- The KP8 PN and KP8F PN Key Panels are the innovative successor to the PP7 Push Button Panel
- The following two versions are available:
  - a *PROFINET version*
    each with 8 large backlit keys
  - a *PROFINET failsafe version*
    (with connection option e.g. an EMERGENCY-STOP push-button) each with 8 large backlit keys
- High flexibility in the smallest space at an extremely reasonable price
- On the rear, 8 I/O PINs are available as standard. These I/O PINs can be used for the connection of additional control elements.

Overview

- Ideal entry series from 3" to 15" for the operation and monitoring of compact machines and systems
- Clear process representation by the use of pixel graphics displays
- Intuitive operation by touch and tactile function keys
- Equipped with all necessary basic functions such as signaling system, recipe management, graph representation, vector graphics and language switching
- Simple connection to the controller via integrated Ethernet interface (TCP/IP, PROFINET) or separate version with RS485/422

PROFINET/Industrial Ethernet
Operating and Monitoring Devices

Comfort Panels – Standard

■ Overview

- Excellent HMI functionality for demanding applications
- Widescreen TFT displays with 4.3", 7.0", 9.0" and 12.1" diagonals (all 16 million colors) with up to 40% more visualization area as compared to the predecessor devices
- Integrated high-end functionality with archives, scripts, PDF/Word/Excel viewer, Internet Explorer, Media Player
- Dimmable displays from 0 to 100% via PROFIenergy, via the HMI project or via a controller
- Up-to-date industrial design
- Upright installation for all touch devices
- Optimal selection option: four Touch and four Key versions are available
- Data security in the event of power failure for the device and for the SIMATIC HMI memory card
- Innovative service and commissioning concept through second SD card (automatic backup)
- Easy project transfer via standard cable (standard Ethernet cable, standard USB cable)
- Maximum performance with short screen refresh times
- Suitable for harsh industrial environments thanks to extended approvals, such as Ex 2/22 and approvals for marine applications and for cast aluminum fronts from 7" upwards
- Wide range of communication options: PROFIBUS and PROFINET onboard, with 7" and above, 2 x PROFINET with integrated switch
- Key-operated devices with LED in every function key and new text input mechanism, similar to the keypads of mobile phones
- Key-operated devices with stamped keys for optimum tactile feedback
- All keys have a service life of 2 million operations
- Configuring with the WinCC engineering software of the TIA Portal

Overview

SIMATIC Mobile Panel

- Mobile control panel for operating plant and machinery directly from any place
- Enables an ideal view of the workpiece or process and at the same time direct access and visual contact to the control panel
- Flexible use due to easy reconnection during operation (Mobile Panel 177 and Mobile Panel 277) or
- wireless freedom (Mobile Panel 277(F) IWLAN)
- Pixel-graphics, high-luminance color display with touch screen (analog/resistive)
- PROFIBUS or PROFINET communication, PROFINET via WLAN with Mobile Panel 277(F) IWLAN
- Freely configurable and inscribable function keys (with LED) (not on Mobile Panel 277 10")

SIMATIC Mobile Panel 177 and SIMATIC Mobile Panel 277

- Two three-stage OK buttons;
  Optional versions with:
  - STOP button
  - STOP button, handwheel, key-operated switch and illuminated pushbutton (not with Mobile Panel 277 10")
- Communication options using serial, MPI/PROFIBUS or PROFINET coupling
- Connection point recognition for locally identifying the device by means of the connection point ID
- Fast system availability after plugging into the junction boxes
- The coupling for control purposes and the power supply are provided through the junction box and the connecting cable

SIMATIC Mobile Panel 277(F) IWLAN

- Wireless, mobile control panel for operating plant and machinery flexibly and independently of location
- WLAN communication in accordance with IEEE 802.11 a (b/g) and support of PROFINET
- Powerful batteries and flexible concept for changing permit battery replacement "on the fly" without interrupting operation
- Limited effective range and local identification of the device due to the use of transponder technology
- Low-cost, safety-oriented mobile operation and monitoring using RFID technology (MOBY D) for plant with safety equipment already installed (e.g. robot cells)
- Optional versions with: Handwheel, key-operated switch and illuminated pushbutton
- Fail-safe control elements of the SIMATIC Mobile Panel 277F IWLAN using PROFIsafe:
  - Two three-stage OK buttons
  - Emergency-stop pushbuttons

■ **Overview**

SIMATIC Panels

SIMATIC panels are compact and robust operator panels for use directly on the machine – finely graded in power and comfort.

Devices with a PROFINET connection are used in solutions based upon the Industrial Ethernet standard for automation.

SIMATIC TP 177B DP/PN

- Touch Panel with comprehensive functionality for the operation and monitoring of machines and plant
- Pixel graphics display with analog touch screen
  - 4.3" TFT widescreen color or
  - 5.7" STN blue mode/color
- PROFINET interface for the on-board color versions
- Drivers for other manufacturers' controllers are also available
- Message buffer contents are retained even when the panel is switched off with no battery
- Extra 4 function keys on the 4" version for optimal operating efficiency
- The TP 177B PN/DP is also available with a high-grade steel front (EN 1672-2). The high-grade steel front also complies with the higher requirements, e.g. from the food industry.

SIMATIC OP 177B DP/PN

- Touch/key panel with comprehensive functionality for the operation and monitoring of machines and plant
- Message buffer contents are retained even when the panel is switched off with no battery
- Pixel graphics STN display blue mode/color with analog touch screen and extra 32 function keys
- Ethernet with the on-board color versions
- Drivers for other manufacturers' controllers are also available
- Installation compatible to OP17

SIMATIC TP 277 6"

- Touch Panel with comprehensive functionality for the operation and monitoring of machines and plant
- Message buffer contents are retained even when the panel is switched off with no battery
- Pixel-graphics TFT display with 256 colors and touch screen
- Interfaces for communication with Siemens SIMATIC S7 (e.g. MPI, PROFIBUS DP) are on board
- Ethernet on board
- Use of scripts and archives
- Drivers for other manufacturers' controllers are also available
- Installation compatible to TP 270 6" and MP 270B 6"

SIMATIC OP 277 6"

- Operator Panel with comprehensive functionality for the operation and monitoring of machines and plant
- Message buffer contents are retained even when the panel is switched off with no battery
- Pixel-graphics TFT display with 256 colors
- 36 system keys, 24 freely configurable and inscribable function keys (18 with LED)
- Interfaces for communication with Siemens SIMATIC S7 (e.g. MPI, PROFIBUS DP) are on board
- Ethernet on board
- Use of scripts and archives
- Drivers for other manufacturers' controllers are also available
- Installation compatible to OP 270 6"

■ Overview

Multi Panels (MP)

Based on Windows CE, Multi Panels combine the robustness of operator panels with the flexibility of PCs. Like operator panels, they are used for operating and monitoring machinery on site. With ultimate performance they are suitable for demanding applications and their functionality can be expanded by installing additional Windows CE applications (Multi Panel and panel options).

SIMATIC MP 177

- PLC functionality can be directly integrated in the MP 177 platform via options
- The Multi Panel can be usefully extended with the Sm@rtService and Sm@rtAccess options
- Pixel-graphics 5.7" TFT widescreen color display (64k colors)
- All interfaces on-board, e.g. MPI, PROFIBUS DP, USB, PROFINET (Ethernet TCP/IP)
- The MP 177 6" Touch can also be supplied as a package, complete with a WinAC MP 177. For configuring the MP 177, a WinCC flexible 2008 SP1 Compact, Standard or Advanced is required.

SIMATIC MP 277

- Multi Panel with extensive functionality for operating and monitoring machinery on site
- Pixel-graphics TFT display with 64k colors in sizes of 7.5" and 10.4"
- Versions with touch or key functionality
- MPI, USB, PROFIBUS and PROFINET interfaces on-board
- Message buffer contents are retained even when the panel is switched off with no battery
- SD-/Multi Media Card Slot
- Operating system Window CE 5.0
- Configuration with SIMATIC WinCC flexible 2005 SP1 Standard or Advanced
- Can also be supplied with stainless steel front (EN 1672-2) and therefore meets the higher requirements e.g. in the food and drinks industry.

SIMATIC MP 377

- PLC functionality can be directly integrated in the MP 377 platform via options
- Pixel-graphics 12.1" or 15.1" or 19" widescreen color display (64k colors)
- MP 377 12" Touch, MP 377 15" Touch and MP 377 19" Touch: Touch screen (analog/resistive)
- MP 377 12" keys: 38 system keys, 36 freely configurable and inscribable function keys (36 with LED)
- The MP 377 15" Touch is also available with a stainless steel front (DIN EN 1672-2). The stainless steel front also complies with the higher requirements, e.g. from the food industry.
- All interfaces on-board, e.g. MPI, PROFIBUS DP, USB, PROFINET (Ethernet TCP/IP)

■ Overview

Rack PCs are flexible, fault-tolerant industrial PC systems for powerful yet compact applications using 19" technology.

Three device classes are available for various requirements:

SIMATIC IPC547 –
maximum performance at an attractive price

SIMATIC IPC647 –
maximum compactness combined with maximum industrial functionality

SIMATIC IPC847 –
maximum expandability and industrial functionality

Shared industrial functionality

- Maximum system performance for complex automation tasks and computationally intensive PC tasks in the industrial environment through use of Intel Core processors
- Designed for 24-hour continuous operation
- Monitoring and diagnostics functions (e.g. temperature, fan, watchdog)
- RAID1 configuration (mirrored drives), optionally in "hot swap" frames
- Compact dimensions for installation in control cabinets only 500 mm deep
- Dust protection thanks to overpressure ventilation concept with fan on the front and dust filter
- Lockable front panel or front door
- Service-friendly equipment design due to prepared telescopic rail mounting
- Universal implementation as an industrial workstation or server
- Operating system preinstalled and activated for fast startup
- Fast restoration of the delivery status of the HDD thanks to restore DVD
- High flexibility and expandability of components
- PCI and PCI-Express expansion slots
- Independent industrial product design

Rack PC

2

■ **Overview** (continued)

SIMATIC IPC547D and SIMATIC IPC547C – *maximum performance at an attractive price*

- Maximum processor performance in maximum configuration without loss of power (throttling) at ambient temperatures of up to 40 °C
- Optional RAID5 configuration (striping with parity) in "hot swap" frames
- Redundant AC power supply, optional
- Low noise output thanks to controlled fans
- Status and alarm LEDs at the front for signaling critical system states
- Availability for at least 1.5 years
- Guaranteed spare parts availability for at least 3 years

NEW with *SIMATIC IPC547D*:

- Intel Core i processors 2nd generation
- Hard disks with capacities up to 1 TB for large volumes of data
- Solid-State Drive (SSD), SLC optional

SIMATIC IPC647C and SIMATIC Rack PC 647B – *maximum compactness combined with maximum industrial functionality*

- Maximum compactness due to 3 free PCI/PCI Express slots for installing long expansion cards and integrated interfaces for communication, e.g. integrated PROFIBUS/MPI or PROFINET interface
- High thermal stability up to 50°C even at maximum processor performance
- High vibration/shock resistance thanks to special hard disk holders
- Service-friendly device design due, for example, to the replacement of filters/fans from the front without the need for tools, or opening of the enclosure with just one screw.
- Front LED concept for efficient self-diagnostics, e.g. monitoring of the hard disks in RAID1 configurators, fans or the status display for Ethernet, PROFINET and PROFIBUS.
- Integrated PROFIBUS DP/MPI or PROFINET interface (optional)
- High continuity of the components/design
- Motherboard developed and manufactured by Siemens
- Availability for 3 to 5 years
- Guaranteed spare parts availability for at least 5 years

NEW with *SIMATIC IPC647C*:

- Intel Core i processors
- Hard disks with capacities up to 500 GB for large volumes of data
- ECC memory, optional
- Solid-State Drive (SSD), SLC optional
- Redundant AC power supply, optional (available soon)
- Enhanced server functionality (available soon): Hardware RAID PCIe x8 controller, SAS hard disks in hot-swap frame with capacities up to 1 TB for large volumes of data

SIMATIC IPC847C – *maximum expandability and industrial functionality*

- Maximum expandability due to 11 free PCI/PCI Express slots for installing long expansion cards and integrated interfaces for communication, e.g. integrated PROFIBUS/MPI or PROFINET interface
- High thermal stability up to 50°C even at maximum processor performance
- High vibration/shock resistance thanks to special hard disk holders
- Intel Core i processors
- Optional RAID5 configuration (striping with parity) in "hot swap" frames
- Enhanced server functionality (available soon): Hardware RAID PCIe x8 controller, SAS hard disks in hot-swap frame with capacities up to 1 TB for large volumes of data
- Redundant AC power supply, optional
- Hard disks with capacities up to 500 GB for large volumes of data
- ECC memory, optional
- Solid-State Drive (SSD), SLC optional
- Service-friendly device design due, for example, to the replacement of filters/fans from the front without the need for tools, or opening of the enclosure with just one screw.
- Front LED concept for efficient self-diagnostics, e.g. monitoring of the hard disks in RAID1 configurators, fans or the status display for Ethernet, PROFINET and PROFIBUS.
- Integrated PROFIBUS DP/MPI or PROFINET interface (optional)
- High continuity of the components/design
- Motherboard developed and manufactured by Siemens
- 3 to 5 years availability
- Guaranteed spare parts availability for at least 5 years

Rack PC

Benefits

Rugged design

The overall design aims to achieve maximum safety for electromagnetic, vibration and shock loads. A well-designed pressurized ventilation concept ensures that even the maximum configuration can support high operating temperatures – and dust protection is included.

Service-friendly device design

Particular attention was paid to making servicing extremely simple. PC components (e.g. slots, memory modules) are readily accessible. Fan filters and fans can be replaced without tools even when unit is built-in.

Performance

Thanks to the use of the latest generation of Intel Pentium Dual Core to Core i 2nd processors, SIMATIC Rack PCs are flexibly scalable for your application.

System availability

SIMATIC racks can be ordered in custom configurations and are supplied ready for use. The design's high system availability can be further extended by means of additional data backup options (e.g. RAID1 or RAID5 system, redundant power supply, SIMATIC IPC Image & Partition Creator) and efficient self-diagnostics software (SIMATIC IPC DiagMonitor).

Integrated interfaces

Two onboard Gbit Ethernet interfaces are available for communication in the office world or at the control level. Integrated USB interfaces on the rear and front panels make connecting I/O devices from the PC world (e.g. external hard disks for mobile data backup, keyboard and/or mouse for operation) child's play. For advanced graphics applications, a spare PCI Express slot and a high-performance graphics card for the connection of two monitors are available.

Expandability

With up to 11 free PC slots, the SIMATIC Rack PC offers maximum leeway for expansions for installation in space-saving cabinets with a depth of just 500 mm.

Continuity

The SIMATIC Rack PC models can be ordered for a period of at least 1.5 years; spare parts remain obtainable for at least 3 years after active marketing is concluded. Long-term functionality of the hardware and software is also ensured. Long-term availability of PC components from the Intel embedded line ensures high investment protection.

■ Overview

The SIMATIC IPC847C is a very robust, high-performance industrial PC in 19" rack design (4 HU) with excellent industrial functionality.

It offers:

- Maximum expandability
- Extreme ruggedness
- Intel Core i technology

2

SIMATIC IPC847C

■ Overview

SIMATIC Box PC provide mechanical engineers, plant engineers and control cabinet makers with particularly rugged industrial PC systems for use in powerful yet compact applications.

The following device classes are available for various requirements:

- *SIMATIC IPC227 (Nanobox PC)* –
  the new Nanobox PC with maximum flexibility – absolutely maintenance-free

- *SIMATIC IPC427 (Microbox PC)* –
  ultra-compact and maintenance-free: The flexible embedded industrial PC

- *SIMATIC IPC627 (Box PC)* –
  maximum performance in the most restricted space

- *SIMATIC IPC827 (Box PC)* –
  maximum performance with high expandability

Shared industrial functionality:

- Extreme compactness
- Certification for global marketing
- System-tested with SIMATIC components
- High vibration/shock load during operation
- Wide operational temperature range
- Robust data storage with CompactFlash or Solid-State Drive (SSD)
- Integrated PROFIBUS or PROFIBUS/MPI interface (optional)
- Varied mounting possibilities for flexibility with installation
- Designed for 24-hour continuous operation
- Integrated parameterizable monitoring functions (temperature, fan, watchdog)
- High service friendliness
- Operating system preinstalled and activated for fast startup
- Motherboard developed and manufactured by Siemens
- Availability for 3 to 5 years
- Repairs and spare parts service for 5 years
- High continuity of the components/design
- Installation and software compatible with predecessor model
- Long-term availability of PC components from the Intel embedded line

Box PC

■ **Overview** (continued)

2

SIMATIC IPC227D –
for implementation of simple control, data collection or communication tasks

- Maximum compactness with approx. 1 liter enclosure volume with integrated industrial power supply for minimum space requirements in the control cabinet
- Maximum flexibility thanks four mounting options and interfaces on one side suitable for every installation situation
- Optimum variety of interfaces due to a large number of integrated interfaces such as a selectable serial port (RS232/RS485/CAN) and 2 x teaming-capable Gigabit LAN
- Maximum industrial functionality due to closed enclosure for optimum dust protection and non-volatile retentive memory
- Further device options for optimum adaptation to the application with additional PCIe slot or RS232 interfaces or digital I/O

SIMATIC IPC427 (Microbox PC) –
ultra-compact and maintenance-free: the flexible embedded industrial PC

- Fanless operation
- High performance with highly compact design
- Optimized for embedded applications
- Expandable with as many as 3 PC/104-Plus or PCI-104 I/O cards
- Flexible installation options due to DIN rail/wall/front upright mounting, even outside a control cabinet

SIMATIC IPC627 (Box PC) –
maximum performance in the most restricted space

- Maximum system performance for complex measuring, control and visualization tasks
- Highly compact for space-saving installation with compact enclosure design (6 liters in volume)
- Flexible, space-saving installation with mounting brackets or portrait assembly kits
- Rugged design for direct installation in the machine
- RAID1 controller onboard
- Maximum processor performance up to ambient temperature of 55 °C
- High shock/vibration resistance in all possible mounting positions
- High system availability
- Battery-backed SRAM as memory for WinAC data
- 2 x 7-segment display and 2 signal LEDs (freely programmable)

SIMATIC IPC827 (Box PC) –
maximum performance with high expandability

- Maximum system performance for complex measuring, control and visualization tasks
- High flexibility with 5 expansion slots and integral interfaces
- Flexible, space-saving installation with mounting brackets or portrait assembly kits
- Rugged design for direct installation in the machine
- RAID1 controller onboard
- Maximum processor performance up to ambient temperature of 55 °C
- High shock/vibration resistance in all possible mounting positions
- All interfaces on one side to allow optimum installation in control cabinet
- 2 CompactFlash drives, both accessible from the outside
- High system availability
- Battery-backed SRAM as memory for WinAC data
- 2 x 7-segment display and 2 signal LEDs (freely programmable)

– Not available

■ **Benefits**

Compact dimensions

The SIMATIC IPC227D is a particularly compact and energy-efficient PC in the Nano format. The heart of the Nanobox PC with particularly many mounting options are high-performance Intel Atom processors of the latest generation.

The SIMATIC IPC427 (Microbox PC) is an ultra-compact and rugged device for DIN rail mounting, portrait or wall mounting, and for use in the machine: mounting depth from 47 mm.

With a maximum mounting depth of 100 mm (80 mm without DVD drive), the SIMATIC IPC627 (Box PC) can be used even in the smallest of spaces. In addition, space-saving portrait mounting is possible with the SIMATIC Box IPC627/IPC827.

Rugged design

All designs aim to achieve maximum safety in the case of vibration and shock loads. For example, a special vibration-absorbing suspension of the hard disk ensures operational reliability, even at very high mechanical loads. A flash drive slot, which is easily accessible from outside, or the solid-state drive (SSD) in the single level cell (SLC) architecture, which is particularly suitable for industrial applications, is available for setting up low-maintenance, fault-tolerant, diskless systems. Thanks to its fan-free design and use of CompactFlash cards, the Microbox PC and the new Nanobox PC are especially suitable for maintenance-free 24-hour continuous operation.

Service-friendly device design

The Box PC can simply be folded out for speedy component replacement. The inside of the device is easily accessible for future expansions.

Integrated interfaces

On Box PCs, all interfaces are located on one side. Box PCs can be interfaced with the control/cell level via onboard Ethernet interfaces and communicate in the field via an integrated PROFIBUS interface, which is available as an option. External monitors or displays can be connected via a VGA or DVI-I interface.

Flexibility

Especially the SIMATIC IPC827 with its 5 free PC slots offers many expansion options. All Box PCs have CE certification for use in industrial applications and domestic/commercial applications and can therefore be used in building automation or public installations in addition to industrial applications.

Continuity

Thanks to motherboards developed and manufactured in-house, the SIMATIC Box PCs offer very high continuity and security of investment. The SIMATIC Box PC models can normally be ordered for a period of three years and spare parts are obtainable for at least 5 years after active marketing is concluded.

2

Overview

SIMATIC IPC227D available for implementing simple control, data collector or communication tasks:

- Maximum compactness with approx. 1 liter enclosure volume or more with integrated industrial power supply for minimum space requirements in the control cabinet
- Maximum flexibility thanks four mounting options and interfaces on one side suitable for every installation situation
- Optimum variety of interfaces due to a large number of integrated interfaces such as a selectable serial port (RS232/RS485/CAN) and 2 x teaming-capable Gigabit LAN
- Maximum industrial functionality due to closed enclosure for optimum dust protection and non-volatile retentive memory
- Further device options for optimum adaptation to the application with additional PCIe slot or RS232 interfaces or digital I/O

Communication products	see Catalog ST 80 / ST PC
For power supplies and uninterruptible power supplies	see Catalog ST 80 / ST PC
RMOS3 real-time operating system	see Catalog ST 80 / ST PC

Note:

Software Packages with SIMATIC WinCC flexible, SIMATIC WinCC and SIMATIC WinAC RTX (F) can be ordered together with the SIMATIC IPC with a price advantage.

You can find more information in Catalog ST 80 / ST PC and in the Industry Mall at www.siemens.com/industrymall

SIMATIC Panel PC

■ Overview

SIMATIC Panel PCs are suitable thanks to their high industrial compatibility both for use in control cabinets, consoles and control panels, as well as directly on the machine. Typical areas of application can be found in both production and process automation.

There is a broad range of robust, high-performance SIMATIC Panel PCs available for different requirements.

Shared industrial functionality

- High-quality components and modules with a high MTBF (mean time between failure), which also ensure 24-hour operation in the extended temperature range.
- High swing/shock capacity of the devices through special hard-disk suspensions, locked connectors and card retainers
- Rugged housing model with high electromagnetic compatibility (EMC) and integrated industrial power supplies (also as per NAMUR)
- Service-friendly device design
- Bright, brilliant displays in different sizes up to 19"
- Same front panel mounting dimensions and uniform front design across all device families
- Rugged fronts protected from dust, humidity and chemical substances (front-side IP65 / NEMA 4 degrees of protection)

SIMATIC HMI IPC277D
for implementing simple visualization and control tasks

- High degree of flexibility for selecting rugged widescreen fronts from 7" to 12" for a more freely configurable display area
- High resolution, large viewing angle, and up to 100% dimmable backlighting for a brilliant display with optimized power consumption
- Absolutely maintenance-free due to the use of CompactFlash and SSD as mass storage and fanless operation up to 50 °C ambient temperature
- Maximum industrial functionality due to non-volatile retentive memory
- Ready-to-use embedded bundles with visualization or/and control software

SIMATIC HMI IPC477C
Ultra-compact and maintenance-free Panel PC in embedded technology

- Compact design
  (only 61 to 69 mm mounting depth for 12" to 19" display)
- No rotating parts (without fan and hard disk)
- High security due to the Microsoft Windows XP Embedded Standard 2009 operating system
- Ready-to-use devices with optionally preinstalled software
  - HMI: Innovative HMI software WinCC flexible
    (incl. archives and recipes)
  - RTX: with real-time capable software PLC WinAC RTX
- Retentive memory on board
  (NV-RAM, usable with WinAC RTX)

SIMATIC HMI IPC577C
Industrial functionality and openness at an attractive price

- Full PC openness and performance boost with Intel Core2 Duo processors
- Rugged design for industrial use
- Can be expanded using a PCI slot and additional interfaces
- More rugged due to SSD (solid-state drive) or CompactFlash
- The configurator (best-fit for the customer) makes ordering more flexible
- Compact design

SIMATIC HMI IPC677C
Maximum performance, flexibility and availability

- Rugged, expandable industrial PC with different front panels
- Rugged design for industrial use
- Complete PC openness
- Optional PROFIBUS or PROFINET onboard
- All CPUs with dual core

SIMATIC Panel PC 677B
Flexibility and compactness with maximum performance

- High performance thanks to latest process technology from Intel
- Dual Core technology: Up to Intel Core2 Duo 2.16 GHz
- Compact structure with simultaneous expandability through PCI/PCIe slots
- Strong communication through two Ethernet and integrated PROFIBUS DP/MPI interfaces
- Control and computer units can be separated by up to 30 m
- RAID1 controller on board
- Retentive memory on board (NV-RAM, usable with WinAC RTX)

Benefits

High degree of industrial capability

The entire construction is designed for purely industrial use. Thus, for example, a special vibration-absorbing suspension of the hard disk ensures operational reliability, even at high mechanical loads. SIMATIC Panel PCs are thus designed for a vibration load of 1 g (Panel PC 577B: 0.25 g) and a shock load of 5 g (Panel PC 577B: 1 g) during operation.

Performance

Thanks to the use of the latest Intel processors from ULV (Ultra Low Voltage) to Intel Core technology, SIMATIC Panel PCs are flexibly scalable for your application.

• Scalable computing power
• Highest computing power
• Latest Intel processor technology
• Dual Core, ULV, Atom

Investment security

High component continuity and guaranteed availability of spare parts for up to 5 years after product phase-out are ensured e.g. through the development and production of our own motherboards. This enables long-lasting machine concepts without renewed engineering effort.

Service-friendly device design

Upgrades and exchange of components are easy thanks to the device design.

Integrated interfaces

The different already-integrated interfaces allow for various communication and expansion options. Many models are already equipped with Gigabit Ethernet and PROFIBUS DP/MPI interface.

Extendibility

Depending on the model, ISA, PCI, PCI Express, PC/104 Plus and PC/104 slots are available for individual expandability. This enables the further use of existing and new expansion cards.

Compact dimensions

Considering the desired expandability, SIMATIC Panel PCs have an extremely low mounting depth and can thus be used in very narrow installation locations.

Options

Various options enable an individual solution for your industrial application. Thus, the operator control unit can be operated separately from the computer unit by up to 30 m. The direct control key module increases the operating safety in that it can be used to run the process independently of the operating system and without delay directly on PROFIBUS DP/MPI.

Individually expandable system availability

• RAID1 configuration –
  high system stability through redundant data management
• SIMATIC IPC DiagMonitor –
  Monitoring of the operating states and early detection of problems locally and in the network
• SIMATIC PC/PG Image & Partition Creator –
  downtime minimization through preventative data backup
• SITOP and Masterguard power supply (UPS) –
  Bridging of voltage dips

SIMATIC HMI IPC277D

■ **Overview**

SIMATIC HMI IPC277D for implementing simple visualization and control tasks

- Offers great flexibility in the selection of rugged widescreen fronts
- From 7" to 12" for more freely configurable display area
- High resolution, large viewing angle, and up to 100% dimmable backlighting for a brilliant display with optimized power consumption
- Absolutely maintenance-free due to the use of CompactFlash and SSD as mass storage and fanless operation up to 50 °C ambient temperature
- Maximum industrial functionality due to non-volatile retentive memory
- Ready-to-use embedded bundles with visualization or/and control software

The following front installation versions are available:

- 7" Touch
- 9" Touch
- 12" Touch
- 15" / 19" available soon
- All fronts as widescreen version

Configuration

SIMATIC HMI IPC277D — **on request**

Interfaces: 2 x Gbit LAN (RJ45),
1 x serial (COM1), 3 x USB

Operating unit
• Touch 7" TFT
• Touch 9" TFT
• Touch 12" TFT
• Touch 15" TFT, front USB interface
• Touch 19" TFT, front USB interface

Processors /
memory configuration / retentivity
• Atom E660 (1.3 GHz), 2 GB RAM
• Atom E660 (1.3 GHz), 2 GB RAM, retentivity
• Atom E640 (1.0 GHz), 1 GB RAM
• Atom E640 (1.0 GHz), 1 GB RAM, retentivity

Drives
• Without drive, with CF slot
• 2 GB SIMATIC IPC Compact-Flash
• 4 GB SIMATIC IPC Compact-Flash
• 8 GB SIMATIC IPC Compact-Flash
• 50 GB solid-state drive SATA (SLC)

Operating system
• Without operating system
• Windows Embedded Standard 2009 preinstalled (CF from 2 GB/SSD)
• XP-Prof. MUI preinstalled on SSD
• Windows Embedded Standard 7 preinstalled (CF from 4 GB/SSD)
• Windows 7 MUI preinstalled on SSD

Software bundles
• Without RTX/HMI software
• RTX: WinAC RTX 2010
• RTX-F: WinAC RTX F 2010
• HMI: WinCC RT Advanced 128 PT
• HMI: WinCC RT Advanced 512 PT
• HMI: WinCC RT Advanced 2048 PT
• HMI: WinCC RT Advanced 4096 PT
• HMI/RTX: RT 128 PT
• HMI/RTX: RT 512 PT
• HMI/RTX: RT 2048 PT
• HMI/RTX: RT 4096 PT

Accessories

Touch pen — **6AV7 672-1JB00-0AA0**

Undetachable pen for operation of the touch devices, mounting of the support on the control cabinet or directly on the PRO unit

Note:

Software Packages with SIMATIC WinCC flexible, SIMATIC WinCC and SIMATIC WinAC RTX (F) can be ordered together with the SIMATIC IPC with a price advantage.

Please note:

The HMI IPC277D with Bundle SW is always supplied with inserted CF card.
The licenses are on the supplied USB flash drive.

You can find more information in Catalog ST 80 / ST PC and in the Industry Mall at www.siemens.com/industrymall

SIMATIC HMI IPC477C

■ Overview

Embedded PC platform with extremely high industrial compatibility for demanding tasks in the field of PC-based automation

- Maintenance-free
  (no rotating components such as fan and hard disk)
- Rugged construction:
  The PC is resistant to even the harshest mechanical stress and is extremely reliable in operation
- Compact design (only 61-69 mm installation depth for 12"-19")
- Battery-backed retentive memory onboard
- High investment protection
- Fast integration capability

The following front versions are available:

- Built-in versions
  - 12" and 15" TFT Touch
  - 12" and 15" TFT Key
  - 19" Touch
- Support arm versions
  - PRO 15" and PRO 19" Touch
  - Fully enclosed device with degree of protection IP65 for
  - mounting on a support arm/stand

■ Overview

Rugged, expandable industry PC for demanding tasks in the area of PC-based automation with various control units (front panels):

- Rugged and compact design for industrial use
- Full PC openness
  - Windows Embedded Standard or Windows XP Professional, or without operating system
  - CF card, HDD, SSD
  - DVD drive
- Expandable using a PCI slot
- Optionally with PROFIBUS or PROFINET (RT/IRT) onboard
- Installation-compatible with Panel PC 577B
  - Touch screen control units with 12", 15" and 19" TFT display
  - 12" and 15" TFT Key
- High degree of investment protection

SIMATIC HMI IPC677C

■ Overview

SIMATIC HMI IPC677C

PC platform with high degree of industrial compatibility for demanding tasks in the area of PC-based automation.

Rugged construction:
The PC is resistant to the harshest mechanical stress and is reliable in operation.

- Compact design
- High degree of investment protection
- Fast integration capability
- Front panel versions:
  - 12", 15" and 19" TFT Touch
  - 12" and 15" TFT Keys
  - 15" TFT Touch INOX with stainless steel front for special requirements, e.g. in the food, beverages and tobacco industries

■ Overview

The Flat Panels are rugged industry-standard LCD monitors.

- Installation:
  - They are equally suited to installation in the machine, in control cabinets, consoles and gantries or in 19" racks.
  - As a device with all-round IP65 protection for mounting on a supporting arm/stand
- Type of operator control:
  - Simple display devices without operator functionality
  - Optional devices with touch control
  - Rear connection of I/O devices (optional)

■ Overview

The SIMATIC HMI SCD 1900 is a rugged, industry-standard PC monitor.

It is used as operator control unit in all types of industrial and standard PC. Standard interfaces permit a wide range of possible applications.

Built-in versions:

• Built-in unit (for control cabinets, control desks, and gantries)
• 19" built-in units (for 19" racks)

Type of operator control:

• Panels with touch control

Industry monitors and Thin Clients

SIMATIC Thin Client

■ Overview

SIMATIC Thin Clients are very economical operator panels which can be used flexibly in various distributed applications. They can be used as (additional) operator stations on a SIMATIC industrial PC or also on a SIMATIC Panel.

The following versions are available:

- The rack-mounting versions SIMATIC Thin Client 10" Touch and SIMATIC Thin Client 15" Touch
- The support arm version SIMATIC Thin Client PRO 15" Touch with a rugged and very compact aluminum enclosure which is completely IP65 protected

The SIMATIC HMI Thin Client Ex is available for hazardous areas. This device differs technically from the devices mentioned above.

■ **Overview**

SIMATIC RF180C/RF182C are communication modules for direct connection of SIMATIC identification systems to PROFINET IO/Ethernet. The readers (SLGs) of the RFID systems MOBY D/U, SIMATIC RF300/RF600 as well as MV400 (RF180C only) can be operated on the SIMATIC RF180C/RF182C.

Due to the high degree of protection and its ruggedness, SIMATIC RF180C/RF182C is ideally suited to use at the machine level. The uniform plug-in connection system ensures rapid commissioning.

■ Overview

The SIMATIC MV420 supplements the portfolio of basic, compact and integrated code readers. The MV420 is particularly suited for close up to mid-range reading distances (ca. 15 mm to 220 mm).

SIMATIC MV420 is an optical code reading system that has been specially designed for detecting and evaluating a variety of machine readable codes in the packaging industry (e.g. F&B, pharmaceuticals and tobacco) and industrial production (e.g. automotive, electronics and solar). The list of readable codes includes all standard matrix codes and bar codes which are reliably detected - mostly independent of the printing technology applied and carrier medium used. One key feature of the unit is its ability to read data matrix codes (DMC). The SIMATIC MV420 device family is flexible, reliable and easy to use.

The MV420 also features integrated optics, which can be adjusted to the required reading distances. The unit also includes integrated high-performance lighting for its size. All of the components are housed in an extremely compact enclosure with a high degree of protection IP67.

Highlights at a glance:

- Compact design with degree of protection IP67
- Integrated optics: variable reading distances
- Integrated high-performance lighting
- Web server technology: parameterizable with regular Web browser
- Interfaces: Ethernet, PROFINET, RS232, DI/DO and direct connection to RFID communication modules (ASM)
- Exceptionally high reading speeds, depending on the model

Further important product characteristics are:

- Excellent read algorithms based on the code reading systems SIMATIC MV440 and VS130-2 and many years of experience in the market.
- No special knowledge required for reliable parameterization of reading features. Parameterization usually only required for hard to read codes. "Setup" is performed automatically by presenting a readable code pattern.
- Autotrigger mode (availability depends on model): Automatically detects when a code is in front of the reader. ensuring that no external trigger signal is required. No proximity switch or cable is required for the trigger. This feature is also useful for applications in which a proximity switch cannot be used, such as for objects that are linked together.
- Multicode (availability depends on model): Reads multiple codes in one step within the same image field.
- ID-Genius (availability depends on model): a high-performance code reading algorithm for difficult DPM data matrix codes.
- Code quality evaluation: displays the key quality parameters of the code to be read.
- Customized user interface can be easily generated with SIMATIC WinCC flexible /WinCC.
- Web-based user interface; can run on a variety of platforms meeting the following requirements: Internet browser (IE 6.0 or higher), JAVA-VM (MS, SUN).
- Password protected user interface with integrated access rights administration.
- Web-based user interface available for easy integration with an HMI device. The browser and JAVA VM requirements previously mentioned also apply in this case.
- 6 language versions are available (operator interface, manual and online help are available in German, English, French, Spanish, Italian, and Chinese).

SIMATIC MV440 with built-in ring lamp and protective barrel D65

SIMATIC MV440 with external ring light and protective barrel D50

The SIMATIC MV440 readers have been specially developed for use in industrial production. The devices offer professional decoding algorithms for machine-readable codes and text recognition in one device for production and logistics. The SIMATIC MV440 device family is characterized by flexibility, reliability and ease of use.

The list of readable codes includes all common matrix and barcodes which, regardless of the printing technology and the carrier medium used, are recognized reliably. A special feature of the device is its ability to read Data Matrix Code (DMC), which is frequently used especially in production for direct part marking (DPM) and places the highest requirements on the readers.

The operating range of the devices reaches from close range 7 cm to distant range 300 cm. Due to the freely selectable lenses and lighting, the working range as well as implementation in applications with special requirements is almost unrestricted. Integration in industrial automation environments is via standardized fieldbus technology such as PROFINET (onboard M12, PoE or via ASM module) or PROFIBUS (via ASM module, M12), but open interfaces are also supported.

M200D motor starters for PROFINET

2

■ Overview

The intelligent, highly flexible M200D
PROFIBUS / PROFINET motor starters are the most functional
motor starters of the SIRIUS motor starter family in the high
degree of protection IP65 for PROFIBUS / PROFINET communi-
cation.

They start and protect motors and loads up to 5.5 kW.
Direct-on-line and reversing starter versions are available in a
mechanical version and also an electronic version (the latter
with soft start function).

The particularly robust M200D PROFIBUS / PROFINET motor
starters are characterized by numerous functions which can be
flexibly parameterized. Their modular design comprises a motor
starter module and a communication module.

The M200D PROFINET motor starters enable TIA-integrated
parameterization through PROFINET from STEP 7 – in familiar,
user-friendly manner with the same look-and-feel as PROFIBUS.

Functionality

- For basic functionality see Chapter 6 "AS-Interface" -->
  "Motorstarter M200D" --> "General data" --> "Overview"

- Electronic version also with soft start function

- Robust and widely used M12 connection method for the
  digital inputs and outputs and the PROFIBUS/PROFINET bus
  connection

- All four digital inputs and two digital outputs exist in the cyclic
  process image. This provides complete transparency of the
  process on the control level

- Full TIA integration: All digital inputs and outputs exist in
  the cyclic process image and are visible through the bus,
  providing maximum flexibility and excellent adaptability to the
  application.

- Flexible assignment of the digital inputs and outputs with all
  available assignable input actions

- Extensive diagnostics concept using LEDs and through the
  bus with the TIA-compatible mechanisms

- Expanded diagnostics using data records

- Complete plant monitoring using statistics data record and
  current value monitoring by means of data records

- Parameterization through PROFIBUS / PROFINET bus with the
  aid of data records from the user program

- Control of the motor starter using a command data record from
  the user program

- Removable modular control unit – quicker device replacement
  and therefore lower costs when device outages occur – since
  existing wiring is on the control unit and only one device needs
  to be replaced

- Parameterization in Step 7 HW config using Motor Starter ES
  (ordering option for start-up software)

- Start-up and diagnostics with the aid of Motor Starter ES
  (ordering option for start-up software)

- Trace function through Motor Starter ES for optimized start-up
  and tracking of process and device values

Only with PROFINET:

- Just one bus system from the MES level to the devices –
  no routers

- More stations on the bus and possible configuration of flexible
  bus structures

- Automatic re-parameterization in case of device replacement
  thanks to proximity detection

- Wireless integration of plant segments in difficult environ-
  ments using WLAN

- Easier expansion of the system thanks to a higher number of
  stations on the bus and elimination of terminating resistors

M200D motor starter modules for PROFIBUS / PROFINET
(without communication module)

M200D communication modules for PROFINET

Mounting and installation

The M200D PROFINET / PROFINET motor starter comprises a
communication module and a motor starter module. Therefore
only the motor starter module has to be replaced when replacing
devices. This saves time and money. The communication
module remains as an active station on the bus and all other
system components continue running. This prevents downtime.

The integrated plug-in technology significantly reduces the
wiring outlay: Connecting cables can be plugged directly onto
the motor starter module. The PROFINET bus is connected
cost-effectively using an M12 connection on the device.
All versions have identical enclosure dimensions for easier
system design and conversion.

PROFINET/Industrial Ethernet
Motor starters for operation in the field, high degree of protection

M200D motor starters for PROFINET

Overview (continued)

Parameterization and configuration

All motor protection functions, limit values and reactions can be defined by parameterization.

The user has several user-friendly options for parameterization. In addition to parameterization directly from STEP 7, which also permits automatic re-parameterization in case of device re-placement, it is possible to use the user-friendly Motor Starter ES start-up software. By connecting a programming device directly to PROFIBUS / PROFINET and the Motor Starter ES start-up software, the devices can also be conveniently programmed from a central point through the bus. Parameters can also be changed during operation from the user program using the data record mechanism so that the function of the motor starter is adapted to the process when required. With the aid of a PC and the Motor Starter ES software, it is also possible to perform the parameter-ization through the local point-to-point interface on site.

Functions can be flexibly assigned to the digital inputs and outputs, adapting them to all possible conveyor applications. All digital inputs and outputs exist in the cyclic process image. All limit values for monitoring functions and their reactions are parameterizable and therefore adaptable to the application. It is designed to be compatible with other SIRIUS M200D motor starter products and the frequency converter and the ET 200pro peripheral system.

Only with the M200D PROFINET motor starter

Thanks to the integrated proximity detection, the device name does not need to be issued manually when a device is replaced. The name is issued automatically by the neighboring devices which note the "names" of the devices in their proximity. There-fore, no additional start-up measures are required when replac-ing a device.

The new motor starter generation is characterized by high func-tionality, maximum flexibility and the highest level of automation. The PROFINET is recommended in particular for expansive and highly automated system components because the possibility of monitoring devices and systems with data records (statistical data, measured values and device diagnostics) guarantees an in-depth view of the plant from the control room and therefore increases plant availability.

Operation

The motor starters record the actual current flow. Evaluating the current of the parameterizable solid-state overload protection increases the availability of the drives, as do reliable signals con-cerning the overshooting or undershooting of setpoint values.

Diagnostics and maintenance

Diagnostics is provided through numerous mechanisms – and can be used as the customer prefers.

The motor starter is TIA-diagnostics compatible, which means that when a fault is identified, a diagnostics alarm is distributed, which in a SIMATIC controller invokes the diagnostics-OB. The fault can be evaluated as usual in the user program.

The M200D motor starter offers a large variety of diagnostics data through data records. Its functionality is without equal on the market. There are extensive options for reading out data from the motor starter for monitoring devices, systems or processes.

The motor starter is equipped internally with 3 logbooks for device faults, motor starter trips and events, which are issued with a time stamp. These logbooks can be read out of the motor starter at any time in the form of data records and provide the plant operator with plenty of information about the state of his plant and process which he can use to carry out improvements.

With the slave pointer and statistical data functions it is possible to read out, for example, the maximum internal current values or the number of motor starter connection operations for plant monitoring purposes. This enables process deviations to be monitored or commissioning to be optimized. The user can draw conclusions about the actual load conditions of the devices in his process and on this basis can optimize his plant mainte-nance intervals.

The device diagnostics data record contains details of all the states of the motor starter, the device configuration and the com-munication as a basis for central device and plant monitoring.

The installation and maintenance functions (I&M) are used to store information (I&M) on the modules used in the motor starter as well as data (I&M), which can be specified by the user during configuration, such as location designations. I&M functions serve for troubleshooting faults and localizing changes in hard-ware at a plant or checking the system configuration. Reordering a device is particularly easy as a result.

The integrated maintenance timer can be used to implement preventative maintenance and avoid plant downtimes through look-ahead servicing.

Another new feature is the integrated TRACE function with the Motor Starter ES software. It can be used to record measured values as a function of time following a trigger event. This enables process flows to be recorded and their timing optimized.

Local control of a drive is possible using the ordering option with integrated manual operation. This is yet another new develop-ment which distinguishes the M200D PROFIBUS / PROFINET motor starter from the rest of the market and adds innovative technology, maximum availability and transparency to the system.

■ **Overview** (continued)

M200D PROFINET motor starters with PROFIenergy

Increasing energy prices, far-reaching ecological problems worldwide and the threat of climate change make it necessary for you to be more conscious about your use of energy.

Active and effective energy management is possible with PROFIenergy.

PROFIenergy is a manufacturer-independent profile on PROFINET, which can be used by all manufacturers, has been standardized by PNO[1] and supports the switching off of electrical devices during dead time and the measurement of energy flow.

[1] In the PNO (PROFIBUS Nutzerorganisation e. V. – PROFIBUS User Organization), manufacturers and users have come together to agree on the standardized communication technologies PROFIBUS and PROFINET.

Switching off during dead times

PROFIenergy supports the targeted switching-off of loads during dead time.

These can be planned short breaks of a few minutes (such as lunch breaks), longer periods of dead time (such as nights) or unplanned dead time. Energy is always saved when no power is required.

Measuring and visualizing the energy flow
as a basis of energy management

The objective of energy management is to optimize the use of energy in a company – from the purchasing of energy through to the consumption of energy – economically and ecologically.

Analyses of energy consumption over time can be used to control energy flows, avoid energy peaks, improve ratings and thus save costs.

PROFIenergy enables consumption data to be read off from the devices in a unified form. This is recorded during operation and can be displayed on a control panel, for example, or on overlying energy management software packages. This ensures that the measured variables are in a uniform manufacturer-independent form and structure that is available to the user for further processing. These PROFIenergy functions thus provide the basis for active load and energy management during operation.

PROFIenergy in the M200D PROFINET motor starter

The M200D PROFINET motor starter supports "switching during dead time" and "current measurement values" of the motor current using PROFIenergy. These are called commands, because they trigger a reaction in the M200D motor starter.

PROFINET/Industrial Ethernet
Motor starters for operation in the field, high degree of protection

M200D motor starters for PROFINET communication modules, motor starter modules

■ Benefits

M200D PROFINET motor starters with PROFIenergy

Both standards and laws are making environmental protection and energy management increasingly important, as is the desire to cut energy costs in production facilities and thus ensure a sustainable competitive advantage.

It is thus an objective within industry to save energy and actively reduce CO_2 emissions. By the careful use of valuable resources, the manufacturer-independent PROFIenergy profile on PROFINET can make an active contribution to environmental protection.

■ Application

M200D PROFIBUS / PROFINET motor starters are particularly suitable for fully TIA-integrated, highly automated conveyor applications which meet all needs with regard to the monitoring of devices and systems and preventative maintenance.

Adaptability of the motor starter functions and maximum flexibility of the device enable a broad range of application without any limits. The PROFINET-specific expansions are the best assurance of a future-proof investment.

PROFINET/Industrial Ethernet

Software and tools

BANYnet bus analysis and diagnostics

■ Overview

BANYnet is a tool based on Microsoft Windows for documentation, monitoring, diagnostics, recording and analysis of Ethernet and PROFIBUS networks.

- Management of all IP and MAC addresses in the network
- Generation of a network overview map
- Automatic scanning of network
- Monitoring of network nodes for "Failure", "Newly added", "Not registered"
- Reading out of data, message frame types and error statistics from the network components
- Display of bus load
- Recording of message frame traffic
- Recording of PROFINET communication
- Recording of PROFIBUS communication
- Comprehensive trigger, filter and sorting functions

BANYnet plant configuration

■ Benefits

- Continuously updated overview of the configured network (number/type of components)
- Permanent bus load display ensures sufficient performance in the network
- Fast localization of errors in network components
- Network optimization through statistics on type and length of message frame, cycle time, etc.

■ Application

The functionality for this is distributed as follows between five independent program modules:

- The Plant Manager of BANYnet Ethernet offers valuable support toward configuration of your plant through management of IP and MAC addresses, automatic generation of the plant display, and import and export functions.
- The Observer scans the network using various protocols, and displays safety-related changes in the network topology both in an overview and in a hierarchy.
- The Plant Diagnostics reads the configuration data as well as comprehensive message frame type and error statistics from the SNMP-capable network components, and provides information to assist searching for errors in the Ethernet network. Data such as bus load or lifelist are evaluated and displayed online.
- The Bus Analysis records the message frame traffic on one or more Ethernet buses synchronously, and interprets the message frames throughout all levels, including SIMATIC S7/PCS 7 and PROFINET. Comprehensive trigger, filter and sorting functions allow fast localization of errors.
- The Profibus Scope records the message frame traffic of a PROFIBUS network using a CP 5512, and interprets the message frames accordingly. Comprehensive trigger, filter and sorting functions allow fast localization of errors.

■ Function

The **Plant Manager** is used to configure the database of the BANYnet project. All information required is created in data structures. An import/export function allows data exchange with other programs. A user-friendly plant overview is automatically generated from the data structures. The Plant Manager can therefore be used for both documentation and configuration of Ethernet networks. Tables provide detailed information on the properties of the nodes. Furthermore, any type of information can be assigned to the individual nodes for documentation purposes.

The **Plant Diagnostics** scans the system data of SNMP-capable network nodes (e.g. switches, PCs), and thus provides information on the configured nodes. The bus load display of the individual ports (numeric or graphic) and the list of nodes provide great assistance in locating errors in the Ethernet network.

Statistics functions provide information on the number of individual message frame types (packet lengths, message frame types, error types, etc.). The events (traps) sent by the switch can be displayed in a list.

Parameterization of the SCALANCE X and OSM/ESM Industrial Ethernet switches is supported in addition, e.g. IP address, port configuration or firmware update.

BANYnet bus analysis and diagnostics

Function (continued)

The **Bus Analysis** allows user-friendly analysis of recorded files (import/export of Netmon or Sniffer files is also possible) over several interfaces simultaneously (e.g. for redundancy analyses) by means of the integral BANYmon. Errors can be rapidly located using predefined or user-generated filter and sorting functions. When one of the listed message frames is clicked, the associated detailed information is output. SIMATIC S5/S7/PCS 7-specific message frames are interpreted and displayed according to their type (e.g. redundant message frames, alarm-8 message frames, etc.).

When using a CP 1616, PROFINET data traffic can be recorded without time losses and with complete message frame interpretation.

The **Observer** permits user-friendly and reliable dynamic monitoring of your network. The actual state is compared with the project created in the Plant Manager, and changes are displayed immediately. In order to locate events such as errors or the penetration of unknown nodes, it is possible to graphically trace the network hierarchy back to the source. In addition, these events are saved in log files for later analysis and documentation.

Furthermore, the scanned data can be imported into the project and updated supplementary to the Plant Manager.

The **PROFIBUS Scope** permits recording, saving and user-friendly analysis of bus events. It supports all baud rates from 9.6 kbit/s to 12 Mbit/s, and determines these automatically. The recording can be carried out in a linear buffer or a cyclic buffer of selectable size. Long-term recording is possible in this manner. The start and end of recording can be automated using triggers. The data quantities can be reduced during the recording using predefined or user-created filter and sorting functions, and errors can be easily located by means of the subsequent analysis. When a listed message frame is clicked, its detailed information is output. The SIMATIC S7/PCS 7-specific message frames are interpreted and displayed depending on their type (e.g. redundant message frames, alarm-8 message frames, etc.). The following protocols are interpreted: DP, FDL, DPV1, DPV2, FMS and S7.

The BANYnet function for executing several recordings in parallel can be used for the **redundancy analysis**. BANYnet PROFIBUS is connected to the redundant bus segments for this purpose. Since the recorded message frames are assigned synchronous time stamps, the communication flow information can be easily compared. This allows fast and exact locating of redundancy problems.

Note:

The computer with the BANYnet PROFIBUS program package requires a CP 5512 (PC card) for the PROFIBUS connection.

PCI Card (32 bit; 3.3/5 V universal keyed) with ASIC ERTEC 400 for connecting PCs to PROFINET IO with 4-Port-Real-Time-Switch (RJ45); incl. IO Base Software for PROFINET IO Controller and NCM PC; single license for one installation, runtime software, software and electronic manual on CD-ROM, Class A, for 32-bit Windows XP Professional and Windows 7; other operating systems via Development Kit DK-16xx PN IO; German/English	

More information

Support can be found at:
www.siemens.com/simatic-net/ik-info

■ **Function**

All the functions of the BANY PN IO are controlled by the "BANYscope" program that ships with the product. This Windows application is connected to the BANYsys module via an Ethernet connection. This is possible via a direct connection, via a network or via a VPN tunnel.

The four analysis ports can be used by all function modules but not at the same time. They need to be enabled and assigned to the module being used.

On completion of the parameter assignment and after starting the relevant analysis function, the connection between BANY PN IO and "BANYScope" can be terminated, in other words, the module then works alone.

The **frame recording** provides a comfortable option of recording communication on Ethernet connections at speeds from Fast Ethernet to gigabit Ethernet.
The design of BANY PN IO completely in FPGA technology allows error-free recording of all data with time stamping of 10 ns. Even bad frames are not automatically discarded but can be saved and evaluated.
The four recording ports can be used independently for recording. If a "Test Access Point" (TAP) is used to monitor the frames instead of a hub or a switch mirror port, it is possible to interconnect ports; in other words, to bundle their data streams and to save and evaluate them together.
To allow the recording to be controlled effectively, freely programmable filters and triggers are available. Apart from the standard filters and functions such as addresses, protocols and patterns, there are also special functions that can trigger on frame timeouts and bad frames (CRC error, undersize error etc.). The integrated hardware inputs can also be used to fire triggers using external binary signals.
The data is saved in the internal RAM (2 GB capacity) that can also be set as a ring buffer. At the end of the recording, the data is loaded and saved either on the PC via the Ethernet host connection or on an external storage medium connected via USB.
If it is necessary to record larger volumes of data, the data can also be streamed to the PC during the recording and saved there.
All frames are saved in a file in "pcap" format that can, for example, be read by Wireshark.

PROFINET analysis automatically detects all important parameters of a PROFINET system. BANY PN IO analyzes the frame traffic in real time in terms of frame type, cycle times and many other important characteristics of the network.
During the analysis, all PROFINET nodes are listed in table.
The following information is displayed and updated cyclically for each node:
PROFINET class, number of sent/received packets, desired cycle time, min/max cycle time, min/max cycle time deviation.

The number of frames sent by each node per time unit can be visualized in a cycle time diagram. These are displayed graphically in a distribution curve. At a glance, it is possible to see how well the PROFINET component keeps to the cycle.

During the analysis of PROFINET IRT, not only the degree to which individual components adhere to the cycle is important, but also the offset of the time of sending within the cycle; in other words, its behavior in conjunction with the other communications partners in the network. The offset diagram can display the distribution curves of all nodes in the cycle to allow a statement to be made regarding the quality within the entire network and the time slice distribution of its nodes.

Based on intuitively structured filter menus, the **online value tracking** provides a simple and uncomplicated means of extracting data from the frame traffic. In contrast to the frame recording, complete frames are not saved here but rather individual values of the relevant communications partners transferred via PROFINET.
This means, for example, that the setpoint of a controller, the speed of a motor etc. can be read directly from PROFINET and saved with a time stamp (resolution 10 ns). This is displayed in a table or graphically in the form of a curve that represents the values over time online and in real time.

To be able to select the values, the address of the node, the byte position of the value within the frame and the number of bytes to be read must be specified in the filter. The size of the values is limited to 8 bytes. All available formats can be interpreted (binary, integer, analog, ...).
Up to four values can be recorded simultaneously. There is no limit to the recording time.

PROFINET/Industrial Ethernet
Software and tools

BANY PN IO

■ Function (continued)

The **packet generator** allows any Ethernet frames to be injected into the network. To allow this, all four analysis ports are available and are independent of each other. As an alternative, the ports can also be coupled together in pairs as sender/receiver to be able to read in sent frames and to verify the read frames with the sent frames.

The frames to be sent are transferred to the module as input in the form of "pcap" files. These inputs can either be generated by recording or can be created as new frames using the integrated pcap editor.

Each port has its own menu for setting the relevant send options. Among other things, the packets can be sent as follows:

- Cyclically (with breaks)
- As a fixed percentage of bus load
- With a specified number of repetitions
- For a specified time etc.

At the end of the action, all important parameters (bus load, duration etc.) are output as statistics.

All the modules listed above can also be remotely controlled by a **script**. To allow this, each action taken by the user is logged in the integrated script window. The log can be saved, edited and transferred later to BANYscope when this is called. All the instructions in the script are then executed. This allows automated test sequences, for example for setting up test automats. The manual contains an overview of all the script commands that can be used.

As an alternative, the script commands can also be transferred using a remote interface (via TCP/IP) by another application to BANYscope. When TCP is used as the transfer interface, the application does not need to be located on the same computer as BANYscope, only in the same network. A sample program in C# ships with the product.

2

■ Overview

SINEMA Server is a web-based network monitoring software that significantly reduces the response time to communications problems in industrial networks, and thus avoids downtimes and saves costs.

- Simple operator input even for plant operators or service personnel, to enable autonomous detection and correction of communications problems

- Graphical representation of industrial network structures (automatic topology detection)

- Standardized network documentation (reports for SLAs, i.e. **S**ervice **L**evel **A**greements)

- Simple operation via web browser or via an HMI/SCADA application, without special IT knowledge

- Automatic saving of network data such as network topology and device information

- Low installation and maintenance costs, especially thanks to the use of pre-installed industrial PCs (SIMATIC IPC427C Microbox PC)

■ Benefits

g **e**get **Designed for Industry**

- Simple error detection and location thanks to clear graphical and tabular display (e.g. color-coded representation of cables and devices in a network topology)

- Reaction-free integration into existing industrial networks and connection to existing HMI-SCADA systems with the help of OPC and Web technology

- Shortening of signaling channels and avoidance of standstills by means of automatic alarm forwarding, e.g. per e-mail to an administrator or per OPC to an HMI/SCADA system.

- Traceability of changes in the network (devices and connections) and verification of availability by means of network report

- Lower procurement costs and no costly training and maintenance license costs in comparison to IT network management systems

- High degree of flexibility for the topology display through automatic identification and customizable display

■ Application

Application examples

With SINEMA Server, the benefits of a network diagnostics solution, long-familiar in the IT environment, can now also be used for industry and its HMI/SCADA systems (e.g. in WinCC and PCS 7).

Network information prepared by SINEMA Server can be called up by any clients via a Web browser or OPC interface.

The software is suitable for applications with 20 to max. 250 devices per SINEMA Server station, identifiable via IP address:

- Network monitoring in factory and process automation networks, e.g.
  - Robot cells
  - Bottling machines and packaging machines
  - Pharmaceutical and chemical plants

- Network monitoring in industry-related applications, e.g.
  - Logistics processes
  - Power generation and distribution
  - Infrastructure projects

Clients call up the network information prepared by SINEMA Server

PROFINET/Industrial Ethernet
Software and tools

SINEMA server

■ **Design**

Product versions

The number of Ethernet devices to be monitored must be taken into account when selecting the software license. Each device that can be identified via the IP address, e.g. a SCALANCE X Industrial Ethernet switch, is assigned an IP address regardless of the number of ports.

Different product licenses are available depending on the number of supported network devices:

SINEMA SERVER Basic 50

• Supports the diagnosis of up to 50 IP devices

SINEMA SERVER Basic 100

• Supports the diagnosis of up to 100 IP devices

SINEMA SERVER Basic 250

• Supports the diagnosis of up to 250 IP devices

■ **Function**

Automatic detection and monitoring of network stations

SINEMA Server is especially suitable for operating and maintenance personnel in process and production plants who are responsible for round-the-clock uninterrupted operation of the automation systems and networks.

All the collected network data can be displayed via a Web-based interface on every PC in the network with the help of a browser (Microsoft Internet Explorer or Mozilla Firefox).
No other software need be installed to display the network data.

SINEMA Server continuously represents the device status and connection status from the network graphically in different colors, and indicates difficulties before they become problems. In this way, operators can see immediately if a device has failed or a connection is overloaded.

Looming failures of network components indicated by an increase in the number of error message frames are also detected and displayed graphically.

Additional information about the network stations, the connection, or an event can also be displayed.

Standardized diagnostics of Ethernet, PROFINET and IWLAN devices

SINEMA Server uses standardized Ethernet protocols such as ICMP (**I**nternet **C**ontrol **M**essage **P**rotocol), DCP (**D**iscovery and **C**onfiguration **P**rotocol) and SNMP (**S**imple **N**etwork **M**anagement **P**rotocol) for detecting and diagnosing network devices.

Network stations and their connections are automatically detected and continuously monitored by entering the IP scan ranges and the SNMP passwords.

As delivered, essential vendor-neutral and standardized data (type, status and number of interfaces and connections from SNMP-MIBs) is detected, as well as other information specific to Siemens devices, such as the status of the redundancy manager in the case of SCALANCE X and wireless signal information in the case of SCALANCE W.

The device information is read out automatically at pre-defined intervals and saved in a database.

The current data can be clearly sorted and displayed at any time in list form and as a property dialog for each device.

Fault detection in the network

• Failure of devices and interfaces/ports
• Faults and failure of ring redundancy
• Malfunctioning of devices and interfaces/ports
• Overload of devices and interfaces/ports
• Loss of IP addresses
• Discovering new, unknown devices
• Discovery of new and modified interfaces/port connections (topology)
• Sporadic communication failures
• Duplicate IP addresses

Reporting and analysis of network events

SINEMA Server receives and generates network alarms and saves these with a time stamp in a message database. These messages are displayed in a table and contain all the important information about events on the network, such as the failure of devices and/or connections.

Filtering and sorting functions allow fast analysis of the data according to specific criteria such as source, priority, number of repetitions, and time stamp.

Alarm messages can be forwarded quickly and automatically by e-mail to those responsible (e.g. production and maintenance personnel) or via OPC to an HMI/SCADA system.

PROFINET/Industrial Ethernet
PROFINET Technology components

Enhanced Real-Time Ethernet Controller ERTEC

2

Overview

With the Industrial Ethernet ASICs of the ERTEC family (**E**nhanced **R**eal-**T**ime **E**thernet **C**ontroller), devices and systems can be connected to PROFINET without great effort. The high-performance Ethernet controllers with 32-bit microprocessor as well as integral real-time switch for Real Time Ethernet have been specially developed for industrial use.

These Ethernet controllers handle all the data transmission for PROFINET IO in real time (RT) and isochronous real time (IRT) and thus offload the application processor. Thanks to the integral 2-port switch (ERTEC 200) or 4-port switch (ERTEC 400), there are no costs for external switches. Flexible topologies such as star, tree and linear topologies can be implemented without any other external network components.

- ERTEC 200
  with an integral 2-port switch for developing simple or modular PROFINET field devices. It also contains integral PHYs for linking the Ethernet controllers to the physical communication network.
- ERTEC 400
  with 4 integral ports and one integral PCI interface for developing controllers and network components.

The DK-ERTEC 200 PN IO and DK-ERTEC 400 PN IO Development Kits enable the uncomplicated development of PROFINET field devices thanks to fast and simple integration of the PROFINET IO functionalities based on the ERTEC. The ERTEC 200 PN IO Starter Kit is especially suitable for low-cost introduction to PROFINET field device development.

Overview

With the help of the development kits for the Enhanced Real-Time Ethernet Controller ERTEC, compact or modular PROFINET IO field devices can be developed in a short time and without great effort.

The DK-ERTEC 200 PN IO and DK-ERTEC 400 PN IO development kits enable comprehensive implementation of the PROFINET IO functionality. The low-cost starter kit is suitable as an introduction to PROFINET technology and can later be upgraded to a full DK-ERTEC 200 PN IO.

New: Since Version 3.2, the innovative functions Shared Device, MRP and PROFIenergy have been included in the development packages and can be integrated into PROFINET IO field devices at no additional expense.

PROFINET/Industrial Ethernet
PROFINET Technology components

Development kit
for Standard Ethernet Controllers

2

■ Overview

With the help of the development kit for Standard Ethernet Controllers, PROFINET IO Devices can be developed on the basis of a Standard Ethernet Controller.

■ Benefits

- Easy development of PROFINET field devices with real-time communication (RT)
- Optimally interacting software components for developing PROFINET field devices.
- With the help of detailed instructions, this provides a simple introduction to PROFINET IO technology for device manufacturers.
- Easy creation of a specific GSD file thanks to the supplied example GSD file.
- Shorter development times due to a "ready-to-use" application example and a system modification for an ARM9-based controller manufactured by Digi.
- Easy porting to other 32-bit microcontrollers and other 32 bit real-time operating systems through the consistent use of hardware interfaces and operating system abstraction interfaces.

■ Application

The development kit for Standard Ethernet Controllers enables the development of a PROFINET field device on the basis of a Standard Ethernet Controller. To enable its use to be as platform-independent as possible, the PROFINET IO stack supplied in the source code has been optimized for simple porting. This development kit offers everything required for developing PROFINET field devices with real time (RT).

■ Design

The CD of the development kit for standard Ethernet controllers contains the following components:

- PROFINET IO device stack in source code
- Application example based on an ARM9 controller manufactured by Digi
- Documentation material in English and German
- GSD file
- Software example for PROFINET IO controller test partner (test partner is not included in the scope of supply of the hardware)

Licensing

The development kit for Standard Ethernet Controllers contains a development license that authorizes the user to develop and test PROFINET IO Devices on the basis of the PROFINET IO device stack included in the scope of delivery.
For the production of series devices, one product line license must also be obtained for each product line under the Order No. 6ES7 195-3BC10-0YA0.

For further details of the currently applicable licensing rules, contact our Competence Center ComDeC and PIC.

Support

The competent and experienced staff at the PROFINET Competence Centers in Europe and the U.S. offer free telephone advice as well as individual and agreed development and support on-site – from the initial information all the way to conclusion of the development with certification.

■ Overview

PN	DP-M	DP-S	ASi-M		
●	●				

- Compact router between Industrial Ethernet and PROFIBUS
- Connection to Industrial Ethernet with 10/100 Mbit/s full/half duplex connection with autosensing for automatic switchover
- Connection to PROFIBUS with 9.6 kbit/s to 12 Mbit/s incl. 45.45 kbit/s for PROFIBUS PA
- PROFINET IO proxy; connection of PROFIBUS DP slaves to PROFINET IO controller according to PROFINET standard:
  - From the viewpoint of the IO controller, all DP slaves are handled like I/O devices with Ethernet interface, i.e. the IE/PB Link PN IO is their proxy.
- Cross-network programming device/operator panel communication by S7 routing, i.e. all S7 stations can be remotely programmed by the programming device on the Industrial Ethernet or PROFIBUS.
- Cross-network access to data of S7 stations for visualization by means of S7 OPC server and S7 routing;
  - Via the IE/PB Link PN IO access can be made from the PC on the Industrial Ethernet (e.g. for HMI applications with OPC Client interface) by means of S7 OPC server, to all data of the S7 stations on the PROFIBUS.
- Module replacement without the need for a programming device, using the C-PLUG swap media for backing up the configuration data

■ Benefits

g e**get** Designed for Industry

PROFINET applications

- Protection of investment due to simple connection of PROFIBUS DP slaves to PROFINET IO controller
- Enables the use also in plants with PROFIsafe applications
- Independence from individual vendors through support of the PROFINET standard for distributed field devices

Configuration example of PROFIBUS and PROFINET
PROFIBUS devices can be seamlessly integrated into PROFINET over the IE/PB Link PN IO as proxy.

IE/PB Link PN IO

■ Benefits (continued)

Applications in the case of vertical integration

- Worldwide access to data of the PROFIBUS stations via Industrial Ethernet and Internet for vertical integration
- Optimization of a plant from a central location
- Access to process data from all enterprise levels
- Loading of STEP 7 programs from a central location

Configuration example of IE/PB Link PN IO as network transition from Industrial Ethernet to PROFIBUS for vertical integration

2

Application

As an autonomous component, the IE/PB Link PN IO provides a seamless transition between Industrial Ethernet and PROFIBUS.

Using the IE/PB Link PN IO as a proxy, you can continue to use existing PROFIBUS devices (also with PROFIsafe functionality, V2.0 or higher) and integrate them into a PROFINET application.

The IE/PB Link PN IO also offers the following functions:

- S7 routing
  - permits cross-network PG/OP communication, in other words, all S7 stations on Industrial Ethernet or PROFIBUS can be programmed remotely using the programming device
  - Access can be made to visualization data of the S7 stations on the PROFIBUS from HMI stations on the Industrial Ethernet.
- Data record routing (PROFIBUS DP)
  - It is possible, for example, to use SIMATIC PDM (on the PC) on Industrial Ethernet to parameterize and diagnose a PROFIBUS field device via the IE/PB Link PN IO.

Design

The IE/PB Link PN IO exhibits all the advantages of the SIMATIC design:

- Compact design;
  the rugged plastic casing features on the front:
  - one RJ45 port for connection to Industrial Ethernet.
  - one 9-pin Sub-D socket for connection to PROFIBUS
  - one 2-pin terminal strip for connecting the external supply voltage of 24 V DC.
  - Diagnostic LEDs
- Connection is by means of the IE FC RJ45 Plug 180 with 180° cable exit or by means of a standard patch cable
- Simple mounting;
  the IE/PB Link PN IO is mounted on an S7-300 DIN rail.
- Can be operated without a fan
- Fast device replacement in the event of a fault by using the optional C-PLUG swap medium (not included in scope of supply)

Function

PROFINET

- PROFINET IO proxy;
  connection of PROFIBUS DP slaves to PROFINET IO controller with real-time property, according to PROFINET standard

Additional functionality for vertical integration

- S7 routing
  - permits cross-network PG communication, in other words, all S7 stations on Industrial Ethernet or PROFIBUS can be programmed remotely using the programming device.
  - Access can be made to visualization data of S7 stations on the PROFIBUS from HMI stations on the Industrial Ethernet.
- Data record routing (PROFIBUS DP)
  - Using this option, the IE/PB Link PN IO can be used as a router for data records that are forwarded to field devices (DP slaves). SIMATIC PDM (Process Device Manager) is a tool that creates data sets of this type for parameterizing and diagnosing field devices.
    Application:
    It is possible, for example, to use SIMATIC PDM (on the PC) on Industrial Ethernet to set parameters and run diagnostics for PROFIBUS PA field device over the IE/PB Link PN IO and DP/PA coupler.

The additional functions for vertical integration can also be used in an existing PROFIBUS application without PROFINET for connection to a higher-level Industrial Ethernet.

In this case, the IE/PB Link PN IO is used as an additional DP-Master Class 2 on a PROFIBUS segment for linking to the Industrial Ethernet and offers the above functions.

Diagnosis

Extensive diagnostic options are available via STEP 7 or SNMP, including:

- Diagnosis of the assigned PROFIBUS field devices; using the IE/PB Link PN IO as a proxy, the connected DP slaves can be diagnosed in the same manner as PROFINET IO devices (even in the user program of the PROFINET IO controller)
- General diagnostics and statistics functions
- Connection diagnostics
- Diagnostic buffer
- Integration into network management systems through the support of SNMP V1 MIB-II

Configuration

STEP 7 V5.4 or higher or the TIA Portal V11.0 is required for configuring the full functional scope of the IE/PB Link PN IO.

For the IE/PB Link PN IO, STEP 7 automatically generates the necessary parameters, e.g. the ones that assign addresses, and all necessary routing information.

The configuration data for PROFINET IO created with STEP 7 is saved on the IO controller. Attention must however be paid to the memory capacity. The initialization data for the Ethernet interface is backed up on the C-PLUG (Configuration Plug) swap media. The IE/PB Link PN IO can be swapped in the event of failure without a programming device, because the relevant user and configuration data is saved on the IO controller or on the C-PLUG.

Technical specifications

Product type designation	IE/PB Link PN IO
Data transmission rates	
• Industrial Ethernet	10/100 Mbit/s autosensing
• PROFIBUS	9.6 kbit/s to 12 Mbit/s incl. 45.45 kbit/s (PROFIBUS PA)
Interfaces	
• Connection to Industrial Ethernet	
- 10BaseT/100BaseT	RJ45
• Connection to PROFIBUS	9-pin Sub-D socket
• Connection for power supply	2-pin terminal block
Voltage supply	24 V DC (+/-5 %)
Current consumption (at rated voltage)	
• external from 24 V DC, max.	600 mA
Power loss	approx. 10 W
Perm. ambient conditions	
• Operating temperature	0 °C … +60 °C
• Transport/storage temperature	- 40 °C … +70 °C
• Relative humidity, max.	95 % at +25 °C
Design	
• Module format	S7-300 construction
• Dimensions (W x H x D) in mm	80 x 125 x 120
• Weight	approx. 600 g
Degree of protection	IP20
Configuration	
Configuration software for PROFINET and additional functions	STEP 7/NCM S7, V5.3 SP1 or higher

Performance data

PROFINET communication

PROFINET IO performance data	
• Number of DP slaves on the IE/PB Link PN IO (PROFINET IO-Devices for PROFINET IO)	64
• Number of DP inputs, max.	2048 byte
• Number of DP outputs, max.	2048 byte
Additional functionality	
• Number of S7 connections	max. 32
• Number of DSGW connections	max. 32

IE/WSN-PA LINK

■ Overview

- The IE/WSN-PA LINK is a network transition for the connection of WirelessHART field devices (HART V7.1) to Industrial Ethernet, as an alternative or supplement to the wired connection.
- Connection of up to 100 WirelessHART devices
- Approved for operation in hazardous areas in Zone 2
- Open TCP/IP communication and Modbus TCP via the Ethernet interface
- Can be used with HART-OPC servers of the HART Communication Foundation

Note:

A general introduction to WirelessHART and information on the WirelessHART adapter and the WirelessHART field devices can be found in Catalog FI 01 or on the Internet at www.siemens.com/wirelesshart

■ Benefits

g e t
get   Designed for Industry

- Extended possible solutions for connecting process industry field devices by means of alternative or supplementary WirelessHART communication
- Reliable data transmission using intermeshed network technology; the self-organizing network with alternative paths enables radio obstacles to be bypassed
- Reduction of cabling costs under difficult installation conditions, e.g. if the field devices are located on inaccessible plant components or are only required temporarily
- To improve process monitoring and for maintenance tasks, sensors can be retrofitted
- Existing transmitters can be integrated wirelessly into maintenance and diagnostics systems by means of WirelessHART adapters
- Without additional software, restricted monitoring is possible via web services and the integrated web server of the IE/WSN-PA LINK.

■ Application

The IE/WSN-PA LINK connects wireless HART field devices by radio to the Ethernet. On the radio side, the IE/WSN-PA LINK supports the WirelessHART standard and on the Ethernet side the TCP/IP and Modbus TCP communication.

The IE/WSN-PA LINK thus enables wireless diagnostics, maintenance and process monitoring.

Monitoring

WirelessHART is particularly suitable for use in plant sections that are to be included in monitoring, but which do not have any existing MSR cabling, e.g. external tank stores or other installations where high cabling costs are anticipated. Data for the visualization can be retrieved from the IE/WSN-PA link via Industrial Ethernet or Modbus TCP.

Monitoring of process states via WirelessHART

Application (continued)

Retrofitting for diagnostics and maintenance

For this application, wireless adapters are looped into the 4-20 mA interface or screwed directly onto the HART device. The acyclic HART message frames are transmitted by radio between IE/WSN-PA LINK and a wireless adapter. Without affecting the operation of the plant, the wireless adapter modulates the acyclic HART message frames to the 4-20 mA interface or extracts them from the 4-20 mA interface.

The IE/WSN-PA LINK collects the data of all wireless adapters and transfers it via Industrial Ethernet to the diagnostics and maintenance station.

If greater distances between the IE/WSN-PA LINK and the monitoring station are to be spanned without cabling, this can be implemented by means of Industrial Wireless LAN with the access points and client modules of the SCALANCE W family.

Retrofitting of plants for diagnostics and maintenance

Design

- 2 x 10/100/1000 Mbit/s RJ45 ports, electrical (no integral switch; interfaces can be used, for example, for continuous connection to the plant network as well as the temporary connection of a PC)
- 1 x screw terminal for connection to Modbus RTU via RS485
- 1 x screw terminal for the 24 V DC connection
- Rugged metal enclosure with IP65 protection for use outdoors, also in hazardous zone 2
- Mounting: wall or mast mounting (vertical); U-bolts for mast mounting are included in the scope of delivery.

Product versions

- With integral, non-detachable antenna
- With N connector for connection of external antennas

Function

WirelessHART

The IE/WSN-PA LINK establishes on the radio side an inter-meshed wireless sensor network for communication with wireless field devices (e.g. transmitters). The data from the wireless field devices is received by the IE/WSN-PA LINK and transmitted via Industrial Ethernet to the connected systems. The supported wireless network is an open wireless network specified by the HART Communication Foundation (HCF) in accordance with the WirelessHART (HART V7.1) standard.

On the field device side, the IE/WSN-PA LINK requires field devices that support WirelessHART (HART). Existing field devices can be integrated by means of wireless adapters into the WirelessHART communication. To this end, the adapters are looped into the 4-20 mA interface. In addition, as many as four standard HART field devices with external power supply can be connected to the adapter in multidrop mode. Individually connected devices can be operated with the battery of the adapter.

The adapter wirelessly transmits all data and process values of the connected devices. The advantage of this solution is that tried and tested devices can continue to be used.

Industrial Ethernet

Via the Ethernet interface the IE/WSN-PA LINK supports the use of the HART OPC server and the Modbus TCP protocol.

Configuration

The configuration is web-based, without additional software, and performed from the PC. By means of the web user interface it is also possible to display the device states and measured values of the WirelessHART devices.

2

Integration

Integration into automation systems

The IE/WSN-PA LINK can be integrated into automation systems via Ethernet or Modbus TCP. Communication modules (CP 343-1 or CP 443-1) are required to connect the IE/WSN-PA LINK to SIMATIC S7-300/400. Function blocks and technical support can be found at:

www.siemens.com/simatic-net/ik-info

Integration in PCS 7

For integration of the IE/WSN-PA LINK into PCS 7 you can obtain function blocks and technical support at:

IE/WSN-PA LINK

Gateway between WirelessHART and Industrial Ethernet; transmission frequency: 2.4 GHz
- With integral, non-detachable antenna — **6GK1 411-6CA40-0AA0**
- N connector for connection of external antennas — **6GK1 411-6CA40-0BA0**

Antennas

Antennas with omni-directional characteristics; country permits, compact instructions (hard copy), German/English

Wall or mast-mounting
- **Antenna ANT792-6MN** Antenna gain including N-Connect connector 6 dBi, 2.4 GHz — **6GK5 792-6MN00-0AA6**

Roof mounting
- **ANT795-6MN antenna** Antenna gain incl. N-Connect connector 6/8 dBi, 2.4/5 GHz — **6GK5 795-6MN00-0AA6**
- **Antenna mounting tool (ANT795-6MN)** Mounting tool for installation of ANT795-6MN under a roof — **6GK5 795-6MN01-0AA6**

LP798-1N Lightning Protector — **6GK5 798-2LP00-2AA6**

Lightning protector with N/N female/female connector, IP65 (-40 to +100 °C)

Antenna cables

IWLAN N-Connect male/male flexible connection cable

Flexible connecting cable for connecting an external antenna; assembled with two N-Connect male connectors
- 1 m — **6XV1 875-5AH10**
- 2 m — **6XV1 875-5AH20**
- 5 m — **6XV1 875-5AH50**
- 10 m — **6XV1 875-5AN10**

HF coupling — **6GK5 798-0CP00-1AA0**

N-Connect male/male connector for connecting the LP798-1N lightning protector

Accessories

IE FC M12 Plug PRO

M12 plug-in connector suitable for on-site assembly (D-coded, IP65/IP67), metal housing, FastConnect connection system, for connecting HARTING adapter cables to the Industrial Ethernet
- 1 unit — **6GK1 901-0DB20-6AA0**

IE FC TP Standard Cable GP 2 x 2 (Type A) — **6XV1 840-2AH10**

4-core, shielded TP installation cable for connection to IE FC Outlet RJ45/IE FC RJ45 Plug; PROFINET-compatible; with UL approval; sold by the meter; max. length 1000 m, minimum order quantity 20 m

IE FC Stripping Tool — **6GK1 901-1GA00**

Preadjusted stripping tool for fast stripping of the Industrial Ethernet FC cables

Network components for IWLAN — see "Industrial Wireless Communication"

HARTING adapter cable [1] — **21 03 683 6420**
M12 female NPT 1/2 thread to RJ45 11 cm, (minimum order quantity: 10); The adapter is provided for easy connection of the link to the Industrial Ethernet;

Not included in the scope of delivery of the IE/WSN-PA link; You can find ordering information on the Internet at: www.harting.com/en/kontakt/adressen/

SITOP compact 24 V/ 0.6 A — **6EP1 331-5BA00**

1-phase power supply with wide-range input 85 – 264 V AC/110 – 300 V DC, stabilized output voltage 24 V, rated output current value 0.6 A, slim design

[1] When using the Harting adapter cable for the Ethernet connection, the requirements for intrinsic safety approval are not applicable. When used in an application relevant to intrinsic safety guidelines, it requires acceptance by the appropriate approval agency.

PN/PN coupler

Overview

- Maximum data exchange of 256-byte input data and 256-byte output data between two PROFINET networks
- Maximum of 16 input/output ranges for the exchange of data
- Electrical isolation between the two PROFINET IO subnets
- Redundant power supply
- Supported Ethernet services
  - ping
  - arp
  - network diagnostics (SNMP/MIB-2)
- Diagnostic interrupts
- ReturnOfSubmodule interrupts

Application

The PN/PN coupler is used to link two Ethernet subnets with one another and to exchange data. The maximum size of the data which can be transferred is 256 byte input data and 256 byte output data.

As a device, the PN/PN coupler has two PROFINET interfaces, each of which has two ports and each of which is linked to another subnet.

During configuring, two IO devices are produced from this one PN/PN coupler which means that there is one IO device for each station with its own subnet. The other part of the PN/PN coupler in each case is known as the bus node. Once configuring is complete, the two parts are joined.

Design

The PN/PN Coupler is located within a 120 mm enclosure. It is installed with a DIN rail (7.5 mm or 15 mm).

The coupler is connected to the PROFINET PN IO networks using RJ45 plug-in connectors.

Function

The PN/PN coupler continuously copies the output data of one network to the input data of the other network (and vice versa).

Parameterization

You either configure the PN/PN coupler using STEP 7 or a configuring tool which uses a GSD file to integrate the PN/PN coupler. You can use STEP 7 to set the required length of the input and output data. The output data of one side of the PN/PN coupler serve as input data for the other side, and vice versa.

You configure the I/O ranges using universal modules which are plugged into slots on the PN/PN coupler like real modules from the hardware catalog in the HW configuration. The universal modules span an I/O range over which data is exchanged between the two PROFINET subnets. The local CPU uses slot's configured inputs to read the values which the CPU of the other slot writes using the bus node's configured outputs. The local CPU uses slot's configured outputs to write values which the CPU of the other subnet receives using the bus node's configured inputs.

2

Function (continued)

Example

The following example shows that both networks are independent of one another. This means that the user gives each PROFINET I/O network its own device name.

In the following picture, you can see device name "Subnet1" in network 1 and "Subnet2" in network 2:

Main FC of the PN/PN coupler (example)

deviceWISE Embedded Edition for SIMATIC S7

Overview

- deviceWISE Embedded for S7 is a software package that can be loaded into the CP 343-1 ERPC communication processor as a firmware extension
- It facilitates intelligent and direct communication from the S7-300 to IT applications at the management level (e.g. databases)
- No programming is required in SIMATIC

Benefits

- High-speed integration of machine controllers into IT applications, e.g. reading or writing to databases by means of parameterization without any programming effort in the S7-300
- Reliable delivery of critical process data by means of store & forward functionality as well as in-built local database
- Complex preprocessing of data in the PLC with numerous trigger options
- Supports standard protocols such as OPC UA or XML-DA directly from the PLC

Application

deviceWISE Embedded for S7 offers the database interface of the SIMATIC S7 with CP 343-1 ERPC to various ERP or MES systems for vertical integration.

Database communication

deviceWISE Embedded for S7 establishes direct connections from the PLC to the leading database systems. The user can perform a host of operations on the linked databases, such as:

- Documentation of production data in the database
- Updating of existing entries, e.g. recording and saving new data as the production of a component progresses
- Retrieval of data from the database, e.g. recipes or configuration data for the current production

Message-queue communication

The software enables the user to communicate directly with the Enterprise Service Bus (ESB) and transfer data from the controller to applications in the enterprise IT system. Messages can be sent and received in ASCII or XML. User-specific data formats can also be defined.

Device communication

deviceWISE Embedded for S7 is used predominantly for communication with enterprise applications. In addition, the software can establish connections to other automation devices and transfer data from other PLC systems, RFID readers, or cameras into the data area of the S7-CPU. This is done via the backplane bus and enables flexible mapping of data from the widest variety of devices into the data blocks of the PLC.

deviceWISE Embedded Edition for SIMATIC S7

■ Function

The deviceWISE Embedded for S7 software includes a user-friendly tool – the workbench – for the configuration and management of data.

This enables one or more deviceWISE modules to be addressed without any programming overhead.

The workbench offers a wide range of drag & drop mechanisms and enables trigger conditions to be defined. This significantly reduces the possibilities of errors when entering addresses or field names. In addition, it is possible in the workbench to process raw data into useful information and transport it from programmable controllers to databases or message queues in the IT environment of an enterprise.

deviceWISE Embedded for S7 offers the following functions:

Direct connection to the following SQL databases:

- IBM DB2
- IBM DB2/400 (for OS/400 systems)
- Oracle
- Oracle Manufacturing Operations Center
- Microsoft SQL Server
- MySQL

Direct connection to the following messaging systems:

- IBM Websphere MQ
- IBM MQTT
- IBM SIB/JMS
- TCP

Extensive preprocessing of the data

Using deviceWISE Embedded for S7, extensive preprocessing of data (e.g. mathematical operations, flow diagram processing), the use of a local SQL database, and an in-built FTP server/client functionality are possible.

Error handling and correction by means of:

- Store and forward for all enterprise transactions
- E-mail notification in the event of faults
- Fault signaling to the PLC

Direct connection to other terminals

deviceWISE Embedded for S7 allows the direct connection of the CP 343-1 ERPC communication processor to the following terminals:

- PLC systems (Siemens, Rockwell, Mitsubishi, Omron)
- Camera systems
- RFID readers

In addition, open-standard protocols such as Modbus TCP, OPC UA or XML-DA are supported.

■ More information

The software is available at:

ILS Technology LLC;
5300 Broken Sound Blvd.
Suite 150
Boca Raton, FL, U.S.A., 33487

PROFIBUS

PROFIBUS

Introduction

Overview

- Bus system
  - for process and field communication with field devices from different manufacturers
  - and for data communication acc. to IEC 61158/61784
- PROFIBUS – the fieldbus standard in production and process engineering comprises:
  - Specification of the standards for the physical characteristics of the bus and the access procedure
  - Specification of the user protocol and the user interface

- Offers openness for interfacing to standardized non-Siemens components
- Process or field communication
  - PROFIBUS DP for fast, cyclic data exchange with field devices
  - PROFIBUS PA for applications in process automation and in the intrinsically safe area
- Data communication
  - PROFIBUS FMS for data communication between programmable controllers of different manufacturers

PROFIBUS in the communication landscape

Benefits

get Designed for Industry

- PROFIBUS is a powerful, open, and rugged bus system that ensures trouble-free communication.
- The system is fully standardized, which enables trouble-free connection of standardized components from a variety of manufacturers.
- Configuration, commissioning, and troubleshooting can be carried out from any location. This results in user-defined communication relationships that are very versatile, simple to implement, and easy to change.
- Fast assembly and commissioning on site with the help of the FastConnect wiring system.
- Continuous monitoring of network components through a simple and effective signaling concept.
- High security of investment since existing networks can be extended without any adverse effects.
- High availability through ring redundancy with OLM.

More information

Please always note the supplementary conditions for the specified SIMATIC NET products (order numbers 6GK..., 6XV1...), which you can view on the Internet pages below:
www.siemens.com/simatic-net/ik-info

■ **Overview**

Communication functions

Process or field communication (PROFIBUS DP, PROFIBUS PA) is used to link field devices to a programmable controller, HMI system or control system.

Interfacing is performed over integrated interfaces on the CPU or through interface modules (IMs) and communications modules (CPs, CMs).

With modern high-performance automation systems, it is often more effective to link more than one PROFIBUS DP line to one system, not just to increase the number of I/O devices that can be connected, but also to enable individual production areas to be handled independently of one another (segmentation).

PROFIBUS standardized to IEC 61158/61784 is a high-performance, open, rugged fieldbus system with short response times and the following protocols:

PROFIBUS DP

(Distributed I/O) is used to connect distributed I/O stations, such as SIMATIC ET 200 with extremely fast response times in accordance with the IEC 61158/EN 50170 standard.

PROFIBUS PA

(Process Automation) extends PROFIBUS DP with failsafe transmission technology in accordance with the international standard IEC 61158-2.

DP	PA				
●	●				

3

PROFIBUS
Introduction

Process or field communication

■ **Overview** (continued)

PROFIBUS is used to connect field devices, e.g. distributed I/O devices or drives, to automation systems such as SIMATIC S7, or PCs.

PROFIBUS is used when I/O devices are widely distributed on the machine or in the plant (e.g. at the field level) and can be combined into one station (e.g. ET 200), typically more than 16 inputs/outputs.

The actuators and sensors are connected to field devices. The field devices are supplied with output data in accordance with the master/slave technique and transfer input data to the programmable controller or PC.

High-performance tools such as STEP 7 are available for configuring and parameterizing the I/O devices. Testing and start-up is possible over PROFIBUS DP from any connection point using these tools.

PROFIBUS DP slaves

■ **Overview** (continued)

DP device types

PROFIBUS DP distinguishes between two different master classes and different DP functions:

DP Master Class 1

The DP master Class 1 is the central component on PROFIBUS DP. The central controller or PC exchanges information with distributed stations (DP slaves) in a fixed, repeated message cycle.

DP Master Class 2

Devices of this type are used (programming, configuration or control devices) during start-up, for configuring the DP system or for controlling the plant during normal operation (diagnostics). A DP master Class 2 can be used, for example, to read the input, output, diagnostics and configuration data of the slaves.

DP slave

A DP slave is an I/O device that reads in input data and forwards output data to the I/O. The volume of input and output data depends on the device and can be up to 244 bytes.

The functional scope can differ between DP masters of Class 1 and 2 or DP slaves. This determines the performance and availability of a communication processor.

DP-M	DP-S				
●	●				

DP-V0

The DP master functions (DP-V0) comprise configuration, parameterization, read input data and write outputs in cycles, read diagnostics data.

DP-V1

The additional DP function expansions (DP-V 1) make it possible to perform non-isochronous read and write functions as well as acknowledgement of alarms at the same time as processing cyclic data communication. These extended DP functions comprise acyclic access to the parameters and measured values of a slave (e.g. field devices of process automation and intelligent HMI devices). This type of slave must be supplied with extensive parameter data during start-up and during normal operation. Data transferred in acyclic mode (e.g. parameterization data) are only rarely changed, in comparison to the cyclic measured values, and are transferred at lower priority in parallel with the cyclic high-speed useful data transfer. Alarm acknowledgement by the master ensures reliable transfer of the alarms from DP slaves.

DP-V2

The DP master functions (DP-V2) comprise functions for isochronous mode and direct data communication between DP slaves.

Isochronous mode

Isochronous mode is implemented by means of a signal with a constant bus cycle for the bus system. This isochronous, constant cycle is sent by the master to all bus stations in the form of a global control message. The master and slave can then synchronize their applications with this signal. The jitter of this signal from cycle to cycle must be less than 1 µs for typical drive applications.

Direct data communication between DP slaves

The publisher/subscriber model is used to implement the direct data communication between slaves. Slaves declared as publishers make their input data (corresponds to response message to their own master) available to other slaves, the subscribers, for reading. Direct slave-to-slave communication is performed cyclically.

- Read/write record (acyclic)

G_IK10_XX_50004

DP Master Classes

Overview

Communication functions

Data communication (e.g. PROFIBUS FMS) serves to exchange data between programmable controllers or between a programmable controller and intelligent partners (PC, computers, etc.).

The following communication functions are available for this purpose:

FMS communication

This is a standardized protocol for data communication via PROFIBUS.

- PROFIBUS FMS (Fieldbus Message Specification)

This is ideally suited to communication from different automation systems (e.g. PLCs, PCs) from different manufacturers at the cell level with only a few stations (max. 16). Communication with field devices using the FMS interface is also possible.

With the FMS services READ, WRITE and INFORMATION REPORT, read or write access to variables of the communication partner is possible from the user program by means of a variable index or variable name, or the user program can transfer its own variable values to a communications partner. Partial access to variables is supported. The communication is processed over acyclic connections (master-to-master, master-to-slave), over acyclic connections with a slave initiative or with cyclic connections (master-to-slave). The INFORMATION REPORT is can also be used to send a message to all stations on the network using a broadcast service. The FMS service IDENTIFY (request for identification characteristics of the partner) and STATUS (request partner status) can also be activated.

OPC-Server

The basic principle of OPC (Openness, Productivity & Collaboration) is that OPC client applications communicate with the OPC server over a standardized, open and manufacturer-independent interface.

The appropriate OPC servers are included in the scope of supply of the respective communication software.

PG/OP communication

Comprises integral communication functions that are used by the SIMATIC programmable controllers to perform data communication with HMI devices (e.g. TD/OP) and SIMATIC PG (STEP 7). PG/OP communication is supported by MPI, PROFIBUS and Industrial Ethernet networks.

S7 routing

With the aid of S7 routing it is possible to use the programming device communication across networks.

S7 communication

S7 communication is the integral communication function, which has been optimized within the SIMATIC. It enables PCs and workstations to be connected. The maximum volume of useful data per task is 64 KB. S7 communication offers simple, powerful communication services and provides a network-independent software interface for MPI, PROFIBUS and Industrial Ethernet networks.

Open communication

The open communication (SEND/RECEIVE) allows the SIMATIC S7 controllers to communicate with other SIMATIC S7 and SIMATIC S5 controllers, PCs, and third-party systems.

		●	●	●	●

Data communication

3

■ **Overview** (continued)

System connections

For many data terminals, communications processors (CPs) are available that already have the communications functions implemented in the firmware and that therefore relieve the data terminal of communications tasks (e.g. flow control, blocking, etc.).

PROFIBUS
Introduction

Topologies

■ Overview

Siemens offers a comprehensive range of PROFIBUS network components for electrical and optical transmission technology.

PROFIBUS is standardized in accordance with IEC 61158/ EN 50170 for universal automation (PROFIBUS FMS and PROFIBUS DP), and in accordance with IEC 61158-2 for process automation (PROFIBUS PA).

Electrical network

- The electrical network uses a shielded twisted pair cable. The RS 485 interface works with voltage differences. It is therefore less sensitive to interference than a voltage or current interface. With PROFIBUS, the stations are connected to the bus via a bus terminal or a bus connector (max. 32 stations per segment).
- The individual segments are connected via repeaters.
- The transmission rate can be set in steps from 9.6 kbit/s to 12 Mbit/s.
- The maximum segment length depends on the transmission rate.
- The electrical network can be configured as a bus or tree structure
- For applications in the intrinsically-safe area, the transmission technology compliant with IEC 61158-2 is used with PROFIBUS PA. The transmission rate in this case is 31.25 kbit/s.

Characteristics

- High-grade bus cable
- Transmission method: RS 485 (acc. to EIA)
- Bus topology with bus terminals and bus connectors for connecting PROFIBUS stations
- Transmission method in accordance with IEC 61158/ EN 50170 for universal automation (PROFIBUS FMS/DP), and in accordance with IEC61158-2 for the intrinsically-safe area (PROFIBUS PA)
- The DP transmission system of RS 485 (bit coding by means of differential voltage signals) is converted to IEC 61158-2 (bit coding by means of current signals) using the network components (DP/PA coupler or DP/PA link)
- Simple, universal installation and grounding concept
- Easy installation

Electrical PROFIBUS network configuration

Overview (continued)

Optical network

The fiber-optic cable variant of PROFIBUS has the following characteristics:

- Transmission link is insensitive to electromagnetic influences
- Suitable for long ranges
- Galvanic isolation
- Uses either plastic, PCF or glass fiber-optic cables
- Avoidance of overvoltage and equipotential bonding problems

Optical PROFIBUS with OLMs

Using optical link modules (OLM) it is possible to construct an optical network in a linear, ring, or star topology. The maximum distance between two OLMs is 15 km. The transmission rate can be set in steps from 9.6 kbit/s to 12 Mbit/s.

Optical PROFIBUS with integral interface and OBT

The optical PROFIBUS with integral interface and OBT is constructed in a linear topology. A cost-optimized solution is available for this in the form of devices with integral optical interface. Terminal equipment with an RS 485 interface can be connected via an Optical Bus Terminal (OBT). The maximum distance between two nodes is 50 m in the case of plastic fiber-optic cables. Special fiber-optic cables are available to cover distances of up to 400 m.

Hybrid network

Hybrid electrical and optical networks are possible.
The transition between both media is implemented by the OLM.

In station-to-station communication on the bus, there is no difference between two-wire technology and fiber-optic technology. A maximum of 127 stations can be connected to one PROFIBUS network.

The optical transmission technology offers the following advantages:

- Fiber-optic cables made of plastic or glass are not susceptible to electromagnetic interference and therefore render the EMC measures required for electrical networks unnecessary
- No additional lightning protection concept is required in the outdoor area
- The potentials on the modules are automatically separated thanks to the characteristics of the conductor
- With fiber-optic cables, long distances to field devices can be bridged.

Network configuration combining electrical and optical PROFIBUS

Connection example of an intrinsically-safe network with PROFIBUS PA

Overview

- Quick and easy assembly of PROFIBUS copper cables
- Assembly mistakes such as short-circuits between the shield and core are excluded

Benefits

g e**get** Designed for Industry

- Shorter connection times for terminals by stripping of the outer cladding and woven shield in one step
- Installation faults, such as short-circuits between the shield and cores, are excluded
- Easy assembly due to preset insulation stripping tool (FC stripping tool)
- Termination can be checked in the assembled state through the transparent cover for the insulation piercing terminals thanks to color coding.

Design

The system comprises 3 compatible components:
- FastConnect bus cables for rapid installation
- FastConnect stripping tool
- FastConnect bus connector for PROFIBUS

The PROFIBUS FastConnect bus cables can also be connected to conventional bus connectors.

Function

The FastConnect stripping method enables fast and easy connection of PROFIBUS connectors to the PROFIBUS cables.

The special structure of the FastConnect bus cables enables the use of the FastConnect stripping tool with which the outer casing and the woven shield can be stripped in one operation with perfect precision. The cable prepared in this way is connected in the FastConnect bus connector using the insulation displacement method.

PROFIBUS FastConnect

Application

PROFIBUS FastConnect is a system for fast and easy assembly
of PROFIBUS copper cables.

Steps in assembling PROFIBUS copper cables with PROFIBUS FastConnect

Overview

- Different variants for different application areas (e.g. underground cables, trailing cables, hazardous area Zone 1 and Zone 2)
- High interference immunity thanks to double shielding
- Flame-retardant bus cable (halogen-free)
- Easy length measurement thanks to printed meter markings
- UL approvals

Benefits

- Flexible application possibilities thanks to special bus cables
- Network is immune to interference thanks to double shielded cables and a uniform grounding concept
- Time saving due to simple and FastConnector assembly with FastConnect cables
- Silicon-free, therefore particularly suitable for use in the automotive industry (e.g. on paint shop conveyors)

Application

For the construction of PROFIBUS DP networks, different cable types are offered to suit the different types of applications. The listed bus cables should always be used. For further information on network configuration, see the PROFIBUS network manual.

UL approvals

UL listing (safety standard) for network cables is especially necessary for the American and Canadian markets. The requirements for the appropriate approvals depend on where the cable is routed within the building. This applies to all cables which have to be routed from a machine to a remote control cabinet and are positioned on cable racks secured on the building. Cables with UL approval have "GP" (General Purpose) added to their name.

Ex approval

Cables for intrinsically safe PROFIBUS DP applications have "IS" (intrinsically safe) added to their names

Design

Shielded, twisted-pair cable with circular cross-section

The following applies for all PROFIBUS bus cables:

- The double shield makes it especially suitable for routing through industrial areas with strong electro-magnetic fields
- System-wide grounding concept can be implemented using the external shield of the bus cable and the grounding terminals on the bus terminal
- Printed meter marks

Cable types

The shape of the FastConnect (FC) bus cables is radially symmetric and allows an insulation stripping tool to be used. This means that bus connectors can be assembled quickly and easily.

- PROFIBUS FC Standard Cable GP:
  Standard bus cable specially designed for fast installation
- PROFIBUS FC Standard Cable IS GP:
  Standard bus cable with special design for quick installation for intrinsically safe distributed I/O systems
- PROFIBUS FC Robust Cable:
  Special cable for use in corrosive atmospheres and under severe mechanical loading
- PROFIBUS FC Food Cable:
  The PE casing of the cable makes this cable suitable for use in the food and tobacco industry
- PROFIBUS FC Ground Cable:
  Special cable for laying underground. It differs from the PROFIBUS bus cable in that it has an additional sheath
- PROFIBUS FC Flexible Cable
  Flexible (stranded conductors), halogen-free bus cable with PUR sheath for occasional moving
- PROFIBUS FC Trailing Cable:
  Bus cable specially designed for forced motion control in a trailing cable, e.g. with continuously moving machine parts (stranded core)
- PROFIBUS FC FRNC Cable GP:
  Two-core, shielded, flame-retardant, halogen-free bus cable with Copolymer outer sheath FRNC (Flame Retardant Non Corrosive)

Bus cables without FastConnect technology (due to type of construction)

- PROFIBUS Festoon Cable GP:
  Flexible bus cable (stranded cores) specially designed for festoon suspension.
  For round cables, cable-carrying trolleys are recommended
- PROFIBUS Torsion Cable
  Bus cable for highly flexible applications:
  Special cable (stranded cores) for use on moving parts of machines
  (5 million torsion movements on 1 m length of cable, ± 180°)
- PROFIBUS Hybrid Cable GP:
  Rugged hybrid cable suitable for trailing with two copper conductors for data transmission and two copper conductors for the power supply of ET 200pro
- SIENOPYR FR marine cable
  Halogen-free, non-crush, flame-retardant, marine-approved cable for permanent installation on ships and offshore platforms indoors and on open deck. Sold by the meter.

More information

Installation instructions

The bus cables are supplied by the meter. If a bus segment must be assembled using two sections (e.g. > 1000 m segment length), bushings can be used for this purpose (low-impedance connection between cores with clamps, connect shields over a wide area).

FastConnect

The FastConnect stripping tool can be used to strip the outer sheath and shield of the new FastConnect bus cables to the right length in one step.
In this way, the bus connectors (except 6ES7 972-0BA30-0XA0) can be connected easily and quickly to the bus cable.

Cable routing

During storage, transport and cable laying, keep both ends sealed with a shrink-on cap.

Comply with the permissible bending radii and tensile load!

An underground cable must be used if cables are laid outside buildings e.g. directly in the ground, in sand or in concrete building blocks or when routed through protective pipes made of steel or plastic above or below ground.

Comply with overvoltage protection guidelines for underground laying.

Note:

You can order components supplementary to the SIMATIC NET cabling range from your local contact.

Technical advice on this subject is available from:

Overview

In the ECOFAST system, all devices with bus capability are connected to PROFIBUS DP using the bus cables.

The bus cable is implemented as a hybrid cable and contains:

- PROFIBUS DP in copper RS 485;
- Four additional copper cores for carrying 24 V DC:
  - 24 V DC, not switched (for electronics and inputs)
  - 24 V DC, switched (for outputs, disconnectable e.g. for EMERGENCY OFF)

The ECOFAST hybrid cables are sold by the meter or in fixed lengths preassembled with ECOFastConnector (Han Brid) and socket.

Benefits

- Savings in wiring, installation, commissioning and operation as result of standardized connection system (copper or fiber-optic) with high degree of protection (IP65)
- With ECOFAST, the turnaround times for offers, planning and engineering of machines and plants can be reduced
- ECOFAST permits fast and problem-free startup of automation and drive systems
- Minimization of sources of error by means of standardized interfaces and plug connectors.
- With ECOFAST plants remain highly available: No interruption of power and fieldbus when replacing equipment.

PROFIBUS
Electrical networks (RS485)

Energy cables

■ Overview

- Different versions (5-core, 2-core) for different fields of application
- Pre-assembled M12 plug-in cables for energy transfer
- Rugged cable design for installation in industrial applications
- UL approvals
- Easy length measurement thanks to printed meter markings

■ Benefits

get **get** Designed for Industry

- Flexible application possibilities thanks to rugged cable design
- Silicon-free, therefore particularly suitable for use in the automotive industry (e.g. on paint shop conveyors)

■ Application

Different cable types are needed to supply power to Industrial Ethernet/PROFINET or PROFIBUS. The listed power cables should always be used. They are used for devices with IP65/67 degree of protection to connect the signaling contact or 24-V supply of the SCALANCE X and SCALANCE W components (power cable 2x0.75) and for the power supply (power cable 5x1.5 for ET 200).

In addition, preassembled power connecting cables (4 x 0.75) are available in different lengths for the power supply of the ET 200 (M12 Power Connecting Cable).

UL approvals

As a result of appropriate UL styles, the cables can be used worldwide.

■ Design

Rugged 2-core, 4-core or 5-core cable with circular cross-section for connection of signaling contact and power supply to IP65/67 components in industrial areas.

Cable types

The following cables with industrial capability are available for connection of the power supply and signaling contact:

- Energy cable 2 x 0.75;
  power cable for connection of signaling contact and 24 V supply voltage to SCALANCE X and SCALANCE W components
- Energy cable 5 x 1.5;
  power cable for connection of 24 V power supply of ET 200 using 7/8" plug connectors
- M12 Power Connecting Cable M12-180/M12-180;
  4-core M12 power connecting cables (A-coded) with straight cable outlet for 24 V power supply of the ET 200 (pre-assembled)

More information

Cable routing:

During storage, transport and cable laying, keep both ends sealed with a shrink-on cap.

Comply with the permissible bending radii and tensile load!

<u>Note:</u>

You can order components supplementary to the SIMATIC NET cabling range from your local contact.

Technical advice on this subject is available from:

RS485 bus connector

3

Overview

- Used for connecting PROFIBUS nodes to the PROFIBUS bus cable
- Easy installation
- FastConnect plugs ensure extremely short assembly times due to their insulation-displacement technology
- Integrated terminating resistors (not in the case of 6ES7 972-0BA30-0XA0)
- PG connection with special bus connector possible without additional installation of network nodes.

Application

The RS485 bus connectors for PROFIBUS are used for connecting a PROFIBUS node or a PROFIBUS network component to the bus cable for PROFIBUS.

Design

Several different versions of the bus connector are available, each optimized for the devices to be connected:

- Bus connector with axial cable outlet (180°), e.g. for PCs and SIMATIC HMI OPs, for transmission rates up to 12 Mbit/s with integrated bus terminating resistor.
- Bus connector with vertical cable outlet (90°);

This connector permits a vertical cable outlet (with or without PG interface) for transmission rates of up to 12 Mbit/s with integral bus terminating resistor. At a transmission rate of 3, 6 or 12 Mbit/s, the SIMATIC S5/S7 plug-in cable is required for the connection between bus connector with PG-interface and programming device.

- Bus connector with 30° cable outlet (low-cost version) without PG interface for transmission rates of up to 1.5 Mbit/s and without integrated bus terminating resistor.
- PROFIBUS FastConnect bus connector RS485 (90° or 180° cable outlet) with transmission rates up to 12 Mbit/s for fast and easy assembly using insulation displacement connection technology (for rigid and flexible wires).

Function

The bus connector is plugged directly to the PROFIBUS interface (9-pin Sub-D connector) of the PROFIBUS node or a PROFIBUS network component.

The incoming and outgoing PROFIBUS bus cable is connected through four terminals in the connector.

The line termination integrated in the bus connector can be connected through an externally accessible switch (not with 6ES7 972-0BA30-0XA0). Here, incoming and outgoing bus cables are separated in the connector (isolating function).

This is mandatory at both ends of a PROFIBUS segment.

PROFIBUS
Electrical networks (RS485)

830-1T connecting cable

Overview

- Prefabricated cable for fast and cost-effective connection of PROFIBUS nodes to OLM and OBT
- Flexible PROFIBUS connecting cable

Benefits

g e**get** Designed for Industry

- Trouble-free connection of end stations through pre-assembled connecting leads
- Reliable data transmission to the end station in EMC-exposed environment through direct cable shielding and termination.

Design

The 830-1T connecting cable consists of a twisted-pair cable (wires made of stranded copper) with a woven shield.

It has a 9-pin Sub-D plug at both ends.

Both cable ends are terminated by a resistor combination (cannot be switched off).

Function

The PROFIBUS 830-1T connecting cable is used for connecting the electrical PROFIBUS interface to the PROFIBUS nodes (OLM, OBT and data terminals) for data transmission rates of up to 12 Mbit/s.

Ordering data	Order No.

• 1.5 m long	**6XV1 830-1CH15**
• 3 m long	**6XV1 830-1CH30**

Overview

- Prefabricated cable for connection of PROFIBUS nodes (e.g. HMI) to PLCs
- Flexible PROFIBUS connection cable for up to 12 Mbit/s

Benefits

get   Designed for Industry

- Trouble-free connection of end stations through pre-assembled connecting leads
- Direct connection of a PG through the PG interface without interrupting the connection between the stations.

Design

The 830-2 connecting cable comprises a standard PROFIBUS bus cable. It is preassembled with two 9-pin connectors (6GK1 500-0EA02 and 6ES7 972-0BB11-0XA0). One plug of the preassembled connecting cable is equipped with a PG interface.

Function

The 830-2 connecting cable is used to connect PROFIBUS nodes (e.g. HMI) to automation devices for transmission rates up to 12 Mbit/s.

PROFIBUS
Electrical networks (RS485)

PROFIBUS M12 and 7/8"
connecting cable/connector

■ Overview

Flexible connecting cables and FastConnect (FC) plug-in connectors that can be assembled in the field for transmission of data (up to 12 Mbit/s) or for power supply between PROFIBUS nodes with degree of protection IP65

PROFIBUS M12 plug-in cable

- Preassembled plug-in cable (PROFIBUS FC Trailing Cable) for connecting PROFIBUS nodes (e.g. SIMATIC ET 200) to degree of protection IP65
- For transmission rates up to 12 Mbit/s

7/8" connecting cable

- Preassembled plug-in cable for supplying power to PROFIBUS nodes (e.g. SIMATIC ET 200) to degree of protection IP65

PROFIBUS FC M12 Plug PRO (D-coded) and 7/8" plug-in connector

- For establishing direct connections between devices on PROFIBUS installation and power cables with M12 or 7/8" connections
- Excellent EMC shielding and deflection (metal housing)
- Easy assembly due to integrated FastConnect technology (FC M12 Plug)
- Viewable contact area prevents errors

■ Benefits

g e t Designed for Industry

- Time-saving and fault-free connection of terminal stations by means of prefabricated connection cables
- Easy assembly on site for application-specific M12 and 7/8" plug-in cables by means of FC M12 and 7/8" plug-in connectors that can be assembled in the field

■ Design

M12 plug-in cable

- Comprises the PROFIBUS Trailing Cable
- Pre-assembled with two 5-pole M12 male/female connectors; B-coded

7/8" plug-in cable

- Comprises the Energy Cable 5 x 1.5 mm^2
- Pre-assembled with two 5-pole 7/8" male/female connectors

■ **Technical specifications**

Order No.	6XV1 830-3DH10
Product type designation	**PROFIBUS M12 connecting cable**
Product description	Flexible connecting cable (2-core), preferred length, preassembled with two 5-pin M12 plugs/sockets (B-coded)
Suitability for application	Cable for connecting PROFIBUS nodes (e.g. SIMATIC ET 200) in IP 65 protection

- Note	-

Order No.	6XV1 830-3DH10
Product type designation	**PROFIBUS M12 connecting cable**
Color	
• of core insulation of data cores	Red / green
• of the cable sheath	Petrol
Bending radius	
• with single bending	40 mm
• with repeated bending	120 mm
• With continuous bending	-
Number of bending cycles	3 000 000
• Note	Suitable as trailing cable for 3 million bending cycles with a bending radius of 120 mm (15x D), and an acceleration of 4 m/s²
Number of torsion cycles with torsion by ± 180° on 1 m cable length	-
Maximum tensile load	100 N
Weight per length	77 kg/km
Permitted ambient conditions	
Ambient temperature	
• During operation	-40 … +60 °C
• During storage	-40 … +60 °C
• During transport	-40 … +60 °C
• During mounting	-40 … +60 °C
Ambient conditions for operation	Restricted segment lengths (see Manual for PROFIBUS networks)
IP degree of protection	IP65/67
Behavior in fire	Flame-retardant in accordance with IEC 60332-1-2
Chemical resistance	
• against mineral oil	Resistant
• against grease	Resistant
• against water	-
Radiological resistance to UV radiation	Resistant
Product properties, functions, components General	
Product property	
• Halogen-free	No
• Silicon-free	Yes
Standards, specifications, approvals	
UL listing at 300 V rating	Yes: CMX
UL-Style at 600 V rating	No
Certificate of suitability

More information

Special lengths with 90° or 180° cable outlet

You can find more information on the Internet at:
http://support.automation.siemens.com/WW/view/en/26999294

Overview

- For connecting PROFIBUS nodes with an RS485 interface to a segment
- Versions with transmission rates from 9.6 kbit/s to 12 Mbit/s
- Clear and easy mounting (can be snapped onto DIN rail)
- Clear location of faulty bus termination when bus terminal 12M is used
- PG connection with special bus terminal and PG connecting cable possible without additional installation of network nodes for bus terminal RS485.

Benefits

get   Designed for Industry

- Easy and clearly comprehensible connection of PROFIBUS stations thanks to preassembled, integrated connecting cable
- Simple cabinet pre-wiring by connecting the PROFIBUS connecting cable with integrated interfaces

Application

The PROFIBUS bus terminals enable a bus station to be connected to a PROFIBUS network.

- Pre-wired device connection for PROFIBUS node
- Easy connection of stations to PROFIBUS networks through insertion of the radial line with Sub-D plug
- Implementation of multipoint connections by directly interconnecting several bus terminals (up to 32 stations per segment) with the 12M bus terminal.

Design

Different versions are available:

- Up to 1.5 Mbit/s
  Bus terminal RS485
- Up to 12 Mbit/s
  Bus terminal 12M

Applicable to all versions:

- IP20 enclosure.
- Wall mounting or mounting on deep standard DIN rail possible.
- External 6-pin terminal block for connection of inoming and outgoing bus cable and equipotential bonding conductors.
- Integrated connecting cable with Sub-D plug for connection of nodes.
- Combination of terminating resistors can be connected by means of rotary switch.

The following additionally applies to the bus terminal 12M:

- Ranges for transmission rates can be adjusted by means of rotary switches.
- Supply to the bus terminal 12M by the connected PROFIBUS node (5 V DC/90 mA) via 9-pin Sub-D socket.
- For maximum segment lengths, see Technical Specifications.
- Incoming and outgoing bus cables are disconnected when inserting the terminating resistors.

Bus terminals

Function

- Connection of stations over flexible connecting cable with Sub-D connector
- Easy connection of the bus cable over the terminal block
- No bus interruption in response to a missing terminal
- Bus termination is possible over integral termination resistor combinations.

The following also applies to the 12M bus terminal

- Unique localization of faulty termination within a segment (the incoming and outgoing bus cables are cut for inserting the resistor combinations)
- When the 12M bus terminal is used in a segment with RS 485 bus terminals, the configuration rules for the RS 485 bus terminal apply (see manual for PROFIBUS networks).

e.g. SIMATIC S7-300 with communications processor

PROFIBUS
Electrical networks (RS485)

Active RS 485 terminating element

Overview

- Terminates bus segments at data transmission rates of 9.6 kbit/s to 12 Mbit/s
- Power supply independent of bus stations.

Designed for Industry

- Terminal-independent bus termination through onboard power supply

Application

The active RS 485 terminating resistance is used to terminate bus segments. Power supply is independent of the stations. The terminating resistor is supplied with power separately from the other I/O components, either permanently or with a voltage applied ahead of the I/Os. By terminating the bus system the stations (e.g. ET 200S) can be coupled and decoupled selectively without malfunctions.

Design

- 1 terminal block for the segment connection
- Terminal block for power supply (24 V DC external)

Function

The active RS 485 terminating element terminates the PROFIBUS and therefore ensures a defined level of the RS 485 signal and suppression of reflections on the line. Since it is operated independently of the field devices, they can be decoupled from the bus without reactions.

Technical specifications

	6ES7 972-0DA00-0AA0
General information	
• 24 V DC	Yes
• permissible range, lower limit (DC)	20.4 V
• permissible range, upper limit (DC)	28.8 V
Current consumption, typ.	30 mA
Bus cables	Screw terminal block

Active RS 485 terminating element for PROFIBUS For terminating bus segments for data transmission rates of 9.6 kbit/s to 12 Mbit/s	**6ES7 972-0DA00-0AA0**

3

Overview

- Automatic data transmission rate search
- Data transmission rate of 45.45 kbit/s possible
- 24 V DC voltage display
- Display bus activity segment 1 and 2
- Isolation of segment 1 and 2 possible by switch
- Isolation of the right segment part when terminating resistor is inserted
- Decoupling of segment 1 and segment 2 in the event of static interference

Designed for Industry

- To increase the number of stations and the expansion
- Galvanic isolation of segments
- Startup assistance
  - switch for disconnecting segments
  - display of bus activity
  - isolation of segment with incorrectly inserted terminating resistor

Please also have a look at the diagnostics repeater which in addition to the normal repeater functionality also has comprehensive diagnostics functions for physical line diagnosis.
It is described under "Distributed I/O/Diagnostics/Diagnostics repeater for PROFIBUS DP".

Application

The RS 485 IP20 repeater connects two PROFIBUS or MPI bus segments using the RS 485 system with up to 32 stations. Data transmission rates of 9.6 kbit/s to 12 Mbit/s are then possible.

Design

- Housing to degree of protection IP20.
- 2 terminal blocks for connecting the segment
- Terminal block for supply voltage (24 V DC external).
- PG/OP interface.

Function

Mode of operation

- Increasing the number of stations (max. 127) and the expansion
- Regenerating the signals in amplitude and time
- Electrical isolation of the connected bus systems

Data transmission rate	Max. segment length
9.6 kbit/s	1000 m
19.2 kbit/s	1000 m
45.45 kbit/s	1000 m
93.75 kbit/s	1000 m

Power Rail Booster

Overview

- The device for low-cost PROFIBUS DP transfer over contact conductors and slip rings to degree of protection IP20
- Permissible baud rates from 9600 bit/s to 500 kbit/s, self-optimizing
- Permissible busbar length:
  From 25 m at 500 kbit/s to 1200 m at 9600 bit/s
- Configuring with PRB Checker software
- Up to 125 nodes per segment
- Transparent for data communication:
  The power rail booster does not reserve DP addresses
- Easy to install due to connection without terminating resistor and filter element
- Diagnostics LED for power supply, bus activity and group errors
- Isolated electronic changeover contact for external group error display or diagnostic alarm
- Uninterruptible communication beyond segment limits using the "PRB segment controller"

Application

The power rail booster supports connection of a PROFIBUS DP through a contact wire, such as can be implemented on monorail conveyors or high-bay storage and retrieval systems, thus ensuring continued use of the wide range of PROFIBUS DP system services, such as diagnostics and PROFIsafe safety engineering through a bus.

Monorail conveyors

Vehicle control for monorail conveyors can be achieved cost-effectively with a concept based on SIMATIC standard components. High availability, short response times and easy expansion can be achieved by using distributed controllers, such as SIMATIC ET 200S with IM 151-7 CPU. These can also be programmed by the user with SIMATIC STEP 7 via the contact wires.

High-bay storage and retrieval systems

The maintenance-hungry data photoelectric barriers used in high-bay storage and retrieval systems can be replaced, thus increasing plant availability.

Applications with slip rings

The power rail booster enables cost-effective routing of PROFIBUS DP through rotating axes even in the case of large diameters.

Design

The power rail booster can be snapped on to a 15 mm or a 7.5 mm standard DIN rail.

Function

How it works

- For safe data transmission of the PROFIBUS DP signals via the contact conductors, the signal levels are raised to an interference-immune level and injected into the contact conductors.

Manual and configuring

The manual for the Power Rail Booster can be downloaded from the Internet in English, German and French. The "PRB Checker" software tool for easy configuration of contact conductor networks is available for downloading.

Technical specifications

Degree of protection	IP20
Dimensions (W x H x D, with connector) in mm	90 x 132 x 75
Supply voltage	24 V DC
Power consumption	max. 20 W
Data transmission rate, max.	500 kbit/s, self-adjusting
Cable length (depends on baud rate), max.	1200 m
Shock-hazard protected voltage	Yes, to EN 61131-2
Stations per PRB segment, max.	125
Operation without terminating resistance	Yes
Operation without filter	Yes
Wiring options: Line / star	Yes / Yes

PROFIBUS
Electrical networks (PROFIBUS PA)

Introduction

Overview

Direct interfacing of the devices in the field, especially in the hazardous area, together with the information content of the communication, are of significant importance in the process industry. PROFIBUS PA, which permits both digital data transmission and the power supply on a two-wire line with the intrinsically-safe MBP transmission technology (Manchester Coded; Bus Powered) is tailored to these requirements.
It is optimally suitable for direct integration of solenoid valves, sensors, and pneumatic actuators positioned in operating environments up to Ex zone 1/21 or 0/20 into the process control system.

The typical response time of a transmitter of approx. 10 ms indicates that short cycle times can be achieved with the PROFIBUS PA even in the case of a segment configuration with up to 31 devices. Practically all typical applications of the process industry can be implemented, both in small and large plants. Bidirectional communication and high information content allow enhanced diagnostics for fast and exact fault detection and elimination. The standardized communications services guarantee interoperability and replaceability between multi-vendor field devices and remote parameterization of the field devices during operation.

Safety communication with the PROFIsafe profile

The PROFIsafe profile allows seamless integration of safety communication into the PROFIBUS PA. You need not configure a separate safety bus for your safety-related applications.
The PROFIBUS PA with the PROFIsafe profile is incorporated in "Safety Integrated for Process Automation". This comprehensive range of products and services from Siemens for failsafe, fault-tolerant applications in the process industry offers you attractive and cost-effective alternatives to separate safety systems.

Redundant architectures

You can define the degree of redundancy separately for the controller, fieldbus and I/O levels of your plant depending on the automation task and the derived safety requirements, and match them to the field instrumentation (Flexible Modular Redundancy, FMR). You can find an overview of the redundant architectures of PROFIBUS PA under "Design".

Network transition PROFIBUS PA to PROFIBUS DP

The PA link is preferred as the gateway from PROFIBUS PA to PROFIBUS DP. When using the PA link, the transmission rate on the PROFIBUS DP is independent of the subordinate PROFIBUS PA segments. The configuration of the PA link depends on the fieldbus architecture. The types of coupler described in the section "PA routers" can be used for the configuration. With a small amount of data (small quantity framework) and low timing requirements, the DP/PA coupler can also be operated in stand-alone mode as a gateway.

Benefits

Advantages provided by distributed field automation with application of the PROFIBUS PA profile included low hardware overhead, cost-effective engineering, increased operational safety and problem-free maintenance. These advantages are underlined by the following features:

- Modularity and uniformity from the sensor up to the control level permit new plant concepts
- Implementation of intrinsically-safe applications through use of the fieldbus in hazardous areas
- Redundant PROFIBUS PA architectures (ring and line topologies with coupler redundancy) support Flexible Modular Redundancy (FMR) from the automation system (controller) down to a PA field device
- Safety-related and fault-tolerant applications with low device and cabling requirements
- Reduced configuration costs through simple, central engineering of the field devices (PROFIBUS PA and HART with SIMATIC PDM, also cross-vendor)
- Simple installation using two wire cable for common power supply and data transmission
- Reduced commissioning costs through simplified loop check
- Low servicing costs thanks to simple wiring and comprehensive diagnostics facilities

3

■ **Design**

Basic PROFIBUS PA design versions when using the PA link as the PA network transition

Basic PROFIBUS PA design versions are shown at this point. The PA link is used as the PA router in these configuration examples.

However, the PA router can only be implemented per DP/PA coupler. The PROFIBUS DP connection is then directly on the coupler instead of per interface module.

The number of PROFIBUS PA devices is limited according to the specifications in section "Technical data".

Line architecture with single coupler

Max. 5 PROFIBUS PA lines (line segments) can be operated via single couplers (max. 3 for mixed configurations with ring or coupler redundancy) on a PA link as PA router, equipped with up to 5 DP/PA couplers.

In the line architecture with individual couplers, each line segment is connected to one DP/PA coupler of the PA router. The PA router can be connected to a single or redundant PROFIBUS DP.

The FDC 157-0 the first choice as the DP/PA coupler. When using this coupler, the PA devices can be integrated into the line segment via active field distributors AFD (approval for Ex zone 2/22) or AFDiS (approval for Ex zone 1/21). The PA devices are connected to these field distributors via short-circuit-proof spur lines.

Up to 8 field distributors of type AFD, up to 5 field distributors of type AFDiS, or up to 5 field distributors of both types in any mix can be operated as alternatives in a line segment. The last field distributor at the end of the line leading away from the DP/PA coupler automatically activates its bus terminating resistor.

Intrinsically-safe PA devices in hazardous areas in accordance with Ex zone 1/21 or 0/20 are primarily integrated into a bus segment by means of active field distributors AFDiS. For PA devices in Ex zone 1/21, the connection via a line segment on the PA router with DP/PA coupler Ex [i] is a possible alternative. The devices are integrated separately into the line segment via SplitConnect Taps (via spur line or directly via SplitConnect M12 outlet). A SplitConnect terminator is required for the bus termination of the segment.

By grouping individual devices in different line segments, Flexible Modular Redundancy is possible at device level.

Line architecture with redundant coupler

The PA link operable as a PA router on a single or redundant PROFIBUS DP can only be equipped with one redundant DP/PA coupler pair. This can be used either for a line architecture with Active Field Splitter (AFS) or for a ring architecture.

In the line architecture, the AFS is connected to the redundant DP/PA coupler pair (2 x FDC 157-0) in the PA router. It connects the line segment connected to it to the active of the two redundant DP/PA couplers. A DP/PA coupler can be replaced without interrupting the ongoing operation.

The PA devices are integrated into the line segment as in the line architecture with individual couplers via active field distributors AFD/AFDiS. The limits with regard to the number of field distributors are also identical (up to 8 AFD, up to 5 AFDiS or up to 5 AFD/AFDiS in any combination).

PROFIBUS
Electrical networks (PROFIBUS PA)

Introduction

3

Design (continued)

Ring architecture with coupler and media redundancy

With the redundant DP/PA coupler pair (2 x FDC 157-0) of a PA router, a ring segment with automatic bus termination can also be implemented instead of a line segment with AFS. Apart from the ring segment, only line segments with individual couplers can be configured on this PA router. The PA router can be connected to a single or a redundant PROFIBUS DP.

Integration of the PA field devices into the ring segment is carried out via active field distributors AFD or AFDiS whose number is limited as with the line architectures (up to 8 AFD, up to 5 AFDiS or up to 5 AFD/AFDiS in any combination). These field distributors have electrically decoupled, short-circuit-proof spur line connections for connecting the PA devices.

At the device level, flexible modular redundancy is possible by grouping individual devices on different field distributors.

Special advantages of the ring architecture:

- High availability
- Transparent redundancy management of the intelligent DP/PA couplers FDC 157-0 for the host system
- Active bus terminators for automatic bus termination in the DP/PA couplers FDC 157-0 and the AFDs permit:
  - Automatic, smooth isolation of faulty subsegments in the event of a short-circuit or open-circuit
  - Modification of the ring configuration or instrumentation during operation, including the addition or removal of ring segments
- Safety-related and fault-tolerant applications with low device and cabling requirements

Cable lengths of bus segments and spur lines

The PROFIBUS PA is based on electrical transmission components. A shielded two-wire cable is used for digital data transmission and for the power supply of the field devices.

With line, tree and ring topologies, bus segments up to approx. 1.9 km can be configured. If AFDs are used, the length of the spur lines for connecting devices and the quality of the cable used must also be considered when calculating the total length of the bus segment. Spur lines on the AFDiS are not relevant to the total length of the bus segment.

The length for spur lines is as follows with bus segments with active field distributors AFD/AFDiS:

- Up to 120 m in accordance with IEC 61158-2
- Up to 60 m in accordance with IEC 60079-27 (FISCO)

With active field distributors AFD, these maximum values may be reduced depending on the number of spur lines of the bus segment (for details, see Section "Technical data"). With active field distributors AFDiS, this reduction is canceled by the integrated repeater function.

Intrinsically-safe PA devices in hazardous areas are preferably integrated into a bus segment by means of active field distributors AFDiS. For PA devices in Ex zone 1/21, the connection via a line segment on the PA router with DP/PA coupler Ex [i] is a possible alternative. In such a configuration the max. possible length per spur line is reduced to 30 m and per bus segment to 1 km.

Bus segments are terminated either automatically (with architectures with active field distributors AFD/AFDiS) or with the passive terminating element for PROFIBUS PA (SpliTConnect terminator).

Technical specifications

PROFIBUS PA

Data transmission	MBP
Transmission rate	31.25 kbit/s
Cable	2-wire shielded
Type of protection	EEx(ia/ib)
Topology	Line, tree, ring

Cable length per segment, dependent on transmission rate	1 900 m: standard 1 900 m: EEx(ib) 1 000 m: EEx(ia)

Bus segments with AFD

Max. spur line length related to the total number of spur lines

Number of spur lines (1 device per spur line)

• 1 to 12 spur lines	120 m
• 13 to 14 spur lines	90 m
• 15 to 18 spur lines	60 m
• 19 to 24 spur lines	30 m
• 25 to 31 spur lines	1 m

Bus segments with AFDiS

Max. spur line length independent of total number of spur lines

Number of spur lines (1 device per spur line)

• 1 to 31 spur lines	
- Not intrinsically-safe	120 m
- Intrinsically-safe acc. to FISCO	60 m

Overview

- Used for constructing fieldbus segments as per IEC 61158-2 (e.g. PROFIBUS PA) with field device interface points
- Easy assembly of the bus cable thanks to the FastConnect system (FastConnect stripping tool, FC process cable compliant with IEC 61158-2)
- The terminal devices can be connected using the FC Process Cable in accordance with IEC 61158-2 or the SpliTConnect M12 Outlet/M12 Jack
- Combination of terminating resistors can be integrated (SpliTConnect terminator)

Application

- The SpliTConnect Tap enables the design of fieldbus segments according to IEC 61158-2 (e.g. PROFIBUS PA) with terminal device connection points.
- The SpliTConnect Coupler can be used to construct a PROFIBUS PA hub by connecting SpliTConnect Taps in series.

- By replacing the contacting screw with the SpliTConnect terminator, the SpliTConnect tap can be used as a bus terminating element.

Benefits

get **get** Designed for Industry

- Easy connection of terminals due to use of the FastConnect system
- Wide variety of applications thanks to modular SpliTConnect system
- Reduction in number of types and parts thanks to uniform connection system for PROFIBUS PA

PROFIBUS
Electrical networks (PROFIBUS PA)

Bus cables

■ Overview

- Bus cable for fieldbus systems according to IEC 61158-2, e.g. PROFIBUS PA
- High interference immunity thanks to double shielding
- Different variants for different applications (hazardous areas, non-hazardous areas)
- Easy length measurement thanks to printed meter markings

■ Benefits

g e**get** Designed for Industry

- Length can easily be determined due to meter length markings printed on the cable
- Complete range of cables for hazardous and non-hazardous areas
- Reduction of types and parts thanks to a uniform connection system for PROFIBUS PA

■ Application

For the construction of fieldbus networks according to IEC 61158-2 (for example PROFIBUS PA), different color-coded cable types are available for the different types of applications (hazardous, non-hazardous areas).

UL approvals

Different cable variants are offered with appropriate UL approvals for laying in cable bundles and cable racks according to the specifications of NEC (National Electrical Code) Article 800/725.

■ Design

- Shielded, twisted-pair cable with circular cross-section
- System-wide grounding concept can be implemented using the external shield of the bus cable and the grounding terminals of the SpliTConnect system.
- Printed meter marks.

Cable types

- FC Process Cable:
  Special bus cable compliant with IEC 61158-2 for use in hazardous (Ex) and non-hazardous (non-Ex) areas.
- Bus segments with RS485 and IEC 61158-2 transmission procedures are linked by means of the segment coupler/link.

More information

Installation instruction

FastConnect

The FastConnect stripping tool can be used to strip the outer sheath and shield of the FC Process Cable to the required lengths for PROFIBUS PA.

Thus the use of the FastConnect stripping tool and SpliTConnect tap permits the easy connection of field devices to, for example, the PROFIBUS PA bus system.

Cable routing

During storage, transport and cable laying, keep both ends sealed with a shrink-on cap.

Comply with the permissible bending radii and tensile load!

Note:
You can order components supplementary to the SIMATIC NET cabling system from your local contact.

Overview

Active field distributor AFD

The active field distributor (AFD) can be operated in environments in accordance with Ex zone 2/22. It can integrate up to 4 PA (PROFIBUS PA) or FF (FOUNDATION Fieldbus H1) field devices via short-circuit-proof spur line connections into a fieldbus segment (line/ring) with automatic bus termination. This fieldbus segment can be connected to a single or redundant PROFIBUS DP via a PA or FF router and it can thus be seamlessly integrated into the SIMATIC PCS 7 process control system.

Up to 8 active field distributors AFD with a total of up to 31 connected field devices can be operated per fieldbus segment. The number of field devices is also limited by the current consumption of the field devices. A current of 1 A is available for all field devices of a segment.

An AFD in a ring segment can be replaced during operation without failure of the segment.

For compliance with IP65 protection, it is necessary to protect unused spur line connections by plugs.

Active field distributor AFDiS

The active field distributor AFDiS (Active Field Distributor intrinsic Safety) can be operated in environments in accordance with Ex zone 1/21 and 2/22. It can integrate up to 6 intrinsically-safe PA (PROFIBUS PA) or FF (FOUNDATION Fieldbus H1) field devices into a fieldbus segment (line/ring) via its intrinsically-safe, short-circuit-proof spur line connections. Instead of the spur line, it is also possible to use a subsegment for 3 to 4 devices with a max. length of 500 m at connection S1 of the AFDiS. The spur lines with type of protection Ex [ia] as well as the subsegment can be routed into Zone 0/20.

Up to 5 field distributors AFDiS with a total of up to 31 field devices can be operated in a fieldbus segment. The limitation to 5 field distributors is also mandatory for mixed operation of AFD and AFDiS.

The number of field devices per segment additionally depends on the current consumption of the devices. A current of 1 A is available for all field devices of the segment.

With the integrated repeater function, the AFDiS has the following advantages compared to the AFD:

- Spur line lengths are independent of the total number of spur lines in the bus segment
- Spur line lengths need not be be taken into account when determining the total length of the bus segment

Under the following conditions, an AFDiS in a ring segment can be replaced during operation without failure of the segment: Installation in zone 2/22; no mixed operation with AFD.

For compliance with IP66 protection, it is necessary to protect unused spur line connections by plugs.

Active field splitter AFS

The active field splitter (AFS) connects a PA or FF line segment with a redundant coupler pair of a PA or FF router. The AFS interconnects the line segment with the respective active coupler.

To guarantee IP65 protection, it is necessary to protect an unused connection by a plug.

Dimensions (W x H x D) in mm	175 x 57 x 105; with screw gland 175 x 57 x 105
Weight	Approx. 700 g

Active field distributor AFDiS

General data

Connection of field devices	• Standard-compliant field devices for PROFIBUS PA or FOUNDATION Fieldbus H1 • Max. 6 per AFD • Max. 31 per fieldbus segment • Operating environment up to zone 1 or 21 • The max. current consumption of all field devices of the fieldbus segment is 1 A
Degree of protection	IP66

Voltages, currents, potentials

Power supply	Via bus, no auxiliary power necessary
Rated supply voltage, permissible range	16 ... 32 V DC
Polarity reversal protection (only in connection with DP/PA coupler)	Yes; up to 1 A
Overvoltage protection	No
Current consumption	
• At 28 V input voltage	$\leq$ 64 mA + (0.838 * aggregate current of all the field devices)
• At 24 V input voltage	$\leq$ 67 mA + (1.008 * aggregate current of all the field devices)
• At 20 V input voltage	$\leq$ 74 mA + (1.246 * aggregate current of all the field devices)
Power loss	Min. 1.4 W; max. 5.9 W
Grounding	Direct, via connecting bar
Electrical isolation between main line and spur lines	Yes
Test voltage	2 550 V DC, 2 s

Connections, interfaces

Main line	
Number of connections	2
Interfaces	PROFIBUS PA and FOUNDATION Fieldbus H1
Automatic bus terminator	Yes
Spur cables	
Number of connections	6
Short-circuit-proof	Yes
Intrinsically-safe acc. to FISCO	Yes
Current I_{max} on spur line S1	60 mA
Current I_{max} on spur lines S2 to S6	40 mA
Current I_{max} in total for all field devices	180 mA
Short-circuit current (test current)	5 mA
Debounce logic	Yes
No-load voltage	Max. 15.3 V
Current output to field devices	Max. 260 mA

3

Technical specifications (continued)

Active field distributor AFDiS (continued)

Status, interrupts, diagnostics

Status display	Yes
Diagnostics function	Yes
Diagnostic indicator LED	Yes

Climatic conditions

Permissible operating temperature	-40 ... +70 °C
Permissible storage/transport temperature	-40 ... +85 °C
Relative humidity during operation	Max. 95 %

Approvals for potentially explosive atmospheres

• Gas	Zone 1 and Zone 2
• Dust	Zone 21 and Zone 22

Dimensions and weight

Dimensions (W x H x D) in mm	380 x 85 x 170
Weight	approx. 4 500 g

Active field splitter AFS

General data

Connection of field devices	• Max. 31 per fieldbus segment • Operating environment up to zone 2 or 22 • The max. current consumption of all field devices of the fieldbus segment is 1 A
Degree of protection	IP65

Voltages, currents, potentials

Rated supply voltage	16 V DC (16 ... 32 V)
Reverse polarity protection	Yes
Overvoltage protection	Yes
Voltage failure bridging	5 ms
Current consumption	≤ 25 mA
Power loss	Max. 1 W
Output current for supplying all field devices of the fieldbus segment (for dimensioning the device configuration)	1 A

Status, interrupts, diagnostics

Diagnostic displays:	
• Status main line PA1, PA2	Green LED
• Fault main line PA1, PA2	Red LED

Climatic conditions

Permissible operating temperature	-25 ... +70 °C

Dimensions and weight

Dimensions (W x H x D) in mm	125 x 57 x 80; with screw gland 175 x 57 x 105
Weight	approx. 700 g

Profile rail adapter for mounting an active field distributor AFD or AFS on a mounting rail, optional	**6ES7 157-0AF83-0XA0**
Cable gland for active field splitter AFS	Can be ordered from: Jacob GmbH www.jacob-gmbh.de Order No. 50.616 M/EMV
Fastener for HSK-Ex standard cable glands For use as plugs for unused connections on AFD and AFS	Can be ordered from: Hummel elektrotechnik GmbH www.hummel-group.com Order No. 1.296.0901.11
Sealing plugs for unused connections on AFDiS (10 units)	**6ES7 157-0AG80-1XA1**

PROFIBUS
Electrical networks (FOUNDATION Fieldbus)

Bus cables

Overview

- Bus cable for fieldbus systems according to IEC 61158-2, e.g. FOUNDATION Fieldbus
- High noise immunity due to double shielding
- Different variants for different applications (hazardous, non-hazardous)

Benefits

get — Designed for Industry

- Easy length measurement with printed meter markers
- Reduction in number of types and parts thanks to uniform connection system for FOUNDATION Fieldbus
- Cable design with shield wire for easy shield contact at the end device

Application

For setting up fieldbus networks according to IEC 61158-2 (e.g. FOUNDATION Fieldbus), different color-coded cable types are available to suit different types of applications (hazardous, non-hazardous areas).

UL approvals

Cable variants are available with appropriate UL approvals for laying in cable bundles and cable racks according to the specifications of NEC (National Electrical Code) Article 800/725.

Design

- Shielded, twisted-pair cable with circular cross-section
- Integrated grounding concept can be achieved with the outer shield of the bus cable
- Printed meter marks.

Cable types

- FOUNDATION Fieldbus cable:
  Special bus cable compliant with IEC 61158-2 for use in hazardous and non-hazardous areas.
- Bus segments with RS485 and IEC 61158-2 transmission procedures are linked by the segment SIMATIC FF Link.

Overview

- Simple on-site assembly of glass FOC in the field
- Optical signal transmission
- No radiation emission from the cable
- Unaffected by external noise fields
- No grounding problems
- Electrical isolation
- Low weight
- Simple laying of cables

Design

Fiber-optic cables with glass core (62.5/200/230) are offered for the FastConnect fiber-optic cable system:

- FC glass fiber-optic cable;
  duplex cable for indoor and outdoor fiber-optic networks

The fiber structure corresponds to that of the PCF. This allows simple assembly on site.

Sheath material	Application
PVC	Standard use in indoor and outdoor areas of industrial applications
PUR	Highly mobile applications (tow chains) for high mechanical or chemical stress in harsh industrial environments
PE	Routing of cables in moist areas indoors and outdoors, and for direct burying in earth
FRNC	Standard applications with high fire protection requirements

Approvals

UL listing (safety standard) for network lines is especially necessary for the American and Canadian markets. The requirements for the appropriate approvals depend on where the cable is routed within the building. This applies to all cables which have to be routed from a machine to a remote control cabinet and are positioned on cable racks secured in the building. These cables are identified by the suffix "GP" (general purpose) in the product name and have the corresponding UL approvals.

Overview of FC-FOCs

Application

The fiber-optic cable (FOC) is used for the transmission of signals in very extensive plants and where there are significant potential differences within a plant. The light beam is guided by total reflection at the transition from core to cladding which has a lower refractive index than the core.

The FastConnect fiber-optic (FC FO) system enables fast on-site assembly of glass fiber-optic cables with the right lengths to suit the respective application.

Assembly with FastConnect for glass fiber-optic cables

Steps for assembly of PROFIBUS fiber-optic cables with PROFIBUS FastConnect

Overview

- FastConnect standard fiber-optic cable for use in optical Industrial Ethernet and PROFIBUS networks
- For all users who want to install and assemble the glass fiber-optic cables themselves over longer distances on site for office or industrial applications.
- Simple FastConnect SC/BFOC connector assembly on site
- Rugged construction for industrial applications both indoors and outdoors
- High interference immunity, as they are not sensitive to electromagnetic interference
- Extensive range of approvals (UL approvals)

Benefits

get Designed for Industry

- Avoidance of excessive cable lengths in the control cabinet, as the fiber-optic cables can be assembled to the right length on site
- Easy installation of cables in buildings, as cables can be pulled in without connectors attached
- Simple extension of installed glass fiber-optic cables via SC and BFOC couplers
- Devices with different connection method (SC or BFOC) can easily be connected to one another using self-assembled adapter cables
- Electrical isolation of Industrial Ethernet/PROFINET/ PROFIBUS devices
- Unaffected by electromagnetic interference
- Tap-proof: no radiation from cable

Application

SIMATIC NET FastConnect glass fiber-optic cables are used to construct optical indoor and outdoor Industrial Ethernet/ PROFINET and PROFIBUS networks. Devices with integral optical interface (SC or BFOC connection technology) are, for example, optical link modules (OLM) and SCALANCE X Industrial Ethernet switches.

FastConnect glass fiber-optic cables are to be assembled on site using FastConnect SC or FastConnect BFOC connectors. A corresponding assembly kit (FC FO Termination Kit) is available for this purpose. The Termination Kit permits the stripping and the "cleaving" of the fiber in the assembled connector, as is familiar from PCF fiber-optic cables. To extend existing lines, a BFOC or SC coupler may be used depending on the connection technology.

Design

FC FO Standard Cable GP (General Purpose)
rugged round cable with green outer sheath, Kevlar strain relief elements, and 62.5/200/230 FC FO fibers for indoor/outdoor applications

FC FO Trailing Cable
rugged round cable with green outer sheath, Kevlar strain relief elements and 62.5/200/230 FC FO fibers for use in tow chains and moving applications

Maximum cable length between two devices:

- 3000 m for 100 Mbit/s Ethernet or for PROFIBUS
- 350 m for 1000 Mbit/s Ethernet (1000Base-SX)
- 550 m for 1000 Mbit/s Ethernet (1000Base-LX)

The maximum cable lengths can be assembled from partial lengths using FastConnect couplings (SC or BFOC; maximum two couplings, approx. 2.5 dB attenuation per coupling). It is also possible to combine existing installed, conventional 62.5/125 µm multimode glass fiber-optic cable sections with the FastConnect fiber-optic cables.

FC FO termination kit

■ Overview

- Compact, rugged assembly case for FastConnect glass fiber-optic cables
- Simple fitting of SC and BFOC connectors to FastConnect glass fiber-optic cables
- The quality of the assembly can be checked using the enclosed microscope

■ Benefits

get   Designed for Industry

- Simple installation of the unassembled cable
- Flexible connector assembly possible on site (SC/BFOC connectors)
- Prevention of faults by simply checking the assembled connectors using a microscope
- Simple repair of FC glass fiber-optic cables in the field

■ Application

SIMATIC NET FC glass fiber-optic cables are used to construct optical indoor and outdoor Industrial Ethernet/PROFINET and PROFIBUS networks. They are easy to assemble on-site using the termination kit with SC or BFOC connectors. The maximum cable length between two Industrial Ethernet/PROFINET or PROFIBUS devices is 3000 m in the case of 100 Mbit/s Ethernet or PROFIBUS.

■ Design

Cable construction FC glass optical fiber

The kit is available in an assembly case for on-site installation of FC SC and FC BFOC connectors on FC glass fiber-optic cables.

It consists of a stripping tool, buffer stripping tool, Kevlar scissors, fiber breaking tool and microscope.

■ Overview

- Used for the optical Industrial Ethernet and PROFIBUS networks
- Rugged design for industrial applications indoors and outdoors
- Halogen-free design for installation inside buildings
- Trailing cable for the special application of forced motion control
- High immunity to noise thanks to insensitivity to electro-magnetic fields
- Available preassembled
- Extensive approvals (UL)

■ Benefits

get Designed for Industry

- Easy to lay with
  - preassembled cables
  - no grounding problems
  - very light fiber optic cable.
- Tap-proof,
  no radiation from the cable
- Silicon-free,
  therefore suitable for use in the automotive industry
  (e.g. in paint shops)
- Avoidance of overvoltage and equipotential bonding problems

■ Application

Marine duplex fiber-optic cable SIENOPYR

Halogen-free, non-crush, flame-retardant, marine-approved fiber-optic cable for permanent installation on ships and on offshore platforms indoors and on open deck. Sold by the meter.

Fiber-optic indoor cable

Halogen-free fiber-optic cable, non-crush, flame-retardant, for installation inside buildings (e.g. in production halls and in building automation). Supplied in fixed lengths, pre-assembled with 4 BFOC connectors.

Standard FOC/FRNC cable

Fiber-optic cables for the following application areas indoors and outdoors

- For routing above ground
- For installation inside buildings.

Sold by the meter and in fixed lengths, pre-assembled with 4 BFOC connectors.

Fiber-optic trailing cable

Fiber-optic cables for the special application of forced motion control, such as in continuously moving machine parts (in trailing cables) indoors and outdoors. Two cable variants are available for this application:

- FO Trailing Cable;
  Cable for high mechanical stress, PUR outer sheath,
  no UL approval
- FO Trailing Cable GP (general purpose);
  Cable for low mechanical stress, PVC outer sheath,
  with UL approval

Sold by the meter and in fixed lengths, pre-assembled with 4 BFOC connectors.

Fiber-optic outdoor cable

Waterproof cable (lengthwise and sideways) for use outdoors with non-metallic protection against rodents for laying into the ground.

Sold by the meter and in fixed lengths, pre-assembled with 4 BFOC connectors.

Note:
Special tools and specially trained personnel are required for pre-assembling glass fiber-optic cables.

Glass fiber-optic cable

■ Application (continued)
Application Examples

Use of pre-assembled fiber-optic cables with BFOC connectors (12 Mbit/s)

■ Design

In order to span very long distances, the use of singlemode cables with a 9 µm fiber is recommended.

Cable types	50/125 µm	62.5/125 µm	9/125 µm
FO standard cable GP (50/125/1400)	●	–	–
FO FRNC cable (50/125/1400)	●	–	–
FO trailing cable (50/125/1400)	●	–	–
FO trailing cable GP (50/125/1400)	●	–	–
FO ground cable (50/125/1400)	●	–	–
FO robust cable GP (50/125/900)	●	–	–
Fiber-optic standard cable (62.5/125/900)	–	●	–
INDOOR fiber-optic cable (62.5/125/900)	–	●	–
Flexible fiber-optic trailing cable (62.5/125/1400)	–	●	–
SIENOPYR marine duplex fiber-optic cable (62.5/125/900)	–	●	–
FO robust cable GP (4E9/125/900)	–	–	●
